Store Up to 350 Kbytes on a 5" Disk

FORMATTED DISK STORAGE CAPACITY
KBYTES

The DOUBLER™. It packs almost twice the data on a disk track as your single-density system. Depending on the type of drive, you can store up to **four** times more data on one side of a minidiskette than you can store using a standard Model I mini-disk drive.

- The DOUBLER™ reads, writes and formats **either** single- or double-density minidiskettes.
- Proprietary design allows you to continue to run TRSDOS*, NEW-DOS‡, Percom OS-80™ or other single-density software **without making any changes** to software or hardware. Switch to double-density operation at any convenient time.
- Includes DBLDOS™, a TRSDOS* compatible double-density disk operating system.

- CONVERT utility, on DBLDOS™ minidiskette, converts files and programs from single- to double-density or double- to single-density.
- The DOUBLER™ circuit card includes **high performance data separator, write precompensation** circuits for reliable disk read operations — even with 80-track drives.
- **Plug-in Installation** — The DOUBLER simply plugs into the disk controller socket of your Ex-

pansion Interface, requiring no strapping or trace cutting. Expansion Interface disk controller may be completely restored to original configuration by simply removing the DOUBLER™ and re-installing the original disk controller chip.

- Works with standard 35-, 40-, 77- and 80-track mini-disk drives rated for double-density operation.
- Introductory price, including DBLDOS™ and format conversion utility on minidiskette, **only \$219.95**. Use the coupon for even greater savings.

Mini-Disk Systems

More storage capacity, higher reliability — from Percom, the industry leader. One-, two- and three-drive configurations in either 40- or 77-track format. Fully burned-in. From only \$399.

TRS-80* Model I Computer Owners . . .

Double-density storage. It's really here!

Here at Percom. And your authorized Percom dealers.

And double-density storage is here in a big way. Because now you can choose from *three different levels* of mini-disk systems — all *double-density rated*.

And get the storage that precisely meets your application needs.

Not to mention the service and quality that's made Percom the industry leader.

Although rated for double-density operation, all levels of Percom drives *work equally well* in single-density applications.

You can operate these drives in ordinary single-density format using TRSDOS*, Percom OS-80™ or any other single-density operating system.

Or, you can add a Percom DOUBLER™ to your Tandy Expansion Interface and store data and programs in *either* single- or double-density format.

Under double-density operation, you can store as much as **350 Kbytes** of formatted data — depending on the drive model — on one side of a five-inch minidiskette.

That's *four times* the capacity of standard Model I mini-disks, almost **100 Kbytes more** than the capacity of the eight-inch IBM 3740 format!

Available in 1-, 2- and 3-drive configurations In all three model lines, Percom *burned-in, fully-tested* drives start at only \$399.

TFD-40™ Drives

TFD-40 Drives store 180 Kbytes (double-density) or 102 Kbytes (single-density) of formatted data on one side of a 40-track minidiskette. Although economical priced, TFD-40 drives receive the same full Percom quality control measures as TFD-100 and TFD-200 drives.

TFD-100™ Drives

TFD-100 drives are "flippy" drives. You store twice the data per minidiskette by using both sides of the disk. TFD-100 drives store 180 Kbytes (double-density) or 102 Kbytes (single-density) per side. Under double-density operation, you can store a 70-page document on one minidiskette.

TFD-200™ Drives

TFD-200 drives store 350 Kbytes (double-density) or 197 Kbytes (single-density) on one side of a minidiskette. By comparison, 3740-formatted eight-inch disks store only 256 Kbytes. Enormous on-line storage capacity in a 5" drive, plus proven Percom reliability. That's what you get in a TFD-200.

the DOUBLER™

— This proprietary adapter for the TRS 80* Model I computer packs approximately twice the data on a disk track.

Depending on the type of drive, you can store up to four times as much data — 350 Kbytes — on one side of a minidiskette as you can store using a Tandy standard Model I computer drive.

Easy to install, the DOUBLER merely plugs into the disk controller chip socket of your Expansion Interface. No rewiring. No trace cutting.

And because the DOUBLER reads, writes and formats *either* single- or double-density disks, you can continue to run all of your single-density software, then switch to double-density operation at any convenient time.

Included with the PC card adapter is a TRSDOS*-compatible double-density disk operating system, called DBLDOS™, plus a CONVERT utility that converts files and programs from single- to double-density or double- to single-density format.

Each DOUBLER also includes an on-card high-performance data separator circuit which ensures reliable disk read operation.

The DOUBLER works with standard 35-, 40-, 77 and 80-track drives rated for double-density operation.

Note: Opening the Expansion Interface to install the DOUBLER may void Tandy's limited 90-day warranty.

Drive enclosures, power supplies Percom drive enclosures are finished in compatible silver enamel. Three sizes accommodate either 1, 2 or 3 drives. Drive power supplies are heavy duty, cool running open-frame design. Three-wire ac power cords are safer, have lower noise pickup.

Free software patch This software patch, called PATCH PAK™, upgrades TRSDOS* for operation with improved 40- and 77-track drives. For single-density operation only.

Quality Percom products are available at authorized dealers. Call toll free 1-800-527-1592 for the address of your nearest dealer or to order directly from Percom. In Canada call 519-824-7041.

MTC AIDS-III™ *

MODEL I . . . \$69.95

MODEL II . . . \$99.95

Introducing the latest addition to MTC's family of data management systems, AIDS-III NO PROGRAMMING, easy to use. COMPLETE PACKAGE including demonstration application, documentation and MAPS-III (see below).

- Up to 20 USER-DEFINED FIELDS of either numeric or character type.
- CHARACTER-type fields may be any length (total: up to 254 characters)
- NUMERIC-type fields feature automatic formatting, rounding, decimal alignment and validation
- Full feature EDITING when adding or changing records
 - ENTER FIELD (can't type in more characters than specified)
 - BACKSPACE (delete last character typed)
 - DELETE FIELD contents
 - RESTORE FIELD contents
 - RIGHT JUSTIFY FIELD contents
 - SKIP FIELD (to next or previous field)
 - SKIP RECORD (to next or previous record)
- SORTING of records is MACHINE CODE assisted.
 - 200 RECORDS (40 characters) in about 5 SECONDS
 - ANY COMBINATION of fields (including numerics) with each field in ascending or descending order.
- SELECTION of records for Loading, Updating, Deleting, Printing and Saving is MACHINE CODE assisted
 - Specify up to 4 CRITERIA, each using one of 6 RELATIONAL COMPARISONS
 - LOAD or SAVE selected records using MULTIPLE FILES.
- Example: Select records representing those people who live in the state of Colorado, but not in the city of Denver, whose last names begin with "F" and whose incomes exceed \$9000.00
- Example: Select records representing those sales made to XYZ COMPANY that exceed \$25.00, between the dates 03/15 and 04/10

MAPS III (MTC AIDS PRINT SUBSYSTEM), included at no charge, has the following features

- Full AIDS-III SELECTION capabilities
- Prints user-specified fields DOWN THE PAGE
- Prints user-specified fields in titled, columnar REPORT FORMAT, automatically generating column headings, paging and (optionally) indentation
- Can create a single report from MULTIPLE FILES.
- Prints user-defined formats for CUSTOM LABELS, custom forms, etc.

BELOW ARE TESTIMONIALS from owners of AIDS systems. These are absolutely authentic statements and are typical of the comments we receive.

"This program will do more for my business than all the other programs I have, combined."

David Wareham, Vice President (EDP), National Hospital and Health Care Services Inc.

"We have 32 different Data Base Management packages for the TRS-80. AIDS-III is easily the best. It also makes it easier for us to step up to our Model II since the package is available for both computers."

Jack Bilinski, President, 80 Microcomputer Services

"Your AIDS program is far and away the finest information management system that I've ever seen. I am currently using it to maintain a clear picture of the demographic data on all the kids in our residential treatment program and it is working for me superbly."

Frank Boehm, Director, Front Door Residential Treatment Program

- COMPATIBLE with AIDS II data files and AIDS subsystems
- Move up from AIDS II and EXPAND to 20 field capability WITHOUT REENTERING DATA
- AIDS II (Model I or II) owners may UPGRADE FOR ONLY \$25.00

*WARNING: This program is written in BASIC and can be listed in the normal manner. Modification of program code is NOT RECOMMENDED due to its extreme complexity.

MTC AIDS - II™

Ailing information? Doctor it up with AIDS-II. This Automated Information Directory System offers twelve user-defined fields with full feature editing when adding or changing records. Selective Loading, Updating, Deleting, Printing and Saving records may be accomplished using any of six relational comparisons. Also features machine code assisted sorting (200 records in about 5 seconds) by any combination of fields, and much more! Unique "windowing" capability allows directories of unlimited size. Window size is typically 200 or more records in 32K. Can be used for mailing lists, client reference reporting, appointment "calendars", inventory records and other information systems. Easy to use. Defining a system takes about a minute. MAPS-I (MTC AIDS PRINT SUBSYSTEM) is included at no charge. MAPS features full AIDS-II selection capabilities, prints user-specified fields down the page, produces user-specified columnar report formats with automatically generated column headings and paging, and allows user-defined print formats for custom forms, labels, etc. Add subsystems for additional capabilities. May be upgraded to AIDS-III when required.

MTC AIDS-II \$ 49.95

For Model II \$ 79.95

WE GOOFED!

For customer appreciation month in September, MTC offered VERBATIM 5 1/4" diskettes for \$19.80 per box. As part of limiting this offer to one box per customer, we required the inclusion of the actual ad page with each order. While there was a significant response to our offer, a number of individuals expressed considerable irritation at having to deface their magazines. This month heralds the introduction of Meta Tech's PLAIN JANET™ diskettes, The Beautiful Floppy with the Magnetic Personality™. To better promote this fine product and to apologize for any inconvenience or irritation we may have caused, we are offering PLAIN JANET™ diskettes for \$19.80 per box through November 30, 1980. Thank you for your understanding and patience.

80 REMARKS

by Wayne Green

"... the kit was just the start... it was much like buying a car and finding out that the motor is an extra... and the wheels."

The MITS Debacle

A recent letter from an ex-MITS employee confirms what I've heard from many sources—from Ed Roberts himself. I thought you might like the inside information.

The first microcomputer of significance, the Altair 8800, was brought out by a virtually bankrupt firm in Albuquerque, NM. They had been making hand calculators, until low cost calculators from TI and others nearly put them under. In the nick of time the president, Ed Roberts, a computer hobbyist, put an 8080 microcomputer kit on the market selling for under \$400. Of course, what most of the first kit buyers didn't know was that the kit was just the start... It was much like buying a car and finding out that the motor is an extra... and the wheels.

Despite that and other major problems, MITS soon became a very large company, selling over \$5 million in kits in the first year, 1975. In the summer of 1976 Roberts sold the firm to Perdec, a manufacturer of disk drives. Then Perdec began a series of ridiculous business decisions which took MITS from its IBM position in the microcomputer field to a total unknown.

Perdec had a golden opportunity to build MITS into a billion dollar corporation,

but by incredibly poor business decisions—fought every inch of the way by loyal MITS employees and management—they destroyed the firm. First, they stopped development on the Z-80 based CPU. Next, they spurned the hobbyist market which fed the growth of the entire field. Then, they forced dealers to handle only Altair equipment; this lost most of their good dealers. As a small business machine it was terrible because they were unable to provide significant software.

Perdec was eventually bought out by Triumph-Adler, a subsidiary of Volkswagen. The sales of their new system, no longer even S-100 compatible, fell flat and a large portion of their employees were laid off in Albuquerque. Many of the original MITS people left the firm in disgust.

There is so little left by now that if Triumph-Adler wanted to get back into the microcomputer business via Perdec and MITS it would be almost prohibitive. It is really sad to see so many millions of dollars wasted... and the opportunity for making billions squandered.

Tandy Expo

The Radio Shack dealers have been organizing TRS-80 blitzes in major cities. Not long ago they descended on Boston

Photo 3. Chuck Martin of Tufts Electronics was sold on a Model II.

and made quite an impression.

Most of the systems set up for the demonstration were Model II, but they did have one row of Model I systems (on the right). The place was packed. They started out with a film showing how Radio Shack got involved with computers.

In order to get the beginners interested, Tandy started out with all the systems being driven by one host.

After showing how simple it is to write a BASIC program, they turned the comput-

Photo 1. At Tandy's Expo, a film is shown, describing how Radio Shack first entered the computer field.

Meta Technologies strikes again . . . at the competition! These are factory fresh, absolutely first quality (no seconds!) mini-floppies. They are complete with envelopes, labels and write-protect tabs in a shrink-wrapped box.

INTRODUCING PLAIN JANE™ DISKETTES The Beautiful Floppy with the Magnetic Personality™

In 1980 alone, MTC has sold nearly a third of a million dollars worth of brand-name diskettes. If anyone knows quality, we do. And these are quality diskettes. The catch? They are in a plain white box. You're not paying for fancy printing, fancy labels or fancy names on the packaging. We don't even put our own label on the package (labels cost money). At this introductory price (our regular price will be \$21.95 per box of 10) we cannot offer quantity or dealer discounts.

PLAIN JANE™ Diskettes \$19.80*

VERBATIM brand Diskettes (box of 10)

5 1/4-inch (for TRS-80™)
MD525-01 \$23.95

THANK YOU for 1980 . . .

To show our appreciation for a very successful year, thanks to our thousands of satisfied customers, we are offering some great products at prices even lower than our regular low prices. We make an honest effort to deliver the best products at the lowest prices with the fastest service. The confidence you have shown in MTC is recognized and welcomed. Our mothers thank you, our fathers thank you, our children thank you . . . and we thank you.

are loose. Next they examined some useful business programs.

Chuck Martin, the owner of Tuft's Electronic Department Store (in Boston) went with us to see the demonstrations. He was convinced and ordered a Model II. He is using it with the Galactic mailing list program to keep track of customers and send them catalogs.

Tuft's, by the way, is a dealer for Atari and, I believe, Apple. He bought three TRS-80 Model I systems so far and, after trying to use them in his business, sold them off. The Model II seems to be permanent.

Tandy Listing

Radio Shack has recently come out with a 99¢ book which lists programs available for the TRS-80. I view this as a mixed blessing. On the one hand it does provide the TRS-80 owner with a list of available programs, as of a few months ago. But having tested quite a number of these programs, and our lab having tested many more, I would say that the chances of a customer picking a winner from among the listings is very chancy. There are so many really terrible programs out there. It is not a healthy situation.

The TRS-80 owner faces a software jungle. Let me say this... please, please, if you buy some software from any firm, write and let us know what you think of it. Please assist us in helping everyone by naming the poor ones and giving a boost to the good ones. Every firm in the business has a responsibility to put out first-rate software and we'll not be satisfied until we feel we are doing everything possible to make that a fact. This goes for Instant Software too. I want to hear if you get a program you don't think is first-rate.

Meanwhile, if you get that 99¢ book be very careful about where you spend your money.

Warning!

The material in this magazine is designed to be of value to all readers, from rank novice through TRS-80 expert.

80 Microcomputing is intended to be a continuing encyclopedia of TRS-80 information. Thus, if some articles are, for the moment, over your head, have patience... for you'll be very glad to have them later, when you are familiar enough with your TRS-80 to use them. ■

INSIDE 80

by Ed Juge, director of computer merchandising, Tandy Radio Shack

Let's talk about word processing, why and how we did it and what we're doing now.

One of the early assumptions made by Radio Shack regarding the TRS-80 Model I was that small computer demand would be mostly for data processing. Considering the cost of latter quality printers, we didn't think that word processing interest would be significant. You told us early on that we needed to change our thinking.

There were four problems to solve before Model I Scripsit could be readied for the market:

- Come up with a latter quality printer at a price in line with the cost of the computer.
- Implement a quality lowercase video character set.
- Make the lowercase modification easily field installable, and with no holes to drill.
- Find or write a good word processor program.

Unfortunately, finding a reasonably-priced printer and a program turned out to be major problems.

We talked to at least eight potential suppliers, telling them that we intended to retail a printer for \$2,000 or less, without much success. Nevertheless, we finally achieved our goal with a new daisy wheel printer this fall!

The other critical requirement was software. We talked to several word processor authors, but it quickly became apparent that a good software program at a Radio Shack price would require an in-house development effort.

Our design team zeroed in on the needs of the average typist, purposely omitting some of the more advanced word processing features—boldface, underlining and automatic totals. We included specific features, evaluated on their usefulness to the average typist, on the amount of memory overhead and on the time required to develop them. The reviews that Scripsit has received have indicated that we made more right design decisions than wrong ones.

Model II Scripsit—Altogether Different

Model II Scripsit is a page oriented, menu driven word processor. A document can be many pages long, yet there is no need to worry about what fits in the core memory.

The Model II disk contains a specially modified version of TRSDOS. The opening screen is a disk directory showing the name, author, creation and last revision dates, page count, percent of disk space occupied, and other information. At the bottom of the page is a one-line menu giving the operator the option to open, delete, or create a document—or go to a separate disk utilities routine.

Disk utilities include FORMAT, BACKUP, SPOOLING on/off, changing default values for window mode, format lines, paging and print settings, user-defined keys and setting up serial printer output parameters. We've tried to do everything else.

When you're processing text, you're working with one page at a time, so the total document's length is limited only by the disk space available.

The bottom screen lines are reserved. The top line is the format line. It displays margins, tabs, etc. (You can create up to 11 predefined format lines and store them for later use, or you can create and use a temporary line without storing it.)

The bottom line is a prompt/menu line. It normally displays document name, current page number, cursor position (both line number and horizontal position), margins, etc. Information is updated with every character you type.

You have full cursor control, and the use of special commands is made simple through the system of menus. Often used features are accessed through a control key. For example, "get next page," is CTRL-N. If you're a frequent user of some functions we didn't anticipate, take heart! You can define your own special function sequences for CTRL-J, K, O, Y, and Z.

Just Five Keys to Remember!

Model II needs no special key labels. You need remember only five keys: F1—to insert, F2—to delete, ESCAPE—to call the menu or to activate a menu page instruction, BREAK—to cancel an instruction or return you to the previous mode, and HOLD followed by an arrow, homes the cursor to top, bottom, left or right side of the current page.

You can insert new copy or blocks—and even extra pages. You can renumber and resequence the pages, or repaginate

META TECHNOLOGIES

FOR YOUR TRS-80™ DISK SYSTEM

PROGRAMMING TOOLS

TDAM \$19.95
For Model II \$29.95
Includes MTC QUE Card!

Having trouble with RANDOM FILES? With MTC's Table-Driven Access Method (TDAM) you'll never fret over FIELDing again. No knowledge of random access files is required. Insert the TDAM "interpreter" into any BASIC program and type in a few OATA statements describing the information in your files. TDAM does the rest! Reads and writes fields and records of any type (even compresses a DATE field into 3 bytes!). Features automatic file buffer allocation/deallocation, memory buffering, sub-record blocking/deblocking, and handles up to 255 fields per record. Super fast and super simple! Complete with TDAM Interpreter, instructions and demo program. Requires programming experience.

SIFTER \$19.95
For Model II \$29.95

Twelve in-memory high-speed sorts for use in any BASIC program: stable, non-stable, with/without tags, for numeric or string data. Random File Sort included. Some sorts written in machine code. Includes sort subroutines, demo programs and instructions. Relocate as needed with REBUILD. Requires programming experience.

SHRINK \$19.95
For Model II \$29.95

Makes Every Byte Count! Make programs smaller and faster! Combines lines & removes unnecessary code including remarks, without altering program operation. Typically reduces program size 25% to 40%.

SUPERSEDE \$19.95
For Model II \$29.95

A "must have" for the professional programmer or the serious amateur. Probably one of the greatest time-savers available. Write programs in shorthand - change variable names - generate program documentation - use with REBUILD and MINGLE to build new programs from old ones.

MINGLE-II \$19.95
For Model II \$29.95

Merge up to 14 files (Program or Data) into a single file. Data files may be merged in ascending or descending sequence with the ordering based on a user-specified comparison field. A very handy utility for consolidating data files

"OTHER MYSTERIES" VOLUME II

foreword by

H.C. PENNINGTON

Call now and place your order for this new book, "MICROSOFT™ BASIC DECODED & OTHER MYSTERIES for the TRS-80™", from IJG, Inc. A primer for cassette and disk BASIC on the TRS-80™, the information provided applies to similar MICROSOFT™ BASIC interpreters. Features include definition of terms, an overview of BASIC and DOS, explanation of exits, error codes, verb actions, "cold" and "warm" restart procedures and examination of system utilities, arithmetic support and I/O driver routines, and the communications region in RAM. Individual routines are explained in detail, with an index provided for easy access. Appendixes include tables for BASIC and DOS vectors, stacks and interrupt locations, PLUS thousands of comment lines for the complete MICROSOFT™ BASIC

MICROSOFT™ BASIC DECODED \$29.95

The perfect supplement for your NEWDOS, from IJG, Inc.

"TRS-80™ DISK AND OTHER MYSTERIES"

by Harvard C. Pennington

132 pages written in PLAIN ENGLISH packed with HOW TO information with details, examples and in-depth explanations. Recover lost files and directories, remove file protection, make BASIC programs unlistable. How to use SUPERZAP, recover from DOS errors and MORE!

TRS-80™ DISK \$19.95

NEWDOS/80

by Apparat

Apparat's long-awaited successor to NEWDOS+ is here! This is not an enhanced version of NEWDOS, but a completely new product. Simplified DOS commands can be instantly executed from BASIC, even within a program, without disturbing the resident code. System options, such as password protection, number and type of disk drives, BREAK key enable/disable and lowercase modification recognition, can be quickly and easily changed. Five new random-access file types allow record lengths of up to 4096 bytes, and no FIELDing! A powerful CHAIN facility allows keyboard INPUTs to be read from a disk file. An improved RENUMBER facility permits groups of statements to be relocated within program code. Diskettes may even be designated as RUN-ONLY! Features all NEWDOS+ utilities (SUPERZAP 3.0, etc.) and much more! One MTC technical staff member said having NEWDOS/80 is "better than sex" (you'll have to judge for yourself!). Includes 180-page instruction manual and MTC QUE card.

NEWDOS/80 \$149.95

MTC QUE Card only \$7.50

CALL REGARDING OUR NEWDOS+ UPGRADE PRICING.

Complete for Model I with all utilities Plus exclusive MTC QUE card!

NEWDOS + \$69⁹⁵

by Apparat

includes REF, RENUM, SUPERZAP, EDITOR/ASSEM., DISASSEM., DIRCHECK, and more! This is the original NEWDOS with all of Apparat's utility programs. Includes exclusive MTC QUE (Quick User Education) card.

MTC QUE Card only \$1.50

the entire document.

More features of Model II include bold print, centering, interjection with our Profile II software, justification, merging files, password protection on files, text reformatting, global search and replace, vertical or horizontal page formats, serial printer interface block moves or duplication, and user definable defaults for display.

New Low-cost Daisy Wheel Printer

I have mentioned our daisy wheel printer. Actually, it's called Daisy Wheel Printer II. Some of you (and us) remain painfully aware that the DWP I was a fiasco. The product was good, but serious parts and production problems existed which were not cured in time to do any good.

Daisy Wheel II is a 43-character per second, 28-pound powerhouse, which accepts paper up to 16-1/2 inches wide, and makes up to six copies. Take a tip, though, and put it on a separate stand; its fast speed and light weight cause a lot of bouncing around during printing.

DW II underlines and prints boldface when used with the Model II Scripsit. Daisy wheels with a forty-million character life are available in Courier 10-pitch, Prestige Elite 12-pitch, and Madeleine proportional spacing. The carbon ribbon cartridge is good for 200,000 characters. An optional forms tractor is also available.

A unit styled to match your TRS-80, DW II at \$1,960 includes our standard parallel printer interface connection. A separate cable is required to match your TRS-80.

Those Missing Newsletters

There is one question we get with alarming frequency from customers who are justifiably upset: "Why won't you put me on your mailing list for the monthly newsletter?"

I've answered in print many times, but for those who don't know the answer, here it is again:

Our newsletter mailing list is made up of names and addresses sent in by TRS-80 owners on cards we include with every system. *The newsletter is available only to TRS-80 owners.* In lieu of the card, we put anyone on the list who sends in a letter with proof of ownership—serial numbers of the equipment, etc. Those who do not return the card or send a letter are not put on the list.

Some months ago, we mailed a questionnaire to a random sample of about 2,000 people on the newsletter list. A large number wrote back complaining that we could ask for their help, but had steadfastly refused to send them newsletters.

I was personally involved in looking up 50 of these people. Each person was on the list—correctly! The only difference we found was that the newsletter goes out third class, and the questionnaire was mailed first class. Ever since, we've been trying to determine what is causing many TRS-80 owners to miss their newsletter deliveries.

Every phase of newsletter distribution that we can control is being watched closely, and procedures improved. Once the newsletters are in the post office they're out of our hands. Rest assured, we won't give up; please bear with us just a bit longer. And thanks especially to those of you who have maintained your sense of humor through this. ■

EDUCATION 80

by Earl R. Savage

It is all but impossible to operate a multipurpose system without a cassette recorder. It's an integral part of your computer system, even if you have a disk drive. Sooner or later you will be in the market for one.

Maybe your original recorder has broken down or worn out. Maybe you need a second machine just to use with your expansion interface. Then, of course, the most efficient way to make back-up copies of your programs is to use two recorders and some kind of pulse re-shaper. (See TCOPY, 80 Microcomputing, July 1980, p. 160.)

You can go back to Radio Shack for a replacement, but you should know that there are options.

Nothing Special

There seems to be nothing about the TRS-80 cassette recorder that sets it apart. Look around. You may have one around the house that will do the job.

Careful now! I don't mean that you can use any recorder. There are two characteristics the recorder *must* have. First, it must be of a certain quality. You can judge this by playing a pre-recorded music cassette. If the music sounds good, the recorder is probably sufficient.

The second requirement is a low current on/off remote control. If the current is too high, the relay in the 80 will be damaged.

I don't know what the maximum current for the relay contacts is. The CTR-80, however, draws 100 milliamps. Any recorder will be safe if it does not exceed that figure.

How can you know the remote switch current of your recorder? You may find the rating in the shop manual or, perhaps, in the owner's manual. It is easy to determine the current for any recorder with a milliammeter, VOM or similar instrument. Connect the meter, or measuring device

as shown in Fig. 1, and then put the recorder in the play position.

Fig. 1. Measuring Remote On/Off Current

Consider some other useful recorder features, especially if you are buying one.

ALC (Automatic Level Control) or AGC (Automatic Gain Control), are internal circuits which electronically adjust the recording level automatically. ALC makes sure that your CSAVED programs are always at the same level (which surely helps when CLOADing).

To determine if an unmarked machine has this feature, record a soft sound and a loud one without changing the volume control. If both sounds play back at the same volume, you have ALC/AGC.

Another desirable feature is a high-level input. Using a recorder without this requires you to feed your programs through an attenuating network (resistors) into the microphone input jack. Usually the high-level input feature is marked AUXILIARY or AUX.

You will find these additional features useful: a tape counter, rewind and fast forward controls that operate when the remote switch is off, and a monitor switch enabling you to hear the signal when CSAVEing and/or CLOADing.

If you are getting a second machine instead of a replacement, you should consider a cassette player (one which does not record). Players cost less than recorders/players. There is no reason to have two

YOUR MODEL II CAN HAVE SNAPP!

SNAPP II EXTENDED BASIC

A family of enhancements to the Model II BASIC interpreter. Part of the package originated with the best of ALFAGAT, INC.'s thoughts in implementing NEWDOS BASIC. The system is written entirely in machine language for SUPER FAST execution. The extensions are fully integrated into Model II BASIC and require NO user memory, and NO user disk space. The package is made up of the following five modules, each of which may be purchased separately:

REASIC - Six single keystroke commands to list the file, list, previous, next, or current program line, or to edit the current line. Ten single character abbreviations for frequently used commands: AUTO, CLS, DELETE, EDIT, KILL, LIST, MERGE, NEW, LIST and SYSTEM. \$25

REPR - A powerful post-processor facility with output to display and/or printer. Trace is available through the code. Determine easily if it is variable or line. \$40

REXPR - Permits the programmer to display and/or print the value of any or all program variables. Identifies the variable type for all variables. Each element of any array is listed separately. \$40

RENUM - An enhanced program line renumbering facility which allows selection of an upper limit of the block of lines to be renumbered. Supports calculation of renumbered blocks of code, and supports duplication of blocks of code. \$40

REPR - Items quick and easy location of specified strings or keywords within the program. \$30

SAVE - on the purchase of the entire package. \$140

CONVERT

This remarkable utility converts "V" format files (the sequential format used by the SHACKS CODAL and BASIC Compilers) to the "F" format files (the sequential file format used by the BASIC Interpreter and BASCOM) and vice versa. Without this product, programs written for the interpreter will have to be REKEYED to be used by the SHACKS Compiler BASIC. \$75.00

SKRUNCH

A SUPER FAST TRSDOS UTILITY. Compresses your BASIC programs to an absolute minimum. Typically saves 30-40% space, even for programs without REM statements. Also results in 7-10% improvement in execution speed. \$25

SBASIC - Model I and Model II

Program in a high-level, full structured BASIC. The BEST of the BASIC preprocessor, REFORM, named subroutines, CONDITIONAL code, structures, WHILE loops, UNTIL loops, And much more. Forget about line numbers. Model II version is compiled, and SUPER FAST. From Ultimate Computer Systems. Model I \$50

DOSFIX

A collection of patches in TRSDOS and BASIC to enhance their usability and function includes our well-known BREAKER patches to keep the break key from being used accidentally. FREE WITH ANY MODEL II SOFTWARE PACKAGE. Model II \$75

FRIEND FOUR NEW TRSDOS COMMANDS!

SHOW - A much better multi-disk directory display. Let's you see only those files you want and includes date of last update.

MOVE - A much better file copying command. Copy/Move whole groups of files, renaming them in the same time. It deals with just 1 command!

ERASE - Better than KILL, better than PURGE. PRINT - Print BASIC programs from disk, whether saved in ASCII or compressed.

All 4 DOS commands allow fast processing of one or complete groups of files, based on generic naming and wild card specifications. Enhanced functions too numerous to fully describe here.

EXAMPLES

SHOW WAT/DAS*

Directory display of all /DAS files on all diskettes which begin with WAT.

MOVE FAY/DAS:1 TO /OLD:3

Save current versions of control programs to drive 3, changing extensions to /OLD.

MOVE OLD/*/* TO NEW /*/*/*

Copy all files on drive G which begin with OLD, regardless of extension, to drive I, changing the first 3 letters of the filename to NEW. Use retaining the same file extension. Save time!

Reduce frustration!

Eliminate ERROR 331

\$75

HOSTII / TERMII

Allows remote control of a Model II from another Model II, or any ASCII terminal. If terminal type Model II, on-line screen positioning (PRINT @) is fully supported. Requires NO user memory! This system is designed to provide software support to our customer locations without ever leaving the office. \$50

BUGZAP

A powerful utility oriented toward the machine language programmer. Display/Modify/Print/Memory/Disk sectors. Use this to help you learn more about the internals of the Model II. \$50

BUGZAP

MASTER / SLAVE

This software package was designed to support the transferring of files from one Model II to another, via direct connection or modem/phone line connection. All kinds of files and load rates up to 2500 are fully supported. Transfer files in either direction, even with the SLAVE Model II. UNATTENDED! \$150

SPOOLER - Model I and Model II

Out workstation! This package, available for Model I, in the TRSDOS/NEWDOS or NEWDOS/80 versions, or for the Model II, greatly enhances system performance when running typical business applications. Many applications have been benchmarked to run nearly TWICE AS FAST with the SPOOLER installed. Installs in minutes, and no changes are required to your programs. Enhanced Model II versions require NO user memory. Optional features for the Model II version only: Serial printer support, and DISK SPOOLING support. The DISK SPOOLING support is particularly recommended for word processing applications. \$100

SERIAL PRINTER OPTION \$50

DISK SPOOLING OPTION \$50

ROUTE

Routes PRINT data to be sent to the video screen. A great help in writing and debugging programs when no printer is available, you have a slow printer, or you are just in a hurry. Can be turned on and off from within your BASIC program. Requires NO user memory. \$25

SCREEN

Supports the copying of the full video screen to the printer. Can be invoked by the operator with a keyboard key from your program with a keyboard key. Requires NO user memory. \$25

SAVE

Restores the resident BASIC program following an accidental SYSTEM or a system crash. DON'T BE WITHOUT THIS ONE, YOU NEVER KNOW WHEN YOU WILL NEED IT! \$35

TERMS OF SALE:

Each card customer add 3% C.O.D. customers add \$3. Ohio residents add 4.5% sales tax. Shipments normally made the same day we receive your order.

OUR GUARANTEE:

If your diskette arrives damaged, we will replace it without charge. If you ever accidentally damage it, we will replace it for a \$10 handling charge. For a period of one year, we will provide you with any enhancements or updates for a \$10 handling charge. For a period of one year, if errors are discovered in the program, they will be corrected without charge. In the event we cannot correct an error, you may return the program material for a refund.

TRS-II is a trademark of the Radio Shack Division of Farnley Corporation. NEWDOS and NEWDOS/80 are trademarks of Apparat, Inc.

recorders except for interchangeability in case trouble develops with one of them.

In an emergency, if you break down just when you must CLOAD or CSAVE a program with no time to measure remote switch current, use whatever machine you can locate. To avoid the chance of damaging your relay, leave the remote plug unconnected and do the starting and stopping manually.

When you have trouble with your recorder, don't immediately throw it out. Remember: *No cassette recorder/ player will function if it lacks the proper care!*

Care and Feeding of Recorders

The typical audio cassette recorder/ player will take a lot of abuse and still perform its designed function to deliver speeches and good music. After all, our ears are rather forgiving of its small errors.

Our 80s, however, forgive very little. Its audio machine is asked to do a critical job and the 80 expects its digital signals to be very close to the mark. Consequently, the recorder must be kept in top shape.

Most loading problems are caused by dirty recorders.

This is especially true in schools where folks use them in audio service and seldom clean them until they quit. In micro service, recorders must be cleaned regularly.

There are two phases to the cleaning process: magnetic and physical.

First, the physical cleaning.

You can buy a cleaning kit from your local electronics/audio store, but I prefer to get my supplies from the discount drug store. You will need some sticks with cotton-padded ends and some denatured alcohol. Do not attempt to use rubbing alcohol, or any other type of cleaner.

With the cover open and no cassette in

place, put the recorder into play. The front of the cassette compartment will look like Fig. 2. If the recorder has not been cleaned in some time, you are likely to see a tan deposit (oxide from the tape) on all the labeled parts. That's the stuff that causes most of the CSAVE/CLOAD problems!

The first cleaning may take longer than usual because all the oxide must be removed. Work with a cotton swab just moistened with alcohol. Hold the damp swab against the turning pinch roller, away from the capstan. Continue this, renewing the moist cotton until the roller and the capstan are free of oxide. Next, clean the erase and record/play heads by rubbing them with fresh moist cotton swabs.

If you put the swab on the wrong side of the roller, some of the cotton is likely to get wrapped around the capstan. If this happens, put the recorder in "pause" or "stop," and slide the cotton up and off the capstan. Do not use metal, which may scratch the capstan. With the cotton removed, proceed with the cleaning.

Fig. 2. Recorder Parts to be Cleaned

After the physical cleaning, you should clean away residual magnetism from the heads. This requires a head demagnetizer

from the electronics/audio store. Be sure you buy one with a plastic-covered tip because a scratch on the head can be disastrous.

Follow the directions with your demagnetizer—turn it on; bring it to the head; slowly remove it from the head; turn it off. Note: Do not turn off the demagnetizer when it is near the head and do not use it near a program cassette.

This completes the cleaning procedure, unless the cassette compartment has accumulated some dust and lint. If so, some air and a brush with soft bristles should do the trick.

You should clean your recorder after every two or three hours of use. Clean it more often when running new tapes, because more oxide is deposited when tapes are new. A recorder that is cleaned regularly will need only two or three minutes maintenance—that's cheap insurance.

Two other operating procedures will help add life to your recorder. The first is to keep the lid of the cassette compartment closed except when inserting or removing a tape. This will help keep out the dust and lint.

Also, never leave the recorder in play or record unless it is pulling tape.

The rubber pinch roller is pressed tightly against the capstan in those modes. If left in pressure contact when not turning, the pinch roller can be deformed. An out-of-round roller will pull the tape unevenly and you can imagine how that will affect your 80.

With reasonable care, your cassette recorder/player will give long and trouble-free service.

Did you remember to send me information about your instructional program exchange group? If not, this is the last call. ■

Features of the FATIGUE FIGHTER:

- ✓ REDUCES OPERATOR FATIGUE THEREBY ALLOWING MORE EFFICIENT USE OF THE COMPUTER
- ✓ INSTALLS EASILY WITH PRESSURE SENSITIVE ADHESIVE. NO SCREWS, CLIPS, OR DRILLING TO DAMAGE MONITOR

"While I thought the title was great. . . Some of the problems they encountered simply do not exist"

Rites Reservations

This is in regard to an article entitled, "Rites of Passage," appearing in the August 1980 issue of *80 Microcomputing*.

While I thought the title was great, the article showed that the authors had not had much experience with their Model II. Some of the problems they encountered simply do not exist.

As a trusting type of person, I bought one of the first Model IIs, sight unseen, and repeated that performance when the Model IIs came out. So, I probably have had close to the maximum time anyone has had on both machines, outside of Ft. Worth.

The authors refer to the shift-lock as being important in that DOS commands require "all caps." While TRSDOS is fussy—unlike CP/M—and does require all uppercase letters, locking the shift control to uppercase will soon prove to be as much fun as a Cossack charge. The keyboard provides a key entitled CAPS, which does the job much better. Shift-lock will give you A, B, C, D, etc., but it will also give you < for a comma, > for a period, and ! @ # \$, etc., for 1 2 3 4, etc. CAPS will give you what you expect, and still have correct numbers, periods, commas, and the like. If you want an &, for instance, you can shift to uppercase while in CAPS, and automatically return to CAPS after typing the uppercase letters.

While the authors appear to have stumbled across the BUILD command, they must not have used it much. They say to "[go to BASIC] you must go through a pain-in-the-neck sequence: type BASIC, a space, - F (for FILES), and the number of files you want open."

The BUILD command allows you to create TRSDOS files which can be called up and executed by the command DO, with the name of the file you had to BUILD. For example, if an operator always opened three files in BASIC, he could BUILD a file which might have the name, B3, for BASIC, with three files.

The "pain-in-the-neck" would only have to be endured once—to BUILD the file. Once that was resident on the diskette, the operator, to go to BASIC, would only

have to type DO B3. TRSDOS would then execute the file, which would be the TRSDOS command, BASIC - F:3. (The authors forgot to mention the colon). The command could be BASIC - M:24000 (or whatever) which would tell BASIC not to use memory above 24000, in this case. It could be any number up to 32000.

Using BUILD and DO, an operator can set up BUILD files for the usual number of files he assigns, such as B1, B2, B3, etc. The BUILD file can contain a number of commands which will execute in sequence, and with one command, such as DO B3, you can turn the clock on, set the printer parameters, assign the I/O ports, and go to BASIC. Very easy, and no pain-in-the-neck at all.

There is a ROM, contrary to what the authors write, but it only is a power-up ROM, and shuts off after the diskette loads into memory. It does take longer than the Mod I, but having no BASIC on ROM, and the like, allows the Mod II owner to interchange languages very easily.

The authors say, "After paying several thousand dollars, we think the operator is entitled to a few words when the machine runs into an error. But not Tandy: It's back to the manual to find error codes again, just like Level II before DOS." Gentlemen, when the Mod II tells you an error number, such as **ERROR 3**, if you will perform the difficult task of typing ERROR 3, you will have displayed, "PARAMETER ERROR ON CALL." Any error number will be written out by typing back the number. This saves having to read the message, if you already know what error 13 is, for instance. No extra charge—included in the thousands.

They fail to mention the dynamite TERMINAL program which comes with the system, a program from which you can bounce to DOS and back, without losing your connection with the other computer, which allows you to save the incoming information on disk, or to transmit from your disk, or to print and display simultaneously—or not to—or to run information saved on disk from your terminal session—even without being on-line.

Joseph A. Greenleaf
Lyons, MI

Spare Bytes

I have a remark about your program called "Starfighter," August 80, for 4K Level II. I am 11 years old and have a 4K Level II TRS-80. I liked the program and modified it to Level I easily, with more memory left. I did it by using abbreviations and P.AT instead of Print @. It does the same thing with 300 bytes to spare.

Shaun Naubert
West Chester, OH

KBFX and Others

Today I called Tandy's computer hot line with the following problem: When loading programs with the KBFX Keyboard Debounce routine resident in high memory, upon attempting to RUN the program, the entire program would crash, zero all memory and the screen would show MEMORY SIZE?. If I tried to load the Debounce routine after the program was in the computer, the routine canceled all line numbers after 730 and the program still crashed as above when trying to RUN it.

Tandy's explanation for this was as follows: "I saw a memo around here that said the KBFX would only work with our (i.e., Radio Shack's) memory chips. If you're using someone else's chips the KBFX may not work."

I recently bought a 16K upgrade kit from one of your most highly respected advertisers, and I have good reason to believe that all the bytes in these chips are good. Is it possible that the KBFX debounce routine somehow requires chips with a faster access time than those supplied by Godbout and others? Since I have only a vague idea of how KBFX operates—and it seems to me that it works on the keyboard memory, not on the RAM—perhaps some of your readers can save me the hours of labor in disassembling this routine to find out what it does and why, in this case, it isn't doing it!

A final question: I've noticed a BASIC

cont. on page 20

The following letters, critical of Radio Shack's game program Pyramid were forwarded to Radio Shack shortly after their receipt in our offices.

We would have liked some response from Tandy on the authors of Pyramid. Should it be forthcoming, we'll pass it along to you.

Below, find what we hope is at least a balanced "support/rebuttal" of a William O'Brien review that appeared in our August issue.—Eds.

O'Brien Lambasted

Anybody with an attention span as short as William O'Brien's should not be allowed to write software reviews for *80 Microcomputing*. His review of Pyramid in the August issue took me aback.

You're supposed to take forever figuring out the secrets of the pyramid. Who wants to blow 15 bucks on an adventure program that can be solved by any moron in 20 minutes? Once solved, there's not much point in grinding that tape through the player any more.

The next time you write a review for this magazine, Mr. O'Brien, I suggest you evaluate the subject more thoroughly. Diatribes may be fun to write, but they're not very fair.

Jason Spicer
Vancouver, WA

O'Brien Reversed

I have just received my August issue of *80 Microcomputing*. One of the first things I read is the review section, and I must take issue with William O'Brien and his review of Radio Shack's Pyramid game.

I too, feel Radio Shack has missed the boat in many areas of their computer support, but several of my friends and myself have the Pyramid program and have enjoyed hour upon hour of real adventure while figuring out the game. We all have found out how to get past the serpent, catch the elusive bird statue, when to wave the scepter and map out the Pyramid, without calling Texas!

I feel this program is truly a good buy at \$14.95, and an important step in the right direction for Radio Shack. I would like to see Radio Shack get the congratulations they clearly deserve, and encouragement for more efforts towards games of this type. Not criticism by someone who obviously didn't spend the time to gain a proper respect for this great program.

If you must be told all the solutions, don't bother to play this game. But, if you

have a good imagination, average intelligence and curiosity, the Pyramid puzzle will give you many hours of challenging fun. And, just when you think you have it all down perfectly, keep playing! You may be in for a surprise!

Jim Nageotte
Monterey, CA

Pyramid Remodeled

William O'Brien's feelings are similar to those of many people when they first experience a fantasy/adventure type game.

To start, I think calling the writer of an adventure program is about as brash as writing a nasty letter to God because you aren't president. If you can't solve a problem, you aren't thinking hard enough. As for the limited vocabulary of this game, it is much bigger than Mr. O'Brien asserts.

A simple PEEK through the program yielded the verb vocabulary Rub, Eat, Drink, Jump, Climb, Go, Hit, Break, Kill, Hurt, Take, Get, Drop, Throw, Help and quite a few others that give too much away for me to want to list. While a few commands (like HELP, and RUB) are used for nothing but a few humorous comments, there is certainly nothing wrong with that.

The game itself is quite larger than Mr. O'Brien said. The adventure world consists of more than 30 rooms, as well as a very large (more than 10 room) maze. All you have to do is defeat some of the various obstacles blocking your progress, like the chasm and the guardian serpent. You won't get any further than the few beginning rooms until you start to think logically and cunningly. This coupled with several humorous random remarks when you do outrageous things (try eating the serpent) make Pyramid a game well worth the money.

One thing though. Those of us who played Crowther and Woods original adventure will note definite similarities with some of the room descriptions and solutions to problems. I wasn't fooled by changing a 'rod with a rusty star on an end' to 'a scepter with an ankh on an end'. But since I never got very far in the original Adventure, I did not find this detracted from the game.

So perhaps in the future some of the review work done should be given closer scrutiny before it makes print.

Paul Vadar
Chicago, IL

Compares Adventure

The Radio Shack game Pyramid, reviewed in your August issue, is a close copy of Adventure, also known as Colossal Cave, the granddaddy of all adventure games. Adventure was originally written by Will Crowther and later extensively expanded by Don Woods around 1970. (It is mentioned in your July article on Scott Adams.) Adventure was written in FORTRAN and has been available on many large time-sharing systems for years.

The exact correspondence between Pyramid and Adventure will be obvious to anyone who has played both. Pyramid has simply altered the text describing the rooms and objects, without altering the directions you must move in, or the solutions to specific problems.

In both games you begin by descending into an underground chamber and walking to the west through several more chambers. You pick up a magic wand (a sceptre in Pyramid) in the second room, which you must set down before capturing a bird (a bird statue in Pyramid) in a birdcage (a statue box, whatever that is) in the third room.

Then you descend a staircase beside a small pit, down a rock dome to the east end of a huge chamber. To the west is a bottomless chasm. You wave the wand/sceptre and a bridge appears across the chasm. You can descend from the dome to a room guarded by a fearsome dragon/serpent, who can be driven away by the bird/statue.

Further west is a maze, having the same pattern in both games, where lurks a vanding machine that dispenses batteries for your lamp. And so forth.

Radio Shack has considerably reduced the size and complexity of the original, presumably in order to sell it to owners of 16K systems. The axe-throwing dwarves have been removed and certain regions of the cavern are lopped off. But one can only speculate why Radio Shack bothered to change the text. (Dark motives?)

If anyone knows where Crowther and Woods are, I would be very interested to hear from them about this. The net effect is to make the game less fun. As your reviewer noted, there's no reason to try waving a sceptre but magic wands were made to be waved.

Robert P. Sathar
Bucyrus, OH

command in some recent issues that is not listed in the Level II handbook, and I can't figure out what it does. A sample is Line 920 of the "Star Search" program (80 Microcomputing, August 1980): `FORI = X + (X<>1) TOX - (X<>8): (etc.)`. Now, what is that `(X<>1)` all about? Is it a MAX function?

Warren S. Kirkland
Vacaville, CA

Is MEMORY SIZE being set correctly before loading KBFIX? Sounds like that could be the answer.

(X<>1) is a true/false expression. A value of -1 is returned if the expression is true (in this case if X is not 1), and a value of zero is returned if it is false.—Eds.

One-Byte Break Disable

In response to your article on BREAK disable, for those who do not want to go to the trouble to key in the 30 bytes or so, here is a one byte BREAK disable:

```
POKE 16396, 62 (to disable break)
POKE 16396, 201 (to enable break)
```

Enjoy your magazine very much.

Saturn Software
Gila Bend, AZ

Lowercase Access

Those who have installed a lowercase mod in their 80s may know that there are several characters in the character-generator ROM which are not normally accessible to BASIC. Here is a short demo program using a subroutine which PEEKs the cursor position and executes a POKE which will put these characters on screen.

```
10 CLS
20 PRINT@530,"THIS IS A";XX=72:GOSUB 1000
30 PRINT"AND THIS";76:GOSUB 1000
40 PRINT";IS NOT.";ENO
1000 A=PEEK(16417):B=PEEK(16418):IF A>60 THEN
    CP=((A-60)*256)+B ELSE CP=B
1010 POKE 15360+CP,XX:PRINT@CP+2,"";
1020 RETURN
```

The variable XX determines the character. The values of interest for this program are 64 through 127.

Speaking of character generators, I have it from a fairly reliable source (Radio Shack), that the chip used in their \$99 lowercase mod is Motorola part #SCM37530P. I would be obliged to anyone who could point me to a source for this device.

TAB Problem

I own a TRS-80 48K system (serial #29188) with two Percom 5-inch and two Parasitic 8-inch floppies and an Integral Data Systems IP125 Printer which is connected to the parallel port. As the serial number suggests, my CPU is one of the earlier models but I have not had any hardware failures so far. I had a lot of software problems until I started to use NEWDOS/2.1. I now have NEWDOS/80 which I shall use as soon as Parasitic Engineering has written the software patch to use it on my 77 track/15 sectors 8-inch floppies. However, there is something that has always puzzled me. Maybe your readers can try the following example.

```
10 LPRINT TAB(63);"TEST"
20 LPRINT TAB(70);"TEST"
```

On my system line 10 works fine, however, after 64 tabs my ROM outputs first a CR/LF and then prints the remaining tabs on the following line. This means that I can never print anything past tab 63. For this reason I have to use the STRING\$ function in my programs.

Do other readers have the same problem or do I just have an outdated ROM with a bug?

Rolf Roethlisberger
34 Rue Daubin
CH-1203 Geneva
Switzerland

TCOPY BASIC

I am writing in reference to my article entitled TCOPY which appeared on page 160 of the July issue of 80 Microcomputing. The article presented a Level II machine language program to copy any Level I or Level II cassette tape, and it pointed out that since the program is short, it can be easily POKEd into memory from BASIC.

Correspondence from readers indicates that writing such a BASIC program is not easy for everyone. There-

fore, I am communicating the following BASIC program to provide TCOPY to those readers. The program also provides automatic memory protect, provides prompting to guide the user and provides execution from the BASIC mode via the `USR` command.

The program execution is terminated by pressing the reset button. While this may result in loss of the BASIC code in some versions of the Level II machine, the machine code version of TCOPY will remain and can be executed by entering `SYSTEM` and then /20435 after the prompting symbols "?".

This program is available from the undersigned in a package that includes the utility program TDUMP. The program TDUMP dumps the contents of any Level II tape in ASCII, hexadecimal or decimal. It can be used to identify file names or tape formats. For example, you will discover that source code generated by the EDTASM consists almost entirely of ASCII code. The package price is \$5.95.

\$595*

The Heath H-14 Printer gives you high-performance features at one of the lowest prices anywhere...

- 5 x 7 dot matrix and high quality impact printhead give you clear, easy-to-read images
- Standard 96-character ASCII set, UPPER and lower case
- Operator or software-selectable line widths; 132, 96, or 80 characters
- Compatibility with any computer having RS-232C or 20 mA current loop serial interface, with handshaking
- Sprocket paper feed, with adjustable spacing, to keep paper moving smoothly
- Sustainable print speed approximately 30 characters per second
- "Paper jammed" and "paper out" signals to prevent loss of data
- Selectable baud rates from 110 to 4800
- Convenience of standard fan-fold paper, 2.5 to 9.5 inches wide
- Chrome wire rack to keep paper neat

Visit your Heathkit Service Center

H-14 Printers are on display at the 61 Heathkit Electronic Centers throughout the U.S. and Canada. See your telephone white pages for the location nearest you.

In the U.S. Heathkit Electronic Centers are units of Veritechnology Electronics Corporation.

*In kit form, FOB Benton Harbor, MI. Also available completely assembled at \$895.00, FOB Benton Harbor. Prices subject to change without notice.

The H-14's remarkable price includes connecting cables, paper rack, paper, and ribbon — so you're all ready to run. And service for the H-14 is available at 61 Heathkit Electronic Centers in the U.S. or Canada.

Check out the microprocessor-based H-14 Printer today, in kit form or factory assembled. You'll find complete details in the newest, FREE Heathkit Catalog. Send for yours today, or pick one up at the nearest Heathkit Electronic Center. Dealer inquiries on assembled units are invited, too.

Table 4. 25-pin D connector pin designations.

I would like to apologize to readers for several errors that crept into my article, *Selectric Herd Copy* in the September issue. The worst problem was the missing parts list which somehow did not get published. In addition, there are several errors in the schematic diagrams. Fig. 3 has a number of mistakes.

1. The two unlabeled connections on the bottom of IC1 and top of IC2 should be 13 and 14. Therefore, pins 13 and 14 from both IC1 and IC2 are grounded.

2. There are also unlabeled connections on the bottom of IC3 and top of IC4. These should read 1 and 8 on IC3 and 16, 1 and 8 on IC4. Thus, pins 18 and 1 of both IC3 and IC4 are to +5 volts and pin 8 of both ICs is grounded.

3. Pins 6 and 7 of IC10b are reversed.

4. Pin 4 of IC8 should go to +5 volts, not to ground as shown.

5. Pin 8 of IC11b should be pin 9, therefore, pin 9 of IC11b goes to pin 3 of IC11a.

Several readers seemed confused as to where the lines marked R1, R2, R2a, etc. go. It might be worth mentioning that these lines go through a 560 ohm resistor to the darlington transistor driving the electromagnet as shown in Fig. 4. Thus, the line labeled R1 goes to a resistor then to a darlington transistor driving the R1 electromagnet. Likewise, R2 goes to the resistor, transistor and R2 electro-

80 DEBUG

magnet, etc. IC5, IC8 and IC7 drive a total of 11 transistors which drive 11 electromagnets. In addition, the strobe, shift up and shift down lines each go through a 560 ohm resistor, and a transistor to their respective electromagnets.

Figures 5, 6 and 7 have similar mistakes. First, in all three schematics, pins 3 and 4 of IC24 should go to +5 volts, not to ground as shown. Second, the line marked 37E8 READ in Fig. 5 should be inverted before going to pin 1 of IC17. Therefore, break this line on the schematic and connect another NOR gate in the circuit. Pin 4 of IC23 should go to pins 11 and 12 of IC23 (the new NOR gate) and the output of this gate, pin 13, should continue up to pin 1 of IC17. And finally, the same correction applies to Figs. 6 and 7. In both of these figures the lines marked READ should be inverted. Therefore, break the READ line and connect pin 1 of IC29 to pins 11 and 12 of IC29 (the new NOR gate) and connect the output of this NOR gate, pin 13, to pin 1 of IC17.

A final correction I would like to make known is in Table 5. Address 140 should have 188 as its data, not 066 as shown. Also address 212 should have 204 as its data, not 202 as shown.

I would like to thank all readers for the nice comments they have made about this article. I will be pleased to correspond with anyone about interfacing the Selectric if he or she will include a stamped, self-addressed envelope. Also, I will have a printed circuit board available about the middle of November. Please note that I have moved since I wrote this article. My new address is 248 Barren Hill Road, Conshohocken, PA 19428 and my phone is 215-825-7556.

Michael W. Bickerton, M.D.

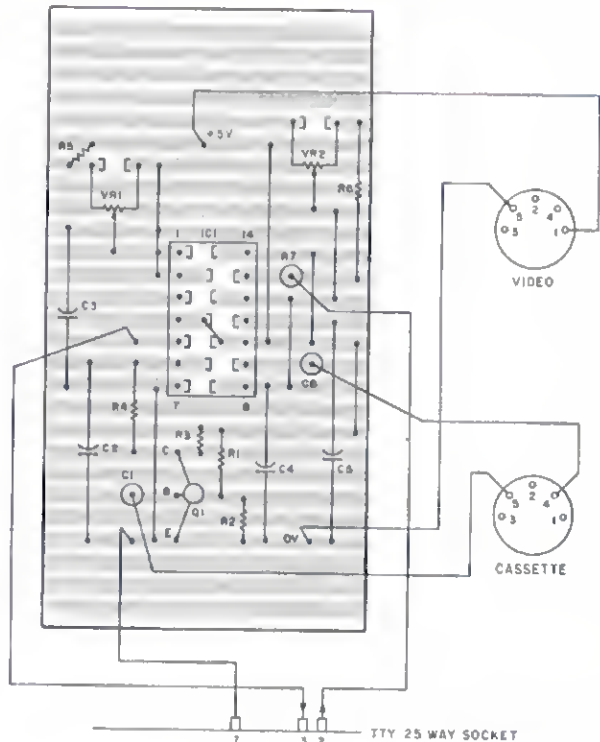

Figure correction for Teletype Interface, September 80.

The Next Trap

Could you please publish these corrections for "The Next Trap," September 1980: The program listing shown does NOT belong to this article. This is the correct listing:

```
10 CLS
20 INPUT "ENTER A NUMBER 1 - 10":C
30 FOR A = 1 TO B: PRINT "A =";A,
40 IF A = C THEN 50 ELSE NEXT A
50 PRINT:PRINT"OUT OF THE LOOP"
60 FOR B = 1 TO 5
70   FOR A = 1 TO B
80     PRINT"B =";B;" A =";A,,
90   NEXT A
100  PRINT
110 NEXT B
120 END
```

To correct the "ROM-TEST-PROGRAM" in the appendix 'C' of the Level I manual,

insert this line: 280 X = 99:NEXT X.

The text is also scrambled up a bit:
From: "The first one in line 30 and 40" continue at "exacutas nine times unless you..."
From: "...should have forgotten.)" continue at "The program then enters two..."
From: "...won't let you do this and out" continue at "comes the message ?NF ERROR..."

Hubert C. Borrmann
Colorado Springs, CO

Customized EDTASM

I have found the following three errors in my article "Customized ED-

TASM" in August's edition. Enclosed are the corrections.

EDTASM Corrections

1) The end of EDTASM is 5D20(H), vise 5520(H).

The next two are both in listing 4.

2) The first is in line 550. There should be a NOP in the instruction field.

3) Line 600 should read: CP 54D instead of: CP 34D. This sets the number of lines to be printed on a page.

80 ACCOUNTANT

by Michael Tannenbaum C.P.A.

"In short, the Model II is physically capable of being used in a multiprocessing or shared-logic environment, but when?"

In previous columns I have discussed some of the limitations of microcomputers in a business environment. At present the Model II is subject to the same limitations of the Model I: Basically, it is still a single-user machine. However, these limitations may be temporary. Radio Shack recently released a technical manual for the Model II, indicating that four expansion slots are available. These slots significantly increase the Model II's capacity. The Model II is capable of addressing up to 512K of memory. In addition, the bus structure is already expanded to accommodate the new 16-bit microprocessors.

In short, the Model II is physically capable of being used in a multiprocessing or shared-logic environment, but when? At present Radio Shack has given us no indication of additional hardware to plug into the Model II. The machine has remained exactly as it was offered more than a year ago.

Communications Program

In the meantime, currently packaged with the Model II is a terminal program which can greatly enhance its capacity as a stand-alone computer.

As illustrated in the user's manual the program is designed to help simplify the installation of a Model II as a "remote job entry" work station for a larger computer.

Take the example of preparing a tax return. Typically, the preparation begins with an assembly phase. During this phase the data are usually gathered in pieces. Once all the data are on hand, a return can be prepared and reviewed for accuracy and sent to the taxpayer.

To automate tax preparation many professionals use a batch data entry service bureau. Tax return information is entered on input forms which are keypunched. The returns are processed at the service bureau and returned with diagnostics. The diagnostics are analyzed and corrections added to the batch. Once the batch is correct the final returns can be prepared. Either the final return or the diagnostic report is reviewed for tax compliance and accuracy.

If gathering the data and entering it into the computer could be done by the preparer and, during the data entry phase, diagnostics performed, preparation could be expedited. However, this requires considerable computer capacity. The capacity "crunch" could be averted by using a computer such as the Model II, to off-load data entry from the main computer. The main computer would be reserved for complicated work and the Model II, together with a program such as Terminal, could be used for the slow data entry work. In practice this could work as follows:

On a daily basis, tax files could be transmitted to the Model II from the main computer. The files could be operated on and returned. The main computer would generate reports on each return. Should a return show "no activity" for a period of time, a warning could be generated to indicate that special attention is required.

No batching would be required by this system. The instant feedback between data entry and edit would shorten the learning curve for new staff and minimize costly data omissions for all users.

Terminal is an interactive menu-driven program designed to transmit files from the Model II to another computer. In operation, the disk file is brought into the Model II memory and transmitted from memory to the host computer. Files transmitted must be in ASCII form and the transmission process can be controlled by the host through a predefined "wait" character. The Terminal program does not appear to be able to audit the transmitted text, identifying errors. Because of this limitation, some way of verifying the accuracy of sensitive data must be used. Data received from the host computer can be either dumped into memory, printed or displayed on the video screen.

When data is received, the program will detect if a parity or framing error occurs. These errors can occur if the Model II is not precisely adjusted to the host computer's specifications. Because the menu may be displayed during data reception, the program indicates the reception of data which was not displayed. Should the host signal a break, a message will be displayed.

Other allowances have also been incorporated to indicate "loss of carrier" during network communications.

ST80 III

Another program which has even more flexibility is ST80 III by Lance Micklus (Small Business Systems Group, Inc., Westford, MA). This program, an adaptation of a package designed for the Model I, is considerably more versatile than Terminal. In the ST80 III system conditions are set up by a special program TCONV/BAS.

This program is designed to tailor the Model II to almost any specifications required by the host computer. ST80 III can alter keyboard, memory buffer, video and printer conventions to that of the host.

An excellent feature for the ST80 III user is the availability of feedback between the host and the Model II that allows character by character verification when sending data. This feature alone and the elimination of requirements for a special program justifies the cost of the ST80 III. However, Lance Micklus did not stop there.

Included with the program are several useful utilities. These utilities convert binary to ASCII files and vice versa; calculate checksums for transmission verification and determine whether a file is ASCII or binary.

The Model II has been used successfully in networks composed of many different types of computers, by setting up different parameter files for each computer. Simply call a different parameter file and the Model II is automatically adjusted to the host system's requirements.

For fine tuning the ST80 III, you can manually adjust its transmitting and receiving speeds so that slight synchronization errors can be corrected. This is especially desirable if the host is time-shared with other peripherals.

ST80 III is sold with parameter tables for the Source and Forum 80. An examination of these tables with TCONV/BAS, will give the user a graphic appreciation of the problems involved when trying to integrate dissimilar data processing devices. ■

Finally

Financial Planning on Micros

TARGET[™] Business Planning System

Until now, sophisticated financial planning required a sizeable mainframe and, all too often, the services of an overworked data processing department.

No longer. Advanced Management Strategies, Inc. presents to Apple* and TRS-80** users an innovative management tool - *The TARGET Business Planning System*.

AMSI, a management consulting firm, has converted its financial planning system to the microworld. *The TARGET Business Planning System* on an Apple or TRS-80 is competitive with mainframe planning languages and systems that cost up to \$50,000.

The TARGET Business Planning System is available in modules giving you the flexibility to buy only the capabilities and functions needed now. Adding modules is as easy as purchasing the specific floppy and user's manual. All modules use the same data files. And, the same entry and editing program is included with each module.

The TARGET Business Planning System is an inter-active tool, not a canned routine which allows you to design and produce desired documents tailored to your particular needs.

Start off with *The TARGET Planner*, the general business planning module to generate pro-formas, income statements, balance sheets and other essential business documents.

The TARGET Planner - \$195.00

Available this fall at selected retail computer outlets.

For more information and the name of the dealer nearest you, call 1/800/323-1717.†

In Illinois, call 1/800/942-8881.†

Enjoying 80 MICRO ? then read on...

80 MICROCOMPUTING has proven, in its first several issues, that it can give you more information on the TRS-80* than any other single source. The magazine has grown more informative with each month and we still have lots more interesting ideas in the works for you.

With the TRS-80* (or 90...etc.) being the most popular microcomputer in the entire world, you are going to benefit from this in many ways. The more computers there are out there of one kind...the more good programs you are going to have for this system. I hope that is obvious. You may be sure that **80 MICROCOMPUTING** will be packed with the shorter programs and reviews of the larger ones. You can waste an awful lot of money on stuff that looks great in the ads, but fizzles out when you try to use it. You need our reviews.

The wealth of programs will also mean that there will be much better programs for the TRS-80* than any other system. Put yourself in the seat of a computer programmer and you'll understand this. If you are going to spend several months developing a comprehensive program, and it takes all of that to write and debug a big program, would you write it for a system which has sold one hundred units or one which has sold over 300,000 systems? The answer is obvious...and this is why we are already seeing programs coming out for the TRS-80* which are far better than anything for any other system on the market. This is tough for other systems...the law of the computer jungle.

Between our connections with Instant Software, the largest publisher of microcomputer programs in the world, and Kilobaud MICROCOMPUTING, you know that **80 MICROCOMPUTING** is going to be your most important link with software for the TRS-80*.

With Instant Software being sold and promoted in every country in the world where the TRS-80* is being sold, our input of programs is also the best in the world. We get programs submitted from everywhere...often from 50 to 100 a week! You'll get the cream of the crop either published or reviewed in **80**.

HARDWARE TOO

The same law of the computer jungle holds for hardware. Would you, as a manufacturer, market an accessory for a system which has sold 100 units or would you go

first for the one which has sold hundreds of thousands. It is, as with software, self-evident why the great bulk of the hardware accessories for computers are for the TRS-80* these days.

80 MICROCOMPUTING has the advantage of the use of the largest and most complete microcomputer lab in the world...the one developed for Instant Software and Kilobaud MICROCOMPUTING. This means that most new pieces of equipment are tested and in use by our staff...and this means that we can tell you what we think is outstanding...and where we find ripoffs. This lab is important to you.

SUBSCRIBE

If you are not already a subscriber to **80 MICROCOMPUTING**, please get signed up right now. The yearly rates are \$18, and that is a bargain. Just one single program of use to you can be worth much more than that. One review of an accessory could save you many times that much investment. I would appreciate it if you would appoint yourself a committee of one to get more subscribers for the magazine. You will benefit even more than we do here at the magazine...because the more readers we have, the more ads we will be able to attract...and the more ads, the more pages of articles you will get every month.

The **80** market can, I think, support a couple of hundred pages of ads...and that would mean a magazine of nearly 500 pages a month. That should hold you. You may not have time left to use your computer.

ENCYCLOPEDIA

If you've read Kilobaud MICROCOMPUTING, you know that I try hard not to

duplicate published material. My concept is that every reader should save every issue (we sell inexpensive boxes for this so they can sit on your library shelf) and treat the magazine as a continuing encyclopedia of computing. I make sure that much of the material in each issue is written in simple language so it will be understandable by even the rawest newcomer to computers. Oh, I have articles for the more advanced users too, so you'll have something to look back over later and use as your understanding of your system grows.

Try to think of **80 MICROCOMPUTING** as more of a large club newsletter than an ivory tower high-level publication. I'll leave the pomp to other publishers...the ones with the well-deserved inferiority complexes who cater to their inadequacies by publishing esoteric beloney. This magazine is written by the readers and edited by people whose aim is to help you enjoy your TRS-80*.

SAVE

With each issue costing \$2.50 at your computer store, that's \$30 a year. For \$18 a year you can subscribe...at least for now. As the magazine expands, please do not be surprised if the cover price increases, along with the subscription price. I started **73 Magazine** for radio amateurs twenty years ago with a cover price of 37¢ (two for 73¢) and it is up to \$2.95 a copy now (and it is the largest of the ham magazines).

For you bargain hunters...and those who find that one year goes by all too rapidly, the three year rate for **80** is \$45. This, too, will be going up...reflecting the inflation, paper increases, postage increases, and a short vacation for me in Hong Kong next year. Someone has to pay for that.

If the coupon below has been used, please fill out subscription form on the Reader Service card in the back of the magazine

80 APPLICATIONS

by Dennis Kitsz

"Although a machine language program is usually clear and transparent, in this case, the BASIC gives the illusion of being more concise."

Remember that stock introduction on The Twilight Zone? Can you still hear Rod Serling intoning detached phrases combined with black-and-white images blanding and diffusing on the screen? Time was always a strong element in his television program, and it came to mind as this month's Applications program consistently demeterialized in the twilight zone of my TRS-80. This month's column about time... was late.

Having thus justified my tardiness to the editors, I will move straight to programs for setting and reading time using the hardware detailed last month. Listing 1 is a BASIC program to do this with the MSM5832 clock/calendar. Although a machine language program is usually clear and transparent, in this case the BASIC gives the illusion of being more concise.

The Controlling Program

Any complicated input/output peripheral calls for a lot of information from the controlling program; this is true for the clock chip as well. Thirteen of its 16 internal registers are used for month, day, year, hours, minutes, seconds and day of the week. Additionally, its slow internal electronics force us to use interface hardware which can grab hold of the clock signals and stabilize them for the computer to read.

Last month we mapped the 8255 interface chip to use addresses 37D0 to 37D3 (14288 to 14291 decimal). Address 37D3 communicates instructions to the port chip itself, readying it to relay data; via the port chip, address 37D2 sets up the clock to read or write; data sent to 37D1 determines which of the 13 registers will be activated; and 37D0 contains the actual time and date information to be read or written.

Sound complicated? It isn't if you work slowly and logically. You can merely use this hardware, but it is worth understanding it as well.

The hardware explained last month takes care of decoding an address block starting at 37D0 hex, which turns on (selects) the 8255 port IC. The lower two bits of the addressing lines are fed directly into that chip, and they determine (once the 8255 has been selected) what the chip will

do next. 37D3 (0011 0111 1101 0011 binary) allows data to talk to the chip, determining which of its three ports will read or write. 37D2 (...10) sets up communications with Port C, 37D1 (...01) with Port B, and 37D0 (...00) with Port A.

We send data through Port C, then, to tell the clock whether "it" will read or write. "Data" through Port B selects the clock's register "address". And finally, Port A is used to transfer what we think of as "normal" data to and from the clock.

Lines 10 to 70 of the BASIC program accept raw input from the user in order to set the clock. Notice that in line 80, a value of 4 is added to variable HO to indicate afternoon. Since there are only 24 hours in a

day, the hours high digit will never be greater than 2, or binary 0010. The two left-most bits aren't used for counting, so they have been set aside to indicate AM or PM. Four is 0100 binary, so adding 4 to variable HO "sets" the PM bit in the clock.

The same thing happens in line 90; the remaining high bit of the hours register can reveal whether we are using a 12 or 24-hour clock.

Monday has been assigned a value of zero by the chip's makers; lines 100 and 110 make that conversion. Determination of leap year is not automatic, our own program must determine it by discovering (in line 140) if the year is divisible by four with no remainder. Input from the user is then

Program Listing 1

complete.

Line 150 switches on the port chip's write cycle, and line 160 does the same with the clock chip. Following through lines 160 through 230, we find that each clock register is prepared for writing (POKE Q), and each value is placed into the clock's registers (POKE Q-1). The clock and calendar are now set.

Reading the Clock

Reading this clock is not as straightforward in Level II BASIC as it seems to be with the Level III and DOS "TIMES" command. Line 240 allows the 8255 port chip to read the clock, and line 260 prepares the clock for reading.

Lines 270 through 390 each ask for a clock register (POKE Q) and subsequently read it with a PEEK(Q-1). Don't be put off by the AND function in each of these lines, nor by the CHR\$(8). The AND function does in software what would have been messy in hardware; that is, we're only using four of eight data lines. The remaining four are not tied off, and the computer sees them as high (equal to a number one). Because of these high lines, every time we read data from the clock, the computer dutifully adds 240 to it (binary 11110000).

To rid ourselves of the nuisance of trying to interpret a date like 241242/242245/248240, we "mask" out all the bits we don't want to read. Thus AND 15 is AND 00001111 to the computer. Only numbers up to 15 will be seen through this mask. In line 340, there's AND 3 (binary AND 00000011). This mask rids us of the bits used for AM/PM and 12/24-hour clock.

Lines 400 and 410 use the opposite masks. They mask out the hours values in the register in order to find out if it is morning or afternoon, or if we have requested a civilian or military clock. The CHR\$(8), by the way, is a command for "displaying" a backspace, so that the time value will be formatted nicely on the screen.

The remainder of the program checks address 14312 for the presence of a printer, formats the output as a string (line printers normally can't backspace), and sends the output to the printer if it is ready.

I recommend the BASIC program, though, only for an idea of how the 8255 port and 5832 clock chips work, not for actual program use. Instead, Listing 2 presents an assembly language routine which will print a formatted time and date using TIMES, and set the time and date using CMD. Because I have annotated the listing in detail, only the general approach and use of the machine language routine will be outlined.

Program continues

Both TIMES and CMD are "Level III" or DOS (disk operating system) commands, so called because, although Level II acknowledges them (with an ?L3 ERROR message), they have been reserved for system software expansion. What that means is that there is a memory patch point for each of them.

In normal Level II BASIC, that patch point command effectively is "jump to the ?L3 ERROR message". We change that in this program—see lines 190 to 230—by patching into TIMES at address 4177 hex, and into CMD at address 4174.

When we now issue a command such as PRINT TIMES, the program jumps to the linking point at 4177, and is re-routed to our own time program beginning at address 7EB6. (If you use an editor/assembler, this program may be relocated to any convenient address).

The IY register is assigned to the clock's allocated memory position (37D0), and, just as in the BASIC listing, the port and clock are prepared for reading. There is a CALL into a subroutine in ROM (line 310), which sets all the necessary pointers to create a 24-character string for BASIC's use.

Take a look at the redundant instructions at lines 440 and 450. Because the clock chip is slow, we read the same information twice to give the signals time to stabilize through the 8255 port device. The clock requires a set-up time of about six microseconds, so if your TRS-80 is modified for high speed, you may have to triple this instruction to get a reliable value from the clock.

Corresponding Day

Lines 460 through 650 look up the corresponding day of the week in the table found at lines 2300 and following. The program then goes on (lines 690 to 1100) to read each value from the clock, convert it to ASCII characters, and build a string for display or printing.

The morning/afternoon part of the string is created at lines 1140 to 1220, and finally the program jumps into ROM at address 2884, which completes the interpretation of the user's BASIC command, directing the TIMES to print, line print, equate with another string, etc.

To set the time, a format similar to the display must be used. In other words, when you command PRINT TIMES, the screen might read:

MON 02/28/80 11:05:16 AM

In setting the time using CMD, it is enclosed in quotes, leaving off only the value

for seconds, as in this sample:

CMD:TUE 03/14/89 02:29 PM"

The quotes, spaces, punctuation, and leading zeros must be intact as shown or a ?SN ERROR will result.

The TRS-80 reads all this information by branching to the address 4174 hex, which would ordinarily produce a Level III error (?L3 ERROR) in response to "CMD". Instead, we redirect it to our routine at 7F54 (line 1280 in the listing). The syntax is verified for the quotation mark, and the table of days of the week is checked for a match to the day you have entered (remember not to use shifted characters).

Each succeeding character is read, validated, and sent out to the clock chip. Almost all the subroutines are identical, except for the one which identifies AM or PM.

Finally, the program executed a RETURN, which sends it back to the program or command routine in progress. The TIMES and CMD statements can be used in a program or from the command mode; they can now act exactly like any other standard Level II BASIC instructions.

Next month the use of the interrupt-driven real-time clock circuit will be presented. In its place (in order to keep my telephone from ringing off the wall!), are a few of the more important missing photographs of the six TRS-80 modifications described in September's Applications. ■

Give Your Computer the Best

The Microline 80

You can't find a better small printer. The Microline 80 will outperform and outlast every competitor. It will run all day at 80 cps with no duty cycle limitations, producing letter perfect printing on plain paper. And the head is warranted for 200,000,000 characters.

You can't find a better value either. The Microline 80 includes upper and lower case characters, double width and condensed printing, friction and pin feed, six and eight line per inch spacing and block graphics for charts, graphs and diagrams. And it operates with TRS-80[™], Apple[™] and other popular small computers. The only extras are snap-on tractor and a buffered RS232 interface. Give your computer the best, the Microline 80.

TRS-80 is a registered trademark of Radio Shack, a division of Tandy Corp.

Power Supply with Battery Backup for MSM5832 clock

THE ASSEMBLY LINE

by William Barden, Jr.

This month I'm going to answer the questions many disk users have been asking: How do I talk to the disk by the TRSDOS calls? How can I bypass TRSDOS and talk directly to the disk? Yes, assemblers, this month's column is devoted to disk users. If you don't have a disk, I'll wait until you rush to town and buy one (... I'll just load this cassette file while you're making the purchase...).

Disk Basics

By now you've purchased your disk, plugged it in, and are ready to go. Let's look at a few disk basics. Some of these points may be obvious to a lot of you, so please bear with me as I start from the very beginning.

The beginning is a circular piece of mylar coated with a ferro-magnetic material. Each diskette is certified by the manufacturer by writing and verifying high-density data. In most cases, this certification procedure is much more stringent than the bit densities encountered in TRS-80 use. This explains why many users get away with making their own "flippers," cutting new index holes and write-protect notches on the opposite side of the diskette use the second side. (I do it myself with no problems.)

You all know the physical layout of the diskettes. The index hole marks the beginning of sector 0 in the TRS-80 soft-sector format. (In the hard-sector format there is an index hole for each sector.) The write-protect notch, of course, inhibits writing when covered with tape.

An important point, which may not be obvious to everyone: As the diskette comes from the manufacturer, it is unformatted. There is no data, other than random data, on the diskette. There are no inherent magnetized marks that indicate sectors, tracks, or any other areas on the diskette.

To be used, each diskette must be formatted. This simply means that identification data is written on each of 35 (or 40 or 77) tracks on the diskette. The identification data includes gaps for 256 bytes of user data in each sector. Standard TRS-80 diskettes are 35 tracks of 10 sectors each. The formatting process is handled by a formatting program that talks in assembly language to the 1771 disk controller chip in the expansion interface. The formatting program sends special codes to the disk controller chip to cause track/sector identification marks, data address marks, and CRC (check) characters to be written in the proper places (Fig. 1).

The layout of the standard TRSDOS diskette is shown in Fig. 2. The first 256 bytes of track 0, sector 0 of the diskette are dedicated to a bootstrap program called BOOT/SYS. This bootstrap is read into RAM at 4200 by the Level II initialization code. The initialization code reads back status from the disk. If there is indeed a disk out there, it reads in track 0, sector zero. The bootstrap pulls in the remainder of TRSDOS.

The directory of TRSDOS is located in track 17 (physically halfway through the tracks). It occupies the entire track, and

contains a granule allocation table (GAT—sector 0), hash index table (HIT—sector 1), and directory of file names (remaining eight sectors). The directory contains the names of all disk files. All additions of new files, modifications of existing files, deletions of files, and so forth, is done by first searching the directory for the file name, or making a new entry of the file name. File names are in standard TRS-80 format: one-eight character name, extension, password, disk drive number, and Social Security number.

Disk files are made up of any number of granules. Each granule is five sectors, or one-half track worth of disk. Why five sectors?

Five sectors is 1280 bytes, a not unreasonable size for program chunks or meaningful quantities of data. I suspect one of the reasons for this disk allocation is that it's simply easier to work with 70 segments rather than 350 segments (sectors) of disk resource—it makes the file management routines less complicated, and cuts down on the size of directory space.

Now let's ask ourselves a philosophical question... Why this structure? Why not a directory on track 0? Why not 250 segments to be allocated one at a time? Why passwords? Why not? That's the design that was implemented, and it's not bad. If you want to use TRSDOS, you must accept the existing structure—well, almost...

Two Alternatives: How do You Manage?

Knowing something about the TRSDOS structure at this point, the disk user is faced with two alternatives. One is to use

the built-in file management routines of TRSDOS and Disk BASIC to store and retrieve files of data. This is not a bad choice; we can easily initiate, write, read and verify sequential or random files in assembly language. What we cannot do in this structure, however, is get at other areas of the disk—investigate the directory, bootstrap, SYS files, and so forth.

The second alternative is to scrap the TRSDOS structure and write your own assembly language file management routines to create, write, read and perform other operations on files. You can create your own file structure on disk, or even make one compatible with TRSDOS. However, to do this, you must gain experience in two areas.

First of all, you must know how to talk to the disk controller chip directly. The Western Digital FD-1771 chip is a small microprocessor in itself, dedicated to controlling floppy disk functions. It has a set of 11 commands and a number of internal registers that control sequences of operations such as writing a sector, reading a sector, stepping the head in and out, writing and reading tracks, and so forth. Because of the complexity of the chip, we can't cover the operations here.

Secondly you must know something about disk file management design. Your application may be as simple as storing data on the disk from track 0, sector 0 through track 34, sector 9; it may also be a lot more complex, such as implementing a time-sharing application or virtual memory. Here again, there is too much material to be covered even in several columns.

If you would like to know more about implementing your own disk file management and disk I/O drivers, here's the plan of attack: Get a copy of the FD-1771 Floppy Disk Controller/Formatter specification from Western Digital. It will list all commands, status, and disk operations. Then type some simple experimentation using assembly language. You can't hurt the disk, but I would advise using a diskette other than your company's payroll master.

If you haven't become a blithering idiot after that, do some reading on file management and start coding your own designs. The advantages? You could conceivably establish a much faster, more efficient storage scheme, geared to your own application.

For the remainder of the column we'll look at the second option, using the TRSDOS I/O calls to handle TRSDOS compatible files. Although we have to work within the framework of TRSDOS, we can still do some neat things.

Physical Records vs. Logical Records

Suppose you need an article cross-reference file containing titles and pertinent information on computer magazine articles. If you establish that each record of the file can be held in 64 bytes, the record definition is called the logical record of the file; it's the record that the program will be processing and listing out.

When writing records to disk, four 64-byte records must be blocked into 256-byte chunks. The reason for this is that all disk operations are done on a sector basis. The sector records are called physical records, since they describe the length of the actual physical record, just as a punched card (say what?) would be one physical record of 80 bytes.

Much of the work of TRSDOS file management is concerned with blocking the user specified logical records into sector sized physical records on writes, and de-blocking the logical records on reads. To do this, TRSDOS reads and writes sector

records from a user specified 256-byte buffer. In Disk BASIC, the buffers are dedicated memory areas. In assembly language calls to the TRSDOS I/O routine, the user may specify any memory area as the buffer.

Device Control Blocks

TRSDOS I/O calls are made by passing the address of a device control block (DCB) in the DE register pair. The DCB is a 32-byte block anywhere in user memory that contains a standard TRSDOS type file name (don't forget your Social Security Number).

The contents of the DCB are used to find or initiate the disk file. The file name

Manual.) Each call is to a TRSDOS routine at about 44XXH:

- **INIT** Creates a new file entry in the directory.
- **OPEN** Finds an old file entry and starts operations.
- **READ** Reads a logical record from an existing file.
- **WRITE** Writes a logical record to an INITIALIZED or OPENED file.
- **POSN** Positions causes TRSDOS to find a random record.
- **VERF** Is the same as WRITE, except that the data is read back and compared.
- **CLOSE** Terminates operations on the file.

in length.

```
LD    HL,BUF1    ;LOAD BUFFER LOCATION
LD    DE,DCB     ;DCB LOCATION
LB    8,84       ;LRL OF 84 BYTES
CALL  4420H      ;CALL INIT
JR    NZ,ERROR   ;GO IF ERROR
```

Note that on the return the Z flag is set if everything went as planned. However, if the Z flag is not set (NZ condition), a TRSDOS disk error occurred, and some type of error action must be taken. The error may be anything from a write-protected disk to a hard disk error. There's a list of error codes in your TRSDOS/Disk BASIC Reference Manual together with corrective action.

After the file has been INITIALIZED, a series of WRITES can be done. The WRITE call is made with DE pointing to the DCB (which now contains variables such as the LRL). The HL register pair contains the User Record Area address or UREC. This is the location of your logical record. The WRITE causes your logical record to be physically transferred from the UREC to the BUFFER. Only when the BUFFER is filled to capacity is a disk sector write made for the file. In the case of 64-byte logical records, this means a write every four logical records.

```
LD    HL,MYREC   ;LOAD ADDRESS OF
                  ;64-BYTE REC
LD    DE,DCB     ;DCB LOCATION
CALL  4439H      ;CALL WRITE
JR    NZ,ERROR   ;GO IF ERROR
```

A VERF write reads back every sector after a write to disk and compares it with the contents of the buffer. The setup is the same as the WRITE, but the call is made to location 443CH. I'd recommend the VERF in place of a WRITE, as the overhead is not all that great.

Each successive WRITE automatically writes a record in the next position in the file, creating a sequential file. After all the necessary writes have been done, a CLOSE operation terminates the disk file. Since there may be a partial BUFFER that has not been written out, and since other TRSDOS actions must be taken to close the file, the CLOSE is absolutely necessary.

```
LD    DE,DCB     ;LOAD DCB ADDRESS
CALL  442BH      ;CLOSE FILE
JR    NZ,ERROR   ;GO IF ERROR
```

Reading an Existing File

The normal sequence of calls for reading an existing file is to call the OPEN routine so that TRSDOS can locate the file, then make a series of READ calls to read logical records into the User Record Area,

Fig. 3. DCB Format

string is then clobbered, and the 32-byte area is used as working storage for the disk file activity. After the file operations are completed, the file name is restored. The appearance of the DCB is shown in Fig. 3, both in file name and working storage formats. Why does TRSDOS use the DCB instead of maintaining working variables somewhere within the depths of itself next to the mysterious F3GUM or RVCOOK? Don't complain—the DCB defines an area that the user can access to look at the parameters as file operations are performed.

Let's get to the actual disk calls in the TRSDOS area themselves. (Sorry about the programmer in Des Moines who fell asleep reading this introductory material.) There are eight calls. (They are described in the TRSDOS/Disk BASIC Reference

- **KILL** Deletes a file from the directory and releases its space.

Creating a File

The normal sequence of calls for creating a new file is to call the INIT routine to create a new file entry, make a series of WRITE calls, and then CLOSE the file. The CLOSE call is very important, as it writes an end of file and closes file operations in an orderly fashion. Not using the CLOSE might result in data still in the buffer and not written out to disk.

The INIT call is made with DE pointing to the DCB, HL pointing to any 256-byte buffer area in RAM, and the B register containing the length of the logical record. This LRL may be one to 255, for lengths of one to 255 bytes. If a zero is used, the record will be made 256 bytes, or one sector

THE ASSEMBLY LINE

and then to CLOSE the file.

The OPEN routine cell is identical to the INIT except for the CALL location. (By the way, almost all TRSDOS files have LRL = 0 (256 bytes) so use this value if reading existing TRSDOS files.)

```
LD HL,BUF1 ;LOAD BUFFER LOCATION
LD DE,DCB ;DCB LOCATION
LD B,64 ;LRL OF 64 BYTES
CALL 4424H ;CALL OPEN
JR NZ,ERROR ;GO IF ERROR
```

After a successful OPEN (Naturally there is an error code for non-existent files), a READ call can be made to read the physical record into the User Record Area. This will physically transfer a record from the BUFFER to the user specified UREC but will result in a disk sector read only if the last logical record in the BUFFER has been transferred. In the 64-byte LRL case, every four READ calls will result in a new disk sector read.

```
LD MYREC ;LOAD ADDRESS OF
;64-BYTE BUFFER
LD DE,DCB ;DCB LOCATION
CALL 4436H ;CALL READ
JR NZ,ERROR ;GO IF ERROR
```

Successive READs will transfer the next logical record from the file into the UREC automatically, reading a sequential file without the user having to specify which record is required. After a series of READs, a CLOSE is done as in the WRITE case to properly terminate the disk file action. The calling sequence is the same.

Random Files

The above sequences show how to WRITE and READ sequential disk file. The only difference in operating with random files is that the user must specify the record to be transferred, rather than letting TRSDOS simply pick up the next sequential record or write the next record in sequence.

In random files, a POSN call precedes every READ or WRITE. The POSN cell positions TRSDOS to the random record required. This step is necessary because the chances are good that the random record is not in the current BUFFER on a READ, or could not be placed in the BUFFER on a WRITE. In the POSN cell, DE is loaded with the DCB location as in the other cells, but BC contains a logical record number for which TRSDOS is to search and position. A typical sequence to read the 15th record of a file after an OPEN would be:

```
LD DE,DCB ;DCB LOCATION
LD BC,14 ;15th RECORD
CALL 4442H ;POSN CALL
```

```
JR NZ,ERROR ;GO IF ERROR
LD HL,MYREC ;LOAD ADDRESS OF
;64-BYTE RECORD
LD DE,DCB ;DCB LOCATION
CALL 4436H ;READ RECORD
JR NZ,ERROR ;GO IF ERROR
```

A DUMP Program

To tie all of these concepts together I've written a short program that will dump out a given area of memory as a disk file of 64-byte logical records. It also has the ability to read in the records. This is somewhat more general purpose in nature than

the TRSDOS DUMP command, as it does not assume that the data in memory is machine language. A good test case for its use is to dump out the video display memory area and then to read it in again.

Next month we'll present the results of the Third Assembly Line Programming Contest, provided that I'm not getting dozens of entries by the article deadline. (I just got a high speed multiply routine today for the second contest that looks like it does the job in 145.99 microseconds! 145.98 anyone?)

Programming Techniques for Level II BASIC

**William Barden, Jr.
Tandy/Radio Shack
Softcover
\$4.95**

by Tom Yeager

Radio Shack's latest venture into the world of publishing is a book which tries to teach the TRS-80 user some of the more advanced techniques used in programming. Covering everything from simple debugging to complicated sorts and tape I/O, *Programming Techniques for Level II BASIC* can enhance the work of both amateurs and experts.

The book, which contains twelve chapters, is arranged in the author's usual self-teaching style. It is assumed in the first chapter that the reader has at least a nodding acquaintance with Level II BASIC, but the text is most certainly not aimed at the experienced programmer. Those who fall into this category, however, would not be unwise to read this guide—many chapters would be of interest to any programmer concerned with conservation of time and memory.

Barden's intent is to uncover some unusual applications for the Level II. Such applications certainly can't be found in the Level II reference manual. In fact, the book is less a handbook of technique than it is a handbook of well-documented applications.

The first chapter lays the groundwork for the rest of the book by giving the reader more explicit descriptions of Level II functions than presented in the reference manual. This chapter also covers some basic programming methods which are utilized in later chapters.

Perhaps the greatest attention in this book is paid to increased efficiency.

Throughout can be found several methods to faster graphics, searching, and sorting—all which provide aid to those speed-oriented programmers.

The reader is taken through a series of applications, each a bit more involved than the one before it, and all of them are linked together one way or another. Barden's writing style—one which mixes wit and humor with instruction—helps keep the reader's attention, but can be tedious at times. A quick browse through the table of contents gives a hint to the tone of the entire work—which seems to be riddled with puns and jokes and is seldom serious. I'm afraid this may keep some from purchasing an otherwise excellent book.

Among the book's many merits is that it's extremely easy to understand. Most of the text is followed closely by actual examples, many of which combine several advanced methods and provide the reader with a better understanding of not only the material at hand, but also how the current concept can be worked in with others.

One of the best chapters in the book deals with high-speed searching and sorting of data. Barden outlines several methods of accomplishing these fearful tasks,

finally leading up to the fastest and most efficient. His descriptions are clear, and his examples are excellent illustrations of the material. Imagine a 1000-element mailing list that doesn't take all night to sort....

Toward the end of the book is another interesting chapter that made me wonder if Radio Shack's usual editor went on vacation prior to this book's release. Remember those pages in the reference manual which tiptoe around such mundane things as variable storage and interfacing BASIC with machine language? These items are described much more clearly and in greater detail in Barden's book. Earlier on we even get a rundown of the TRS-80's number system.

Although I can't honestly say this book has it all, I can say that it would be to any programmer's advantage to use the techniques set forth in it. A special invitation goes out to those in the business of writing programs for others—you would do well to use the methods in this book in your software, especially if it's business-oriented. I have seen several high-priced software packages that might come near being worth their price, had they made better use of the Level II's features. ■

The Most Popular Subroutines in BASIC

**Ken Tracton
TAB Books
Summit, PA
Softcover, 182 pages,
\$5.95**

by Carroll M. Grigsby

I was ripped off! Glancing through this book in a bookstore I saw a way to generate predictable random numbers.

Unfortunately, I failed to examine the rest of the book very closely. Only after I paid for it did I realize that it may be the worst value available in today's personal computing market. It is a slipshod effort, filled with errors and obviously produced in haste. I write grocery lists with more care.

The title should have warned me. Is there a Top-40 chart for BASIC subroutines?

I will dismiss the word "most" as advertising puffery and quote from the blurb on the rear cover: "Here's an understandable guide to the BASIC subroutine...and how you can use it on any floating point BASIC integrator (sic) or computer to avoid tedium, economize on computer time, and make your programs run faster."

Are "integrators" a strange and wonderful new mix of interpreters and compilers?

White Meat or Dark?

Let me turn your attention to the meat of this turkey. In Chapter One the reader is told that the line numbers used in the examples can be altered without harm; from

this I presume that the target reader is a beginner. But in the next paragraph, the reader is cautioned that "altered variables" may cause problems. Yet no definition is given of "altered variables." This is not fair to the poor neophyte, who might not know what an "altered variable" is.

The author then explains that there is a price to be paid for the more compact programs that result from the use of subroutines: slower execution. The author is wrong; programs can execute more quickly if they incorporate intelligently designed subroutines.

One of the major shortcomings of the book is that most of the examples given are trivial. I concede that examples in which the computation is very simple are an effective way of illustrating a principle. But that is not the case here, where most of the examples are two or three lines in length.

The examples don't illustrate how subroutines are used to improve the quality of programs. It is possible for a beginner to get the impression that subroutines are limited to only a few lines of code, which is not correct. Many BASIC dialects permit multiple RETURN statements, yet no mention is made of this.

Other notable omissions include the DEF FN statement, and a discussion of techniques for passing variables between the calling program and subroutine.

Each of the chapters purports to give subroutines related to some technical field. But are they of any real value to someone who is interested in that field? I think not.

The chapter on measurement conversions for example, tells us that Angstrom units are converted to nanometers by multiplying by 0.1. I would think that anyone who was writing computer programs involving these units would be well aware of this fact.

For reasons known only to the publisher and author, either the book was not proofread by anyone, or else the proofs were reviewed by a technical illiterate, resulting in numerous mistakes. Examples include saying that another unit for pressure is mm Hg (Hertz is used for frequency; mercury is used in barometers); and that light intensity may be measured in foot-lamberts (try foot-lamberts). At least four of the examples given will cause an error, either because of syntax or logic.

Chapter Three, "Conversion," accounts for over one-quarter of the book's size, more than its share of errors and very little utility. It could have been condensed to about five pages by using a general purpose subroutine.

Chapter Six discusses graphing. The

author uses a non-standard BASIC function called SUBSTR(G\$,X,1). It appears to be similar to the Microsoft MID\$(G\$,X,1) and is available on the CDC-CYBER computer which Tracton used to test the subroutines in the book. But it does not appear in David Lien's useful *The BASIC Handbook*.

The greatest variation among the various BASIC dialects seems to be in the area of string functions. In a more professionally done book, there would be an explanation of how the SUBSTR(G\$,X,1) works. To his credit, the author does explain that there are variations in the requirements for dimensioning string variables.

Chapter Eight discusses moments of inertia. The author confuses the area moment of inertia and the mass moment of inertia in his introductory remarks. The area moment is used, among other things, to compute the deflection of a structural beam, whereas the mass moment might be used to calculate the angular acceleration of a wheel. The subroutines presented refer only to the area moment of inertia.

Several Alternatives

The next few chapters are short and of no better quality than the earlier ones. Er-

rors abound and opportunities to give the reader some real information are missed. Sorting is called sequencing. The random number generator doesn't (at least in the version of Microsoft 8K BASIC on my Sorcerer).

Chapter 17, the closing chapter, can help the beginning programmer. It contains several program listings which have been written using information from the earlier chapters.

Although hardly models of style, a beginner could learn something from them: that there can be huge differences between the various versions of BASIC; that just because something is printed in a book does not mean it is correct; and the meaning of SN ERROR.

The book's lack of credibility is a surprise coming from Ken Tracton, author of the excellent *57 Practical Programs and Games in BASIC*, also published by TAB and Radio Shack.

To anyone who still feels like spending \$5.95 for this book in spite of my criticism, I recommend that you consider one of the following alternatives:

1. Put the money back in your pocket and save it to spend on one of your other vices.
2. If you have no other vices, send the money to me. I do. ■

Simutek
P.O. Box 35298
Tucson, AZ 85740
\$29.95

by Jaka Commander

Simutek supplies a high speed modification kit which can be installed by anyone with experience in electronics.

Don't attempt the mod if you're a beginner!

There are a couple of etch cuts to make, and about ten wires to connect. And it's easy to make a costly mistake.

However, if you can install the board this is a good version of the common high speed mod.

A couple of nice touches places this one apart from the rest.

For example, your power-on LED flashes when in the high speed mode. This indicates an increase in CPU clock speed of 50 percent. The mod also disables itself during cassette and disk I/O, eliminating the need for software patches while using disks. It gives the normal baud rate when using cassette I/O.

The kit takes about an hour to install and comes complete with generous lengths of wire, and a push button switch

to enable or disable the speed-up.

Documentation is adequate, although the printing is of dubious quality. This makes the photographic illustrations difficult to follow.

Nevertheless, for the price, you can't complain. You're covered by a 90-day warranty, and your computer will run 50 percent faster.

Incidentally, this review is written with Electric Pencil using the high speed mod, so you probably had trouble keeping up with the words. Proof that it works! ■

Comprint 912
Computer Printers International
Mountain View, CA
\$660

by Mike Aronson

When my printer was delivered, I was sure someone had made a mistake. I had ordered the Comprint 912 because of its small size and quiet operation; the shipping carton was huge. It was hard to believe the monster in this package would fit into my eight by ten study.

Opening the box was the first of several pleasant surprises. Inside the shipping carton was another box about half the volume of the outside carton protected by specially molded styrofoam corners. I marveled at the microcomputer industry's coming of age—here was a professional package! Inside was a second surprise: a sheet of unpacking instructions.

Comprint has taken care to assure that your printer arrives in good shape and that you don't destroy it with your first move.

For example, before you can load the paper, you must remove a yellow tag which warns you not to run the printer with the cover off. That is a great packaging method for people like me who are too impatient to read the sixty-four-page instruction manual.

Two Types

Printers fall into one of two types, matrix or impact printers. Impact printers work like a typewriter. A metal or hard plastic piece in the shape of a letter strikes an inked ribbon. Impact printers are usually noisier and have more mechanical parts than a matrix.

Matrix printers economize by using a single microprocessor controlled print head to produce every symbol. Each character is generated by a series of dots printed close together. The printer head is positioned close to the paper and moves across horizontally. Some matrix printers can use ordinary paper but others have no ribbons and must use special paper.

The Comprint 912 is an electrical matrix printer. It uses a special black paper covered with an extremely thin layer of aluminum that conducts electricity. The printer head is made up of twelve rigid wires in contact with the paper. If one wire is given

a short electric pulse, the aluminum under the wire is vaporized, exposing the dot of black paper underneath.

With Comprint 912 a line of eighty characters can be printed in about one-third of a second. Adding the time it takes for a carriage return, a page of fifty-eight lines of solid print takes around 45 seconds.

One of the extra features of the Comprint 912 is the number of matrix dots used to form characters. Other printers use 5 x 7 or 7 x 9 (horizontal x vertical). The Comprint uses a 9 x 12 matrix to allow more defined letters, as well as lowercase letter descenders below the line.

To connect a Comprint 912 to your TRS-80, be certain you specify model 912-GP. An older, parallel version, 912-P, is complicated to connect. The model GP requires you to pull out one jumper plug and plug the printer cable into your expansion or printer cable interface. The only tool

you need is a screwdriver.

There is an error on page 17 of the instruction manual dated March 1979. You will find the jumper plugs on the solder side of the printed circuit board, not the components side, so don't try to remove the printed circuit board. (The jumper plug is shown in its correct position in Photo 1.)

The printer comes with a one-hundred-foot roll of paper. Replacement rolls cost eight dollars for three hundred feet. You can write on the aluminized paper with either pencil or ball point pen, the bonding is very good, and no aluminum dust wears off onto your fingers.

My only disappointment with Comprint 912 has been that the up arrow prints as a square bracket. Evidently, Radio Shack uses a 91 code for up arrow and the printer expects a 94 code. Other than that, it works well and I have been impressed with its quality and usefulness. ■

Sample Run from Comprint 912

Photo 1. The jumper plug is the small rectangular piece just above the midpoint of the ribbon cable running across the front of the printer.

Whatever happened to eenie, meenie, miny, mo?

This may put the Godfather out of business.

I could be another Solomon...

If only my heart would stop racing...

It must use Bayesian, weighted factor analysis, and...

Brilliant! Like a window into the future.

...a perfect gift for that urban cowgirl!

Maybe this'll help me choose a career...

I could use it to select my staff.

Would I rather have Winston's millions or Billy Joe's love?

Hmmm... could be my ticket to the Boardroom.

Can't any of these people afford \$29.95?

Should I buy stock or commodities in this economy?

When DecisionMaster speaks everybody listens.

Let's face it. We all have to make decisions. Decisions that can change our lives. Decisions that can make us happy, or unhappy. Decisions that could win us time or fortune. Now, DecisionMaster can help you make the best decisions of your life.

Use Bayesian theory to peer into the future... even if you've never heard of the Bayes Rule. Do a complete weighted factor analysis... without knowing what one is. Use discounted cash flow to compare investment alternatives without bothering with present value tables. These and other sophisticated theories that were once the exclusive domain of professors and top business executives are built into DecisionMaster's algorithms... so you can use them as the touch of a key!

DecisionMaster is easy to use. It features:

- A fully documented manual developed by an authority in the field.
- A unique programmed-inlined cross-reference system.
- A powerful formatted-screen data entry system.

You'll use DecisionMaster in hundreds of routine decisions, as well as more important ones such as:

- Buying a house.
- Changing jobs.
- Selecting investment.
- Evaluating insurance policies.
- Expanding product lines.
- Leasing vs. purchasing.

If you buy only one computer program this year, make it DecisionMaster. And when it speaks, listen.

DECISIONMASTERTM

To order, see your software dealer or return this form with your check to: DecisionMaster, Dept. 80 • 10428 Westpark, Houston, Texas 77042. Add \$1.50 for shipping and handling.

Beginner's Russian

This package consists of three programs that graphically display the Cyrillic alphabet. The programs are arranged so that you progress from one to the next—building your knowledge as you progress. It includes instructions on proper pronunciation of the letters and even an introduction to simple Russian words.
Order No. 0136R \$9.95

Everyday Russian

Everyday Russian will acquaint you with the Russian words relating to: foods, places to eat, everyday signs, and the names of common stores. You will also learn the order of the Cyrillic alphabet. Each of the three divisions of this package will teach you the words and then quiz you on comprehension. You can even practice typing in Russian, using your TRS-80 keyboard as a "Cyrillic typewriter."
Order No. 0137R \$9.95

The Russian Disk

Now you can have *both* the Beginner's Russian and Everyday Russian packages on floppy disk! Requires an Expansion Interface with 16K and one disk drive.
Order No. 0212RD \$24.95

Teacher

This program allows you to input any number of questions and answers. The computer will prepare tests, give quizzes, provide up to three hints per question and even give (optional) graphic rewards for correct answers. Perfect for parents, teachers, or anyone faced with learning a lot of data in a short time.
Order No. 0065R \$9.95

Wordwatch

Four programs for budding lexicographers, etymologists, or anyone else who uses words. In WORD RACE, you must choose the proper definitions. Find the misspelled word in HIDE N SPELL. Take a pre-recorded quiz in SPELLING BEE, in which the words are played aloud! Meet variations on proper spelling in SPELLING TUTOR.
Order No. 0111R \$7.95

IQ Test

Are you smart enough to buy this package? IQ Test will administer and score an intelligence test in 30 minutes flat! There are three equivalent tests, each consisting of 35 questions, designed to test your general knowledge and problem solving abilities. Most of us claim a "touch of genius"—here's your chance to prove it!
Order No. 0157R \$9.95

Archimedes' Apprentice

A tutorial software package that will teach you the formulas used to find the volume of *any* solid object. It covers parallelipeds (cubes and rectangular solids), prisms, pyramids, cylinders, cones and spheres. It can even quiz you on how well you learned the lesson.
Order No. 0092R \$9.95

Video Speed-Reading Trainer

You can increase your reading speed and comprehension. How? By practicing, that's how! This three-part program will flash characters or words on the screen, then you must echo what you saw. You can begin at a relatively slow rate, because the computer will advance your speed automatically as your speed and comprehension increase. It will train you with numbers, letters, words and phrases.
Order No. 0100R \$9.95

Typing Teacher

A complete seven-part package that guides you from familiarization with the keyboard, through typing words (and phrases), to mastery of touch typing. Your video monitor becomes a bottomless page for typing practice!
Order No. 0099R \$9.95

All packages listed are for the TRS-80 Model I Level II; they require 16K of memory and are cassette-based unless otherwise indicated.

Instant Software

Prices subject to change without notice.

PETERBOROUGH, N.H. 03458
603-924-7296

ej-ə-'kā-shən\ n

1: The action or process of training and developing knowledge.

Teacher's Aide

Now you can have the benefits of Computer Assisted Instruction (CAI) in your own home. The Teacher's Aide program will let you create a teaching system for any conceivable subject. The program allows you to create a question and answer lesson (you can input up to 8000 characters per lesson). You can then save this lesson on the disk and create an entire sequence of lessons.

Your lessons can be tailor-made for you or your students. The options available are: (1) review the material prior to taking the lesson, (2) provide hints to help answer questions, and (3) offer a graphic display as a reward for correctly answering all the questions. The Teacher's Aide program will even allow for spelling errors!

The Teacher's Aide package is perfect for parents, teachers, and students who need the unlimited patience and undivided attention only a computer can provide. Reading, writing, and arithmetic will never be the same—now that you have the Teacher's Aide package from Instant Software.

This package requires the following minimum system:

1. A TRS-80 Level II with 16K RAM.
2. An Expansion Interface with 16K RAM.
3. One disk drive.
4. Any compatible Disk Operating System.

Order No. 0214RD (disk-based) \$39.95

Grade Book

Teachers, now you can use the speed and accuracy of the TRS-80 to help you calculate student grades. Type in the scores for tests, quizzes, homework, classwork or special projects. The Grade Book program will calculate and display individual grade averages.

The program permits you to weigh student performance scores and convert raw score totals to a 100-points-equals-perfect-score basis. You can also average quarterly grades with the grade for the previous quarter, semester and final exam, to obtain an average grade for the year.

When grading time comes around, don't chain yourself to a calculator—go modern with the Grade Book package.

Order No. 0050R \$9.95

Basic Math Program from EMSI

The Basic Math Program is a comprehensive math teaching package. It was created by a certified math teacher with 15 years of programming experience.

The first three programs comprise: Whole Number Arithmetic by Teaching Objective. This set includes Addition, Subtraction and Multiplication. The fourth program is Fractions and Mixed Number Arithmetic. Logic and Deductive Reasoning is the fifth program in the set. The Metric/English Conversion program rounds out the series.

You choose from a MENU of options, so as to custom-tailor both practice and test sessions. The program options include: Number of Problems/Session, Level of Problem Difficulty, Number of Seconds/Problem, Type of Assistance to be Offered, and Type of Reward.

The package includes a 60 page teacher's manual that contains detailed instructions on how to use the programs. It shows you *exactly* what material will be on the monitor and how to select the program options. It further explains how to analyze the session results by number of problems correct, actual problems given, if an incorrect digit was entered, if it was corrected and whether the HELP feature was used.

Fractions and Mixed Number Arithmetic shows the student every step of how to solve the problems. It waits for the student to enter each answer and, if he makes an error, reviews the material so the error can be found.

Deductive Reasoning is a modified and much improved Mastermind-type exercise.

Metric/English Conversion will convert quantities (length, area, volume and weight) from Metric to English, or English to Metric.

Word-IV
Disk Based Word Processor, \$49
IDM IV Data Base Manager, \$69
 Micro Architect, Inc.
 Arlington, MA

By Don DeJarnette

For the past several months, Micro Architect has advertised a word processor and data base manager at very reasonable prices. I was somewhat skeptical of the low prices, but the advertised features convinced me to purchase both systems.

Word-IV—Disk Based Word Processor

Word-IV is a disk-based BASIC language word processor. Text and format control data are entered exactly as one would write a disk BASIC program.

Features of the system are: page length, page width, beginning point of page, automatic page numbering, page centering, left and right justification, line spacing, title generation for each page, special character generation and space reservation on succeeding pages.

Word-IV fully supports the upper and lower-case capabilities of your printer. To produce an uppercase letter, the up arrow is typed preceding the letter. This may seem a bit awkward at first, but once you get used to the procedure, it is easier than typing a shift uppercase letter.

The text and format program is stored as a separate file on the disk, using the ASCII extension. The length of the text is limited only by memory and disk storage capacity. Editing is very easy, using the EDIT command in DOS BASIC. After producing the formatted text and saving it on disk, you are ready to load the Word-IV program into DOS BASIC. This is followed by entering the saved ASCII file. A unique feature of this program is the ability to run more than one of the same program or a combination of different programs.

The text and formatting are executed in BASIC. This opens up many possibilities for modification.

There are several problems with the program. BASIC is exceedingly slow, an important consideration if production of lengthy reports is your primary concern. This article runs in about 6-7 minutes. For some reason, you cannot load a text program saved in ASCII back into DOS BASIC for further editing. This means that if you anticipate further editing, the text program must also be saved in BASIC. There is also a problem with the program generating a ?. Each time the question mark ap-

pears, you must type .sc 63. (.sc stands for special character. This program handles "?" as a special character.) These problems are minor in my opinion and certainly correctable. ■

IDM-IV Data Base Manager

IDM-IV is a disk-based, BASIC language data base manager. It consists of three separate programs: initialization, data base manager and report.

Initialization requires that the user input file specification data, such as naming the string and numeric fields (up to ten numeric and ten string), determining the number and size of the fields, choosing the key field, specifying the number of records and naming the file. This information is then formatted on the diskette.

String fields contain up to 255 bytes, while numeric fields are limited to four characters. The total record is limited to 255 bytes. Record totals are limited only by your disk storage and memory capacity. I routinely sort a data base of 500 items with very few problems.

The Data Base Manager program is next loaded into disk BASIC. Through use of the ADD facility, you begin entering information in response to questions asked by the computer. These questions are created from the initialization program data that you have supplied.

Once data entry has been completed, the report writer segment of the Data Base Manager is entered. Up to ten different reports built to your specifications are possible. Options included in the report writer include a selection of any number of fields to be printed, total or average of all numeric fields, multiplication and division of any of the numeric fields. In addition a numeric filter lets you specify values within a set range, e.g., only list purchases between \$50-\$100 or only list customers between 20-40 years of age (up to four numeric filters are possible per report). String sort keys allow the IDM user to sort up to four string fields. After the criteria for the report have been selected, it is saved to disk.

Report is the last program to be entered into the computer. Two options are possible: data base listing, which prints the entire data base and is formatted to duplicate a file card, and format report, which lets you select one of the reports that you created with the report writer.

IDM-IV has two problems in common with WORD-IV: too much disk I/O and the characteristic slow speed of BASIC. In spite of these two problems, this is a fantastic data base manager. ■

Radio Shack
Disk Instruction Course
Tandy Corporation
Ft. Worth, TX
\$29.95

by Robert L. Zappa

Recently, I upgraded my system by adding disk drives. While anticipating their arrival, I read the TRSDOS manual, but file structures completely confused me.

The Radio Shack computer catalog describes their Disk Instruction Course as a step-by-step guide in the use of DOS and Disk BASIC. I bought it and for \$30, plus tax, I got four Radio Shack disks, each with one lesson containing six to eleven parts.

My Expectations

This is one of the poorest examples of computer-aided instruction I've ever seen. Everything of merit would fit into a small twenty-page pamphlet including the covers, and still leave room for an appendix of all the politicians who have lusted after the presidency. I expected a course which, using DOS with some sample pro-

grams and files, would systematically lead me through the complexity of files and the specific DOS and Disk BASIC commands. That is to say, I expected the course to be interactive with the disks. Radio Shack does not say that's how the course is designed, but it seems a logical expectation.

The format of the course is a series of short comments, followed by a few questions. If the questions are answered correctly, you proceed. The content is to the point, but at too simple a level. Neither by description nor through practical experience does it expand upon anything described in the original manual.

The course does clarify the manual. Its very triviality demystified disk operations. No longer awed by the obscurities of the DOS Manual, I took a program from *Kilobaud Microcomputing* and translated it into Radio Shack dialect. Through translation came understanding and, eventually, I hope mastery.

If you want to learn how to use your disk drives, buy yourself a box of disks—ten disks are about the same price as the course—take the DOS Manual and your computer magazines and work through a short meaningful program. ■

MMS FORTH
Miller Microcomputing Services
Natick MA
16K Diskette \$64.95
16K Cassette \$44.95
MicroFORTH Primer \$15.00

by Terry Kapner

Terry, you should try FORTH. It's really simple to use.

Mike was once more extolling the virtues of his latest discovery. He was dying to get me hooked on it. Thus far, I had managed to escape this latest language for the TRS-80, but I couldn't help being drawn to the keyboard every time I heard him chortle or gloat over another feature of his new toy.

Finally I decided to take the fetal plunge. At the first opportunity I acquired my own copy of FORTH. I chose MMS FORTH from Miller Microcomputing Services; theirs was available on disk, as well as tape. (Mike had the tape version from Programme International, Inc.)

The Manuals

The Programme version includes everything in one manual, written by the Programme people, while MMS uses two manuals. One is the *micro-FORTH Primer*, available from FORTH, Inc. (the people who invented it), and a second manual written by MMS.

The MMS manual contains all the additions and alterations made by MMS to the standard version of FORTH, plus instructions on how to use the MMS FORTH version effectively. A nice feature of the MMS version is the use of TRS-80 BASIC words for FORTH commands.

For example, CLS in FORTH means the same as it does in BASIC, clear screen. Likewise INKEY\$ and so on.

The *micro-FORTH Primer* is a very informative manual that contains a glossary of all the terms used in FORTH, and also includes a clear and concise explanation of how to write programs. The manual is invaluable while learning the language, and I strongly suggest that any one interested in FORTH programming purchase it.

FORTH is a hybrid language, combining the clarity of a high level language like BASIC with the speed of low level language programming in assembly.

Unlike BASIC and most other high level languages that separate the programmer from machine code, FORTH allows the programmer to maneuver easily back and forth between high level easy to use programming techniques and direct assembly language programming. Thus you can

interchange programs between different processors using FORTH, with only minor alterations to specific routines.

FORTH uses a technique known as Indirect Threaded Coding. Each instruction in FORTH is composed of pointers that lead to other pointers which ultimately lead to executable machine code. This means that FORTH is a stack oriented programming language. It is composed of a number of assembly language modules, or primitives, each with a specific task or purpose. These primitives are each named and can be selectively called up or combined into words. This technique is what gives FORTH its tremendous power.

Unlike other programming languages, the ability to define new words, or primitives, in the FORTH dictionary is always available to you through its CATALOG function. And there is no run-time penalty for these new words.

For example, CLS is a FORTH word made up of two primitives—home cursor and clear to end of page. So whenever you want to clear the screen, you enter the word CLS.

Another example is LIST. LIST is used to put a page of memory on the video. Now suppose you want to clear the screen each time before you put the new page on the video, you can enter CLS and then 10 LIST (to list page ten of memory). Or you can define a new word that uses these two words in its own definition, calling it CLIST, like this:

```
: CLIST CLS LIST ;
```

From then on, every time you entered 10 CLIST, you get a clear screen and then the new page ten listed. And CLS and LIST are still available for use separately.

If you want to save added new words for future use, it can easily be done using the command DWTSECS (include the proper parameters, of course).

Suppose that your present version of FORTH doesn't have the proper primitives or predefined words to do the task you have in mind. In that case, if you have the machine code know-how, you can define your own primitives directly in FORTH, using the built-in FORTH Editor Assembler, and add them to its catalog.

If your catalog becomes too large for convenience, just instruct FORTH, via the keyboard, to FORGET the extraneous WORDS.

In order to make this as easy as possible, FORTH uses the same syntax in all operations: keyboard, assembler, editor, everything.

There are three stacks used in FORTH. The most commonly used stack is the parameter stack, which starts at the high

end of memory and works its way down. This particular stack's function is for user inputs and outputs, and is also used as a scratch pad by the various words and primitives. The second stack is the return stack, which also starts at high memory and grows towards low memory. It is used primarily by FORTH as a loop counter. The last stack is a hardware stack used by the Z-80 processor and is not normally available to you in programs.

One of the reasons for the efficiency of FORTH lies in its stacks. Because of these stacks, permanent memory locations do not have to be assigned to temporary variables. This cuts down tremendously the amount of overhead memory required to run FORTH.

One very nice mathematical feature of FORTH is its ability to switch from one number base to another, without any run-time penalties. All the FORTHs support the standard bases of HEX, OCTAL, and DECIMAL.

In Summary

FORTH is a very versatile language, combining the best sides of both high level and low level languages, excluding many of their disadvantages.

- It is easily extensible and just as easily contractable.
- It allows interfacing of equipment to software with comparatively minor work done by the user.
- Most programs can be switched from one processor to another with only minor changes.
- Programming is structured, with control passing from the most general of commands downwards to the most specific. Many programs may be executed just by entering their name.

In view of these facts many programmers will find FORTH to be just what they need to develop software for new hardware devices compatible with the TRS-80. After all, FORTH was originally designed to help astronomers use computers to control radio telescopes and other experimental devices with a minimum of time spent in programming.

There is one last note. Unlike the other Z-80 versions of FORTH, MMS supports only the 8080 Assembler commands. Some people will look upon this as a disadvantage. However, after reading both manuals, it is easy to see that it would not require too much work to write a new assembler for the Z-80 commands (in FORTH of course). However, for the not-so-ambitious, MMS is now selling an add-on utility that supplies the Z-80 Assembler Editor and full floating point math routines. ■

SCRINPUT™

● SCReen INPUT replaces INPUT and is easily adapted to YOUR application.

● "ARROW" keys (↑ ↓ → ←) provide full cursor control. Makes editing easy.

● Can't be out-run by even the fastest typist

● Up to 80 data fields on a screen

● Flashing cursor - won't hide data beneath it.

● Fully relocatable - work in any TRS-80* Model I Level II machine, without modification.

(* TRS-80 is a Radio Shack Trademark)

SCRINPUT in finance: Developed for a banker, loan amounts, interest rates and number of payments are typed directly into the video worksheet. Computer calculates and displays results. New values can be typed directly over old. Much easier and faster than INPUT.

Imagine. Data entry by filling in a video form. Easy error correction - just type over mistakes. No cumbersome INPUT statements, no valuable data scrolling off the screen.

SCRINPUT MAKES IT POSSIBLE IN JUST THREE STEPS:

1. Draw your input form on the video screen using PRINT statements.

2. Define data entry fields in the SCRINPUT data table.

3. Activate SCRINPUT through a USB call.

Now fill in the blanks. **SCRINPUT** assigns all data to BASIC variables which are processed normally by your program. It's that easy!

SCRINPUT comes with user manual of instructions, examples and demo programs. Even the loan worksheet program and a source of listing of the machine language code are given. Try **SCRINPUT**. If you are dissatisfied for ANY reason, return it within 10 days for a full refund.

Is accessible software a temptation to steal?

Software Libraries: A Controversy

A library, according to Webster's *New Collegiate Dictionary*, is "a collection of literary, musical, artistic or reference materials; it is also a collection resembling or suggesting a library (such as a library) of computer programs." Software libraries, however, are fairly new on the scene.

According to Jeff DeTray, Associate Publisher of Wayne Green, Inc., there are two kinds of software libraries. The first involves a group of software users getting together and contributing programs of their own devise into a common pool of programs. The group composes a list of available programs and within the group one can borrow—essentially it is a software exchange.

The second kind of software library is a commercial venture started by a private individual or individuals. The operator of the library buys, for example, two or three of every kind of program available on the market, and often includes books on microcomputers in the collection.

After the library is stocked with materials, an ad is placed in one of the computer publications advertising lending services. The lendee pays an annual membership fee and a smaller fee for each program lent. The borrower is then allowed to keep the program for a designated period of time, say one or two weeks.

Existing Software Libraries

How many of these libraries are there?
How long have they been around?

Much of this information seems to be

shrouded in mystery. I dug up three different operations: one which was located in Standish, Maine, had a post office box number and no phone; another which was located in Rockville, Maryland, had a phone that was only in operation one night a week for three hours; and another I contacted.

Raymond Gabriel of Ohio is presently in the process of establishing a "home computer library division" as a part of his present company. Gabriel says that the development of this library was inspired by the purchase of a TRS-80. After becoming familiar with it he "became fascinated by the prospects, especially for home use in the future."

Presently, Gabriel's library has 25 members, over 100 software programs and about 30 books. Annual membership in the library is \$20. New members have 30 days to try the service. If they aren't satisfied, the full membership fee is returned. Rental charge is based on 20 to 25 percent of purchase price.

Gabriel stresses that "software libraries are no different than any other kind of library." Yet, there are some people in the industry who would vehemently disagree with him. There is much opposition to the development of software libraries because of the problem of programs being duplicated, resulting in profit losses for both companies and authors. And thus far the issue of copyright laws protecting software has been a hazy one.

Your local library might lend programs some day.

The Copy Problem

Why are software programs more susceptible to being duped than books, for example? DeTray says, "The difference between books and programs is that books are tedious to copy and usually the photocopying costs will run a bit of money, however to make a copy of a program is very simple and it doesn't cost much. In fact the temptation is huge. I can't imagine someone borrowing a program and not copying it."

Gabriel does admit that copying is a problem but feels that the benefits of such a service outweigh this negative aspect. Gabriel says that if the legality of software libraries is going to be in question then the general library system should be in question. As a specific example, Gabriel raised the question of home video and whether it too, would be considered in violation of copyright laws.

Gabriel feels that software libraries can help the business. He says, "We are providing a market for authors who might not normally sell many of their programs. For example, if we carry it and someone borrows it and likes it, chances are he'll go out and buy the program when he might not have before." Gabriel also says, "By providing this service we are creating a greater interest and thus are helping to create a market for programs."

Library Controversy

Continued from page 47

Arguing Against Software Libraries

Herv Pennington, a software developer, feels that software libraries cheat authors. For example, he says, "You loan a guy a disk that costs \$100 and he makes a copy. . . the guy that spent all that time developing it, the author, doesn't make a cent and the guy that is running the library makes five or six dollars per program, depending on his fee."

Not only are they doing authors a disservice, but they are also hurting growth of the industry, in Pennington's opinion. "The author who is losing money after spending hours developing programs is going to say 'the hell with it, I can make more money selling real estate.'" Basically, Pennington, like many others, feels that the libraries "steal an author of his right to an income."

Ed Juge of Tandy has similar feelings. "If the people who are involved in these libraries ever spent a couple of months developing software and then tried to sell it to the public, they would have a different perspective. It's simply not a viable thing." Juge feels it's a matter of copyright, but as he pointed out, "no one at this time knows what copyright is. Perhaps copyright will take care of this situation. In effect the whole scheme is a rip-off, library developers are knowingly or unknowingly keeping an author from the benefits of his labors."

Publisher, Wayne Green says, "The library concept in the microfield is a destructive one." Green feels strongly about software developers being cheated. "Instant Software is prepared to invest a good deal in suits to protect its authors."

Discouraging Copying

Is there any way the industry can discourage copying?

PT Wolfe, manager of Instant Software, says that Instant Software prices its software inexpensively enough to discourage copying. For example, Wolfe says that for \$7.95 it's worthwhile to purchase the whole package rather than acquire only a copy of the program at a comparable price. Juge says that his company, Tandy, uses the same approach, by pricing their software reasonably so that "the average person would be more likely to buy the whole package."

Pennington has a different idea.

"Books never lose in court," he says, "and that's what we will do, write books with the programs which can be typed in and debugged—and in the back of the book there will be, for example, a coupon to go to your local dealer and buy the disk if that is preferred." When copying becomes less of a problem, the attitude toward software libraries may change.

Advantages of Software Libraries

There are some software authors who do see the advantages presented by software libraries. Author Dennis Kitz believes access to information is essential. Kitz says, "In fact, if it weren't for program trading, the industry wouldn't have grown as fast as it has. More computers have been sold merely because of the availability of software programs."

Kitz believes that while the industry is still in its experimental stages, and there are only a handful of magazines doing reviews, it's unreasonable to expect a user to wait for the product to be reviewed. In most cases he'll just go to the club and see for himself.

Kitz thinks that libraries in general are a good thing and that they also are essential. "Software programs are not yet available (at the public library), because there

is not enough consistency of format. But what happens when they are? You can't encourage computer literacy without having the software available."

Another author and a trader of original software says, "I approve of libraries, but I disapprove of the pirating, and seriously—how can you stop it? It (software) is no longer a multi-thousand dollar item. There are some good programs and there is some real garbage; it's understandable that an individual would like to know in advance what he is buying."

Moral Questions

The issue of whether software libraries should or shouldn't exist raises a number of questions. By trying to stop these software libraries, is there an injustice being done by preventing access of information? Do these libraries encourage growth in the industry by promoting availability, or are they hurting the industry by making it easy to steal? Exactly how much protection can the new copyright law offer?

Chief of Circulation at the Boston Public Library, Mr. O'Halloran reports that of the 800,000 books and materials (records and cassettes) that the general library circulates in a year, 1½ percent of the materials are never returned, roughly 12,000 books, records and cassettes annually. O'Halloran summed up by saying, "There is no library that is getting back 100 percent of what they are giving out."

By Pamela Petrakos

Software Copyright Law

Late in 1974, Congress enacted a bill establishing the National Commission on New Technological Uses of Copyrighted Works (CONTU). The commission conducted a three year study into the need for including software in the current copyright laws.

Six long years later, H.R. 6933, incorporating the recommendations set forth by CONTU in their final report, was finally introduced in March of this year. The bill was passed into law August 20th.

Until this time, software copyright has been in and out of controversy and under numerous limitations and restrictions. It has been protected by the vagaries of judicial interpretation and the whims of individual state lawmakers, when it was protected at all.

House bill 6933 was introduced by Rep. Kastenmeier of Wisconsin, and the Committee on the Judiciary recommended

that it be passed into law. Primarily addressing the patent and trademark laws, it also amends Title 17 of the U.S. Code (USC) dealing with copyrights. The sections of 17 USC directly affected by the bill are 101 and 117.

Section 101 has been amended to include a definition of computer programs, as "a set of statements or instructions to be used directly or indirectly in a computer in order to bring about a certain result."

Section 117, dealing with limitations in exclusive rights, has been amended to allow the purchaser of a copy of a program to make another copy or adaptation of that program only if:

- The new copy or adaptation is made as "an essential step in the utilization of the computer program in conjunction with a machine and that it is used in no other manner," or

Memory Expansion Module for TRS-80™..

**All you have
to remember
is to plug it in**

Introducing the MT-32. Our new, brilliantly designed Printer/Memory expansion module for the TRS-80. This unit will add 16K or 32K of dynamic RAM to your basic 16K machine. The module also contains circuitry to drive Microtek's MT-80P dot matrix printer, or any other Centronics-compatible printer.

No hardware modification to your TRS-80 is required. Just plug into your bus connector and you are ready to go.

All Microtek products are covered by a one year warranty.

* TRS-80 is a Registered Trademark of Tandy Corp.

Three assembled and tested configurations are available:

Without RAM
(MT-32A @ \$119.50)

With 16K RAM
(MT-32B @ \$159.50)

With 32K RAM
(MT-32C @ \$199.50)

Available from Microtek
or your nearest computer dealer.

MEMORY TRANSPLANT

Now NRI takes you inside the world's most popular microcomputer to train you at home as the new breed of computer specialist!

NRI teams up with Radio Shack to teach you how to use, program and service microcomputers...make you the complete technician.

It's no longer enough to be just a programmer or a technician. With microcomputers moving into the fabric of our lives (over 200,000 of the TRS-80™ alone have been sold), interdisciplinary skills are demanded. And NRI can prepare you with the first course of its kind, covering the complete world of the microcomputer.

Learn At Home in Your Spare Time

With NRI training, the programmer gains practical knowledge of hardware, enabling him to design simpler, more effective programs. And, with advanced programming skills, the technician can test and debug systems quickly and easily.

Only NRI gives you both kinds of training with the convenience of home study. No classroom pressures, no night school, no gasoline wasted. You learn at your convenience, at your own pace. Yet you're always backed by the NRI staff and

your instructor, answering questions, giving you guidance, and helping you over the tough spots.

Explore the TRS-80 inside and out

NRI training is hands-on training, with practical experiments and demonstrations as the very foundation of your knowledge. You don't just program your computer, you introduce and correct faults...watch how circuits interact...interface with other systems...gain a real insight into its nature.

You also build test instruments and the NRI Discovery Lab, performing over 60 separate experiments in the process. You learn how your trouble-shooting tools work, and gain greater understanding of the information they give you. Both microcomputer and equipment come as part of your training for you to use and keep.

Send for Free Catalog... No Salesman Will Call

Get all the details on this exciting course in NRI's free, 100-page catalog. It shows all equipment, lesson outlines, and facts on other electronics courses such as Complete Communications with CB, TV and Audio, Digital Electronics, and more. Send today, no salesman will ever bother you. Keep up with the latest technology as you learn on the world's most popular computer. If coupon has been used, write to NRI Schools, 3939 Wisconsin Ave., Washington, D.C. 20016.

Training includes TRS-80 computer, transistorized volt-ohm meter, digital frequency counter, and the NRI Discovery Lab with hundreds of tests and experiments.

(TRS-80 is a trademark of the Radio Shack division of Tandy Corp.)

Standards Become Important for Networks

Standardization. Efforts at it are all around us. The newscasters, chattering on the tube obediently speak a mid-western normal dialect of American English. No "ayups" or "y'alls" will be heard from their well-groomed ranks.

And now, the computer industry is struggling to develop its own set of standards with regard to information transfer and access, in an effort to facilitate the interconnection of machines of different manufacture.

The thorny problem of system standardization has been around for some time. Its solution has lately become critical because of the increasing role being played by machines in 20th century life. And whether or not you are in favor of machines consorting with each other, the fact remains that the power of machines is greatly enhanced once they can be connected.

An example: Bureaucracies (especially in government) are great fans of computers since they feel responsible for a considerable amount of data. Unfortunately, variations in equipment and software make it almost impossible for the Federal Government's machines to talk with the state governments', for states' machines to communicate with the cities' and for city governments' to interface with either.

Ethernet and National Standards

Recently, government and industry groups have been working on the problems of standardization in an effort to hammer out some acceptable design norms. Working primarily through the IEEE (Institute of Electrical and Electronic Engineers), an industry group composed of Xerox, Digital Equipment Corp., and Intel has developed Ethernet. Ethernet is a system for local network interconnection. It specifies design criteria as well as other aspects of network operation.

On the federal side, the National Bureau of Standards Committee on Computer Science and Technology has been working on projects like FIPS. FIPS, or

Federal Information Processing Standards, has basically the same goal as the IEEE's Ethernet—establishing standards for computer use that will facilitate the interconnection of devices. Devices as diverse as microprocessors and mainframes are involved in the Federal Government's standardization program.

Harry White, Chief of the Standards Administration Office of the Institute of Computer Science and Technology within the National Bureau of Standards, feels that eventually all systems, small and large, will have interconnect capability. His group has been working with the IEEE and others on the standards necessary to make this possible.

Standards Effect Networking

In Mr. White's opinion, the standardization efforts are "going well," and industry cooperation is assured. "If vendors want to do business with the government, they must conform to our established standards for hardware and software. In essence, our clout is economic since the government represents such a large segment of these people's marketplace." With industry cooperation expected, the road to universal standards may be a smooth one.

When queried about the impact of his standardization efforts on small system users like TRS-80 owners, White indicated that the time when 80 owners will have the ability to interconnect with mainframes is not far off. "For the near term, the S-100 bus structure will be central to our microcomputer standardization efforts."

White also indicated that the CP/M operating system appears to be the most practical for the vast majority of applications and is compatible with operating systems of much larger machines. CP/M and an S-100 bus structure are options that are currently available to 80 owners.

One word of warning White provided related to the configuration of S-100 structures. "Users must be firm when it comes to dealing with vendors," he said. "They

must be sure that the S-100 bus they end up with is the standard version. Right now there are several versions in use and some confusion exists as to what a definitive S-100 structure really is."

Gerald Clancy, chairman of the IEEE's Local Area Network Standards Committee, indicated that his group is not really concerned with the small system user yet. Instead, the focus of the IEEE's efforts has been on establishing standards relating to local networks interconnected by coaxial highways. Several large office buildings within the same city, each containing many terminal and mainframes, is an example of this type of network.

Clancy's group has developed a three part program covering Protocols, Interfaces and Modems/Transceivers and feels that they have completed 95 percent of their work on establishing standards. He is confident that all remaining obstacles will have been overcome and the committee's work completed before the first of the year. For the time being, it appears as if the IEEE activities will have little effect on the day to day computing reality of 80 owners.

X-21 not RS-232

In Clancy's view, "Networks consisting of machines located in the home will not be a reality until cable TV services become widespread." Until that time, Clancy feels that most small system users will remain isolated from mainframe interconnections. When they are connected, "X-21, not RS-232 is likely to become the standard structure in modem interfacing for small machines," he predicts.

The importance of on going standardization efforts does not lie in their immediacy, however. What today's standardization efforts bode for the future is of importance. The era of instant interconnect is not yet a reality but the simple fact that government and industry professionals perceive a need for standardization indicates that the role of the machine in our lives will, inexorably, expand. ■

Spinning Facts about Disks

So you have finally come to a point in your computing affair when you're bored with cassettes. You've known all along that cassettes are slow, serial and unreliable, and now you've gone beyond their limitations with your own abilities. So what do you do?

You read. Information can be hard to come by though, and if you're wondering what exactly disks are, how they work, and if they are really worth all that money, you may find some answers here.

Disks come in various sizes and are available in both hard and soft varieties. The soft type are called floppies and are constructed of mylar which has been coated with a magnetic oxide. Soft disks used on Radio Shack and other small computers are either eight or 5 1/4 inches in diameter. The 5 1/4 inch disks are called mini floppies and cost about \$2 each.

One mini floppy disk is capable of storing 83K bytes of data. Floppy disks are enclosed in a protective, paper dust jacket and spin within their jackets when operating. The inside of the jacket is coated with a dry lubricant and disk cleaning agent that keeps the disk surface clean and smooth.

Disk Access

Access to the disk is gained through four openings (illustrated in Fig. 1) in the disk jacket. The largest, in the center of the disk, accepts the friction drive mechanism when the disk drive door is closed. The oval opening provides the read/write head in the disk drive with access to the disk surface.

The notch in the upper edge of the dust jacket is the write protect notch. When this notch is not obstructed, information

may be placed on the disk. When it is obstructed, no write operations may be performed on the disk. The disk is said to be "write protected" if this is the case, and this safety mechanism is intended to ensure that no data will be inadvertently written over.

The smallest opening on the disk jacket is the sector index hole. A photoelectric sensor in the drive mechanism senses the location of this hole and orients the disk controller to sector zero. The beginning of all the tracks of the disk coincide with the location of this hole. The TRS-80 system employs soft sector disks. That means that the beginning of only one sector is physically marked by a hole. All other sector boundaries are marked magnetically.

When new, disks are blank on both sides and before they can be used they must be formatted. Formatting a disk divides the disk surface in an orderly fashion and a formatting routine to do this is usually included as a utility in the DOS (disk operation system) software.

Disk Sectors and Tracks

A Radio Shack TRSDOS formatted disk is divided into 10 pie shaped wedges, called sectors. In addition, 35 concentric circles called tracks are overlaid on the disks sectors (See Fig. 2). Data is magnetically placed along the tracks and throughout the sectors. Track numbering starts at 0 on the outer edge of the disk and proceeds inward. Each of the disk tracks can thus occupy several sectors.

A sector is capable of storing 256 bytes and since track length decreases toward the inside of the disk, packing is more dense on inner tracks than on outer tracks. A disk directory file (list of disk contents) normally occupies track 17 and information encoded here tells the disk controller chip in the drive unit where to find specific files on the disk.

The disk drive mechanism provides the logic and locomotion for the read/write head in its travels across the disk surface. The disk controller chip calls the shots and the drive motor must spin the disk up to 300 RPM before any read/write operations can take place. A highly accurate stepping motor in the drive unit steps the head from track to track across the surface of the spinning disk.

Wear and Tear

If you think this life style is rather strenuous for the flimsy floppy, you're right.

Disks are tough customers though, and have a rated life of five years of actual use, or 2,500,000 passes per track (approximately 110 hours). As disks age, it is common to encounter problems with the densely packed inner tracks. Frequent read/write errors on inner tracks are indicative of a worn disk.

Disks are also susceptible to other forms of trauma. Dirty environments foul them up. By dirty I don't necessarily mean the bondo room at the local body shop. A smoke filled office or seedy basement laboratory can be enough to give disks fits. Disks prefer being comfortable too: While they will operate over a wide range of temperatures, disk I/O (input/output) errors become more frequent as temperature variations increase. In spite of all their frailties, disks are remarkably rugged and take abuse as well as the next peripheral.

The Price Tag

Now, what about cost? Disk system prices vary widely, but a figure of about \$450 per drive is average. Since two drives are better than one (and in most cases necessary), we are looking at a \$900 investment in an \$800 computer. Add to this the price of an expansion interface (if you don't already have one), plus the cost of operating system software and we are talking big bucks.

Is it worth it? Well, I guess that depends on two things: how much money you've got deflating in the neighborhood Savings and Loan, and what type of applications you expect your system to serve. ■

Fig. 2

MULTI-USER OASIS HAS THE FEATURES PROS DEMAND. READ WHY.

Computer experts (the pros) usually have big computer experience. That's why when they shop system software for Z80 micros, they look for the big system features they're used to. And that's why they like Multi-User OASIS. You will too.

DATA INTEGRITY: FILE & AUTOMATIC RECORD LOCKING

The biggest challenge for any multi-user system is co-ordinating requests from several users to change the same record at the same time.

Without proper co-ordination, the confusion and problems of inaccurate or even destroyed data can be staggering.

Our File and Automatic Record Locking features solve these problems.

For example: normally all users can view a particular record at the same time. But, if that record is being updated by one user, automatic record locking will deny all other users access to the record until the up-date is completed. So records are always accurate, up-to-date and integrity is assured.

Pros demand file & automatic record locking. OASIS has it.

SYSTEM SECURITY: LOGON, PASSWORD & USER ACCOUNTING

Controlling who gets on your system and what they do once they're on it is the essence of system security.

(THEN COMPARE.)

Without this control, unauthorized users could access your programs and data and do what they like. A frightening prospect isn't it?

And multi-users can multiply the problem.

But with the Logon, Password and Privilege Level features of Multi-User OASIS, a system manager can specify for each user which programs and files may be accessed—and for what purpose.

Security is further enhanced by User Accounting—a feature that lets you keep a history of which user has been logged on, when and for how long.

Pros insist on these security features. OASIS has them.

EFFICIENCY: RE-ENTRANT BASIC

A multi-user system is often not even practical on computers limited to 64K memory.

OASIS Re-entrant BASIC makes it practical.

How?

Because all users use a single run-time BASIC module, to execute their compiled programs, less

memory is needed. Even if you have more than 64K, your pay-off is cost saving and more efficient use of all the memory you have available—because it services more users.

Sound like a pro feature? It is. And OASIS has it.

AND LOTS MORE...

Multi-User OASIS supports as many as 16 terminals and can run in as little as 56K memory. Or, with bank switching, as much as 784K.

Multi-Tasking lets each user run more than one job at the same time.

And there's our BASIC—a compiler, interpreter and debugger all in one. An OASIS exclusive.

Still more: Editor; Hard & Floppy Disk Support; Keyed (ISAM), Direct & Sequential Files; Mail-Box; Scheduler; Spooler; all from OASIS.

Our documentation is recognized as some of the best, most extensive, in the industry. And, of course, there's plenty of application software.

Put it all together and it's easy to see why the real pros like OASIS. Join them. Send your order today.

OASIS IS AVAILABLE FOR

SYSTEMS: Altos, CompuCorp, Cromemco, Della Products, Digital Group, Digital Microsystems, Dynabyte, Godbout, ISC, Index, Intersystems, North Star, Onyx, SD Systems, TRS 80 Mod II, Vector Graphic, Vortex.

CONTROLLERS: Bell Controls, Carter, Corvus, Korian, MicroStation, Microplus, Parbell, Telepak, Thinkertek, X Comp.

MAKES MICROS RUN LIKE MINIS

Combine accurate flight characteristics with the best in animation graphics and you'll have SubLOGIC's

T80-FS1 Flight Simulator

for the TRS-80

SubLOGIC's T80-FS1 is the smooth, realistic simulator that gives you a real-time, 3-D, out-of-the-cockpit view of flight.

Thanks to fast animation and accurate representation of flight, the non-pilot can now learn basic flight control, including take-offs and landings! And experienced pilots will recognize how thoroughly they can explore the aircraft's characteristics.

Once you've acquired flight proficiency, you can engage in the exciting British Ace 3-D Aerial Battle Game included in the package. Destroy the enemy's fuel depot while evading enemy fighters.

Computer and aviation experts call the T80-FS1 a marvel of modern technology. You'll simply call it fantastic!

Special Features:

- 3 frame-per-second flicker free animation
- Maximum transfer keyboard input
- Constant feedback cassette loader

Hardware Requirements:

- Radio Shack TRS-80, Level 1 or 2
- 16K memory

Software Syndicate Scheme

IJG, Inc., Upland, CA, is putting a novel marketing plan into effect: For the first time, major and minor software manufacturers will join in a syndicate with a nationwide circuit of software stores. The plan, targeted for January 1, 1981, is the first to solidify a national distributorship for competing lines of software. IJG's Harv Pannington is coordinating the scheme.

According to one source at IJG and another representative in the software industry, IJG is reputed to have signed Michael Shrayer Software, Palm Springs, CA, makers of The Electric Pencil; Scott Adams of Adventure International, Longwood, FL; Meta Technologies, Euclid, OH; Apparat, Denver, CO; Racet Computers, Orange, CA; and Remsoft, also of Euclid. Other contracts are being negotiated.

According to sources, IJG's plan will put a custom mix of software from any number of manufacturers into a software outlet for as little as 10 percent of its retail value. A minimum order of \$1,000 will represent \$10,000 of software at the suggested retail price.

A conservative estimate involves only 100 outlets, each investing a minimum of \$1,000. If they are able to turn merchandise three times in the first year, it will mean a potential \$3 million in sales for retailers. How much of this or any other figure is profit to the dealer or to IJG remains unknown.

When queried, Jeff DeTray, assistant publisher at Wayne Green, Inc., expressed some doubt as to whether a software store could turn \$10,000 in stock in a year, let alone four months. Others in the industry share his view.

Cornerstone Is Capital

The key to this software conglomeration is capital. The cornerstone to the IJG plan is its ability to pay manufacturers up front for their software at a standard distributor discount.

For its part, IJG guarantees the software to the dealer. A marketing package which maintains each manufacturer's identity, but carries the IJG distribution logo in the bottom corner is being designed.

IJG will further guarantee its software mix to the retailer; in the event that it is unsalable, a dealer may return it to IJG.

The marketing plan further sets the stage for national ad campaigns from manufacturers in support of dealer sales. It provides for a coming of age in software advertising that includes co-op advertising

in which a national manufacturer will share the cost of local advertising.

The Computer Services Division of IJG has for several months been promoting software packages available at a number of "Authorized IJG Dealers." Such advertising has appeared in *80 Microcomputing* where, in October, IJG's two-page spread included a page devoted to Westech Corporation's Small Business Inventory System and the listed 12 dealer outlets, including mail order houses, where the program is available.

The plan remains tentative. Several unanswered questions include dealer discounts, control of such a syndicate of manufacturers and the nearly hostile competitiveness among some manufacturers. ■

Say Hello to 80

If there is a major microcomputer show in your area, be sure to stop by the 80 booth to say hello and to enter our free drawing. We're collecting names, and on July 4, 1981, we'll select one of them to win a Level II TRS-80.

At every show, we award \$100 worth of Instant Software programs to a visitor. The winner from last August's Personal Computing '80 Show was Jon Wolfe of Clayton, NJ. ■

Appeals Court Rules on Data Cash vs JS&A

In Chicago, IL, the U.S. Court of Appeals for the Seventh Circuit upheld the decision of a lower court in the suit Data Cash had filed against JS&A Group, Inc. While the September decision of the Appeals Court agrees that JS&A had not violated a Data Cash copyright, it overturned the reasoning behind the ruling.

Data Cash programmed ROM for a computer chess game which they marketed. They filed the suit in 1979, arguing that JS&A used the same ROM to market a computer chess game at a lower price.

In the earlier decision of the U.S. District Court, Judge Joel M. Flaum indicated that copyright did not apply because the ROM was a machine part. However, the recent decision by the three judges on the Court of Appeals clearly extends copyright protection to ROM programming.

Under the laws in effect at the time of JS&A's actions, the appeals court ruled, Data Cash should have carried a notice on the ROM to warn others that it was copyrighted.

The case will go back to the district court for a judgment on the portion of the suit dealing with unfair competition. ■

Software Copyright Law

Continued from page 48

• It is used only for archival purposes and destroyed if continued possession of the copy or adaptation becomes illegal or inequitable.

As amended, Section 117 goes on to state that exact copies of programs can be leased, sold or otherwise transferred "only as part of the lease, sale, or other transfer of all rights in the program." Adaptations can be transferred only with the copyright owner's authorization.

This is a large change in the law. This section previously put limitations on the author of the software, rather than the owner of a copy of it. As the old law stood,

owners of copyright had no rights, except those a court might grant in an action brought under Title 17.

Since the copyright laws did not include, or even clearly exclude, software as a protected work of authorship, authors had to look to very general laws (often state laws) for protection. Their other choice was to face a fight over the legal interpretation of "work of authorship."

Title 17, as amended, now clearly and fully protects computer programs under all of its sections. This will not destroy any protection an author may have under individual state laws. ■

NEW PRODUCTS

Programmable Video Game

The Maco Micro Module (M3), is a programmable video game.

Hand controls connect to two eight-bit input ports to provide 72 combinations of forward, back, left, right, pull up, push down, twist right and twist left. An audio generator with a hardware toggle may be used to produce end-of-cassette loads, audio prompts, music and game sounds. An accurate real time clock or timer with continuous display may be implemented with the 1/10 second Interrupt generator without tying up the processor.

Comput-A-Sketch, Micro Organ, Brickyard, and Real Time Clock are included on tape.

The interface, two hand controls, expansion cable, instruction manual and cassette sell for \$129.95 from Maco Manufacturing, 1383 Airways Blvd., Memphis, TN 38114.

Tax Help for 80 Owners

Tax/Saver, an interactive income tax program will be introduced in mid-January 1981 by Micromatic.

This new tax package helps the taxpayer

prepare the return in the logical order used by professionals and according to the latest tax rules.

If there is more than one way of doing the return, Tax/Saver allows the user to compare and choose the best result. Tax/Saver compares itemized deductions to national averages, automatically computes certain limitations (on medical deductions and contributions) handles community property, checks for excess FICA and helps determine deductions for dependents. It completes long and short tax forms and is tax deductible.

Tax/Saver is written for TRS-80 16K, Level II. Cassettes cost \$65. Four diskettes for 32K TRS-80s with two disk drives cost \$80, from Micromatic Programming Co., P.O. Box 158, Georgetown, CT 06829.

Updated IBM Typewriter Interface

The 50/80 Interface for connecting a TRS-80 to an IBM Electronic typewriter Model 50, 60 or 75 has been improved, according to Mediamix. It now gets feedback from the typewriter. The driver program that supports this interface uses the feedback to control timing. Benefits include faster typing speed and more con-

trol over the typewriter's automatic functions. The 50/80 Interface is available for the TRS-80 Models I, II, and III.

Mediamix has introduced another version called the 50/80 Interface Plus that uses an EPROM. This eliminates the need to load a software driver program and saves RAM space. The EPROM includes Mediamix's INMOD 3 program which provides upper/lowercase driver, blinking cursor, repeat keys, typewriter-style keyboard and user-definable input length. The 50/80 Interface Plus works with the TRS-80 Model I only.

The MX80 Firmware Interface for the Model I, also from Mediamix, is similar to the EPROM decoder in the 50/80 Interface Plus. The MX80 uses the reserved 2K of lower memory in the TRS-80 keyboard.

No prices were released. For more information contact Mediamix, P.O. Box 8775, Universal City, CA 91608.

Swim Meets with TRS-80

Three Sports programs from Misc. Inc. deal with setting up and scoring swim meets. While timing computers have been used in the past, these programs permit the use of the TRS-80 in timing swim meets.

Misc. Inc. claims that SM3.1 can reduce the time of seeding and printing the heat sheet for a large swim meet by 40 to 70 percent.

Most of the programs require a Level II 16K and a line printer; some programs require 32K and disk. The swim meet programs range from \$50 for cassette to \$100 for an interactive disk program from Misc. Inc., 1530 Butternut Circle, Gastonia, NC 28052.

8000 Not 800 Baud

In September 80 published an announcement of Personal Micro Computers, Inc.'s high speed cassette loader Fastload. It was incorrectly printed that Fastload loads tapes at 800 baud. The loader actually operates at 8,000 baud. Our apologies for the misprint.

The Micromatic 80

If you
just bought
another
printer,
boy are
you gonna
be sorry.

Epson.

The Epson MX-80. It's not just another worked-over rehash of last year's model. It's our top-of-the-line 80-column printer. It's new. From the ground up. And it's the most revolutionary printer to hit the market since Epson invented small printers for the 1964 Olympics in Tokyo. Don't take our word for it, though. Compare. There simply isn't a better value in an 80-column printer. Period.

But here's the fact that's going to stand the printer world on its ear. The MX-80 sports the world's first *disposable* print head. After it's printed about 50 million characters, you can throw it away. Because a new one costs less than \$30, and the only tool you need to change it is attached to the end of your arm.

Now that's revolutionary, but that's only the beginning. The MX-80 also prints bidirectionally at 80 CPS with a logical seeking function to minimize print head travel time

The world's first disposable print head. It has a life expectancy of over 50 million characters, yet it's so simple, you can change it with one hand. And it costs less than—repeat less than—\$30.

and maximize throughput. It prints 96 ASCII, 64 graphic and eight international characters in a tack-sharp 9x9 matrix. And it provides a user-defined choice of 40, 80, 66 or 132 columns and multiple type fonts.

We spent three long years developing the MX-80 as the first of a revolutionary series of Epson MX Printers. We employed the most advanced automatic assembly and machining techniques in existence to produce a printer that is incredibly versatile, remarkably reliable and extraordinarily inexpensive. It's a printer that could only come from the world's largest manufacturer of print mechanisms: Epson.

If it sounds like we're proud of the MX-80, we are. Not only does it do things some of the world's most expensive printers can't do, it'll do them for you for less than \$650. That's right. Under \$650.

And if that isn't revolutionary, we don't know what is.

Mediamix 50/80 Interface.

IBM Selectric Printer

The Micromatic 80 from the Micromatic Corp. is a printer and interface designed for the TRS-80 and other small computers. The printer is a reconditioned IBM Selectric combined with a TTL-based interface.

The printer, according to Micromatic, has a speed of eight to nine characters per second and connects to the keyboard interface port or to the TRS-80's expansion interface.

Micromatic 80 contains all code conversions and timing software and is warranted for 90 days. The Micromatic 80 costs \$795 and is available from the Micromatic Corp., 5147 West 85th St., Indianapolis, IN 46278.

TRS-80 Interface Accessory

E&L Instruments' IF-100 TRS-80 interface accessory provides buffered I/O connections for control, monitoring and testing of external devices and development and testing of I/O devices.

The IF-100 plugs directly into the TRS-80 bus, enabling any TRS-80 incorporating Level II software to be used for practical applications.

The IF-100 contains a built-in power supply to avoid loading down the TRS-80, supplies on-board logic probe, device and memory decoding, bus buffer, control signal buffering and solderless breadboarding facilities for quick interface and control circuitry assembly.

The IF-100 is priced at \$180 in kit form or \$245 fully assembled and tested. The TRS-80 interconnect cable is priced at \$25. The cable is extra. For information, contact E&L Instruments, Inc., 61 First St., Derby, CT 06418.

Programs Manage Radio Stations

The Electric Log and the Electric Bill from The Management perform computer traffic and billing for radio stations on the TRS-80 Model I.

The Electric Log stores up to 500 spot orders and automatically generates daily program logs. Orders may be displayed, changed, deleted or updated at any time.

The Electric Bill stores up to 500 accounts and provides direct access to current status of all accounts. It automatically updates each customer account after entry.

Prices for the programs were not released. For further information, contact The Management, Box 111, Aledo, TX 76008.

Basic Link Facility

The Utility Package for the TRS-80 Model II from Racet Computes provides the user with eight new DOS commands.

XHIT, XGAT, XCOPY and SZAP recover data from bad diskettes. XCOPY provides multiple-file copies, I/O and directory error recovery modes and absolute sector mode. SZAP can be used to examine or change a sector on a diskette. DCS consolidates directories from multiple diskettes into a single display or listing. DISKID changes the name of a diskette. XCREATE creates a file. The Utility Package costs \$150.

Also from Racet is a BASIC Link Facility (BLINK) for the Model I or II. It allows the user to run one BASIC program, and then transfer with one command to another BASIC program without losing variables in memory. The Model I version for 32K (one drive) costs \$25, and the Model II version costs \$50.

Both are included in the new software catalog from Racet Computes, 702 Palmale, Orange, CA 92665.

Eight-Inch Disk Drive

The MS-800 line from Matchless is a line of eight-inch disk drives, compatible with the TRS-80 Models I and II.

The drives have a capacity of 256,256 bytes, with a data transfer rate of 256,000 bits per second. These products also have a track-to-track access time of 10 milliseconds, according to Matchless. The use of four drives provides a storage capacity of two Megabytes on the TRS-80 Model II.

The MS-800 line for the TRS-80 Model I or II costs from \$995 to \$1795. \$995 is the base price for a single drive and documentation. The \$1795 price tag is for two drives, all the hardware that any system would require to adapt to the drives and an operating system. The eight-inch MS-800 line of disk drives is sold by Matchless Systems, 18444 S. Broadway, Gardena, CA 90248.

MSL/II-800 Eight-Inch drives for Model II

Disk BASIC Compiler

ACCEL2 is a Disk BASIC compiler. It produces machine code translation of selected Disk BASIC statements and functions in all four types of variables.

ACCEL2 has six diagnostic messages and a set of local/global compilation options to increase compatibility with subject programs and to control output code growth.

The ACCEL2 compile-time routines are self-relocating and occupy 5120 bytes, while the run-time component takes only 1024 bytes.

The compiler is supplied on cassette and sells for \$88.95. ACCEL2 was recently developed in Britain by Southern Software and is now being marketed in the U.S. by Allen Gelder Software, Box 11721 Main Post Office, San Francisco, CA 94101.

Stock Analysis and Mass Mail Programs

A new stock market system from Galactic Software is designed for the active trader. It tracks selected issues, and reflects them against the overall market.

The program is a guide to indications, and is not to be used as a sole recommendation to buy, sell or hold an issue, according to Galactic.

The user inputs setup data from Standard and Poor's stock guide or Value Line. Daily issue data such as highs, lows, close and volume are input from a newspaper. The user also inputs daily overall market volume and "closing Dow" from a newspaper. The system analyzes a given issue by comparing volume and price changes of the overall market. The system

will also compare an issue against itself, allowing the user to spot unusual activity.

The Stock Market Monitor System is designed for the TRS-80 Model I and Model III. It is available for 16K machines on cassette and 32K machines on disk. The cassette version costs \$89 and the disk costs \$99.

The Mass/Mail System, also from Galactic Software, allows 3500 entries per expansion drive up to a total of 10,500 on a four-drive system.

The system supports two standard label formats and two standard directory formats. The user may design an additional output format.

All inputs are taken through a full word processing editor with transparent cursor, type-over, insert and delete. Data files are sorted by first name, last name and zip code. Retrieval is by alphabetical or zip code order, plus any of six other circuits. Access by a key field is always less than ten seconds, according to Galactic.

The Mass/Mail System is designed for the TRS-80 Model II. It requires 64K and from two or four disk drives. Files created by the system are compatible with Galactic's Model II Mail/File System. Prices were not released.

Both Mass/Mail and Stock Market Monitor Systems are available from Galactic Software Ltd., 11520 N. Port Washington Rd., Mequon, WI 53092.

Energy Efficient Programs for Construction

Two new construction industry programs by Disco-Tech calculate not only a building's energy efficiency, but according to Morton Technologies, also calculates cost effectiveness.

Though designed to comply with California's Title 24 energy legislation controlling building design, heating/cooling equipment and lighting, both NRG-1 (residential) and NRG-2 (commercial) programs are applicable outside of California, as well.

According to Disco-Tech, NRG-1 printouts may be submitted directly to local building departments.

TRS-80 Model I hardware required is 48K with two mini-disk drives and a line printer. Cost of NRG-1 is \$650. The price of NRG-2 is \$450. The package price for both programs is \$1,000. The programs are available from Disco-Tech, Morton Technologies, Inc., P.O. Box 11129, Santa Rosa, CA 95406.

COMPUTER PROGRAM ASSOCIATES

Presents

HDOS-2™ Hard Disk Operating System for Model II With CORVUS Drives Works With TRSDOS* and Microsoft BASIC, Does Not Replace It!!

No need to abandon your TRSDOS software when you get a CORVUS hard disk drive. With HDOS-2 you can use your existing programs with only minor modifications. There are no changes to TRSDOS 1.2/2.0 or BASIC! HDOS-2 resides in only 1K of high memory, and is accessed by USR calls from BASIC. Simply replace your GET and PUT statements with HDOS-2 commands, and you're ready to go. HDOS-2 is supported by a complete set of operating system commands, including a hard disk SUPERZAP. This is the system you need to make the most of your Model II with a hard disk drive. HDOS-2 can open up new frontiers for your business software!

TRSDOS Commands: HBASIC, HCOPY, HCREATE, HOIR, HFREE, HINIT, HKILL, HRENAME, HZAP
BASIC Commands: (Defined Functions): Open, Gat, Put, Lot, PEEK, POKE, SCR, DUMP, CURSOR

Price: \$125 for all utilities (source code extra).

Financial Accounting Packages: Our accounting packages were designed by a C.P.A. with years of experience in accounting systems. All packages are self-booting and menu driven, and are designed for use by persons with little or no computer background. Each package is designed for a 2-disk system, and comes with our internal documentation (file layouts, variable descriptions, etc.), allowing easy modification for form alignment, customizing, etc. Unlike Radio Shack programs, these have a consistent structure and are designed with customizing flexibility in mind. Error trapping routines reduce operator errors, and review of each transaction is allowed before acceptance by the system. Reports print on 8½" x 11" paper for easy handling. Manuals are included in the price.

**Accounts Receivable
with Billing**
Model I: \$250
Model II: \$350

Invoices, Credit Memos, Statements, Aged Accounts Receivable, Daily/Monthly Sales Report (Detail & Summary by Category), Sales by Salesman, Maintenance Report, etc. Allows Balance Forward and/or Open Item methods, with full customer inquiry at all programs. Each invoice can have up to 35 different line items, with automatic extension of quantities, totaling, computation of sales tax and freight, etc. Invoice and statement forms are available for use with system. Up to 1200 customers, no limit on transactions.

General Ledger
Model I: \$175
Model II: \$275

Grouped Balance Sheet and Income Statement, General Ledger Audit Trail, Trial Balance, Operating Income Statement with Percentages, Payroll Tax Report (for 941's, W-2's), etc. This system is easy for the non-accountant to use, with an automatic credit to cash during check entry, and validation of general ledger account numbers. Account numbers up to 5 digits (including alphanumeric) are allowed, with no requirements as to sequence or ranges. Up to 400 accounts, 1200 transactions per month.

**Accounts Payable
with Checkwriting**
Model I: \$250
Model II: \$350

Checks with remittance advice, Accounts Payable Detail by Vendor, Aged Accounts Payable Summary showing Cash Requirements, Vendor Maintenance Report, etc. This system does everything! Check runs may be for all or selected vendors and pay dates for individual invoices may be changed at any time. Invoices may also be paid by batch. Interactive with General Ledger, with automatic entries to cash and accounts payable. Allows up to 16 general ledger accounts per invoice, with discount computation and default payment terms by vendor. Up to 500 vendors.

Also available — General Ledger with Job Costing, Accounts Receivable with Cycle Billing and others.

To Order: Call or write Computer Program Associates at the
phone/address below. Shipments normally made same
day. C.O.D. orders add \$10.

Electronic Networks

"There were buttons and switches everywhere—buttons to call for food, for music, for clothing. . . . There was the button that produced literature. And there were of course the buttons by which she communicated with her friends."

*from "The Machine Stops"
by E. M. Forster*

by Nancy Robertson
80 Staff

Those lines from E. M. Forster's short story were written before the invention of the computer and before the surging growth of communications networks. Through electronic networks of terminals, microcomputers and central computer banks, we are entering an age when science fiction can become reality.

Electronic networks and communications aren't as new as they seem. From your social studies class in elementary school, you should remember that in 1838 F. B. Morse demonstrated his invention—the telegraph—and electronic communications were born. A few decades later Alexander Graham Bell invented the telephone.

Today four out of five homes in the United States have telephones. And most of us have experienced the mix of excitement and anxiety that are brought on by the delivery of a telegram. With the computer connection, electronic communications have entered a third dimension.

Quoting figures from a recent International Data Corp. study, Walter Anderson of the U.S. General Accounting Office points out that "There are already 2.6 million general purpose, intelligent terminals (including micros) involved in computer networks in this country."

Transfer of Data

How do the networks operate, what do they offer, and how can TRS-80 owners participate?

To use the industry jargon, these networks are used for data communications and electronic mail. These terms overlap a great deal in meaning and usage. Data communications, often called datacomm, refers to the electronic transfer of data. Data, of course, is "factual information used as a basis for reasoning, discussion or calculation." Electronic mail refers to messages generated, transmitted, and/or delivered electronically. A message is any communication "in writing, speech, or by signals." Essentially both datacomm and electronic mail are electronic communications.

A few legal eagles, however, insist that electronic mail refers to the electronic communications that pass through the hands of the U.S. Postal Service (USPS) and other public utilities. In this sense of the term, the prime example is the Mailgram service offered jointly by Western Union Electronic Mail, Inc. (WUEM), a subsidiary of Western Union, and USPS.

To send a Mailgram, customers telephone WUEM with an addressed message; WUEM transmits it electronically over wires, cable and/or satellite to a post office; the electronic code is printed and hand delivered by the mailmen. Mass mailings such as credit card and magazine subscription billings are often sent as Mailgrams.

Earlier this year Tandy made a business agreement with WUEM allowing TRS-80 users to connect via modem to Mailgram service. Tandy has created software that will generate Mailgrams at 300 baud. Included in the package is a credit application to be filed with WUEM. Once a line of credit has been established, mail lists and letter texts

can be input by an 80 into WUEM's central memory bank in McLean, VA. Mass mailings can then be initiated from the TRS-80 keyboard.

Mailgrams may give way to the USPS's E-COM. August 15, 1980 the USPS Board of Governors voted to begin E-COM (Electronic-Computer Originated Mail) service by January 4, 1982.

The original E-COM proposal, which was presented two years ago, suggested using the existing Mailgram equipment to expand the system under complete control of the Post Office. The recent decision will open the supply of electronic transfer equipment, central storage computers and wire carriers to the best bidders. If companies other than WUEM supply the system, the TRS-80 hook-up will probably have to be modified and renegotiated. But 1982 is a long way off in terms of computing and software advancements; many other developments may take place in the meantime.

Public or Private

Right now there is a battle brewing between public and private communications networks. In May, the Federal Communications Commission (FCC) released its decision on the Second Computer Inquiry. In the past the FCC has regulated communications suppliers, such as AT&T. In May, the commission decided to deregulate private suppliers of "enhanced" electronic communications systems. The decision applies to companies such as CompuServe, which offers customers a variety of communication services through their network's central computer bank.

ADVENTURERS! RISE TO NEW DEPTHS!

At Last, 3 Dimensions!

Deathmaze 5000 and Labyrinth are the first in a new breed of adventure. Instead of wandering through the English language, typing GO EAST or GO WEST, you move through a colossal maze represented on the screen three-dimensionally. Hallways recede into infinity or come to dead-ends. Doors open to right and left. Pits open in floor and ceiling. As you encounter objects, monsters, and mayhem, one or two word commands may be used. The command set is extensive and sophisticated. The proper commands allow the solution of problems and the manipulation of objects. The improper choice of words could spell the end. . .

MACHINE LANGUAGE SOPHISTICATION

Deathmaze 5000 and Labyrinth are written in machine language. They are both incredibly fast. All the features expected of great adventures are built in, including SAVE GAME and a blinking cursor. All versions include relocation modules for use with disk systems.

Deathmaze 5000 places you on the top floor of a five story building. Each floor is a maze of twisting passageways. Floors are connected by elevators and open pits. You have but one goal. **ESCAPE ALIVE!** Where is the only door out of this nightmare? Monsters, bats, mad dogs, hunger, and many more horrors plague your every step as you struggle to escape the most complex adventure ever written.

TRS-80 Level II 16K cassette \$12.95
APPLE II or APPLE II PLUS 32K cassette \$12.95

Labyrinth places you in a maze of gigantic proportions. But you are not alone! A minotaur searches for you, seeking a grisly meal. You must find weapons, spells, and treasures. You must deal with ghosts and cave gnomes. You must avoid the minotaur until the moment is right for the final battle.

TRS-80 Level II 16K cassette \$12.95
APPLE II or APPLE II PLUS 32K cassette \$12.95

P.O. Box 2574 Chapel Hill, NC 27514
(919) 933-1990

★ ★ ★ CONTEST ★ ★ ★

REWARD!

This man escaped a fate worse than death. He was the first, but we hope not the last. From his condition, you would never realize that he designed **Deathmaze 5000**. Those few others who survive may send their correct solutions to us. On December 31, a drawing will be held. Six intrepid adventurers will win their choice of three Med Systems programs and a shirt silk-screened with the above logo and the words "I survived Deathmaze 5000". Only the correct solutions are eligible. All judgements final. Please enclose a SASE for return of solutions or notification of correctness. All winners will be contacted directly.

SATISFACTION GUARANTEED!

All Med Systems Software products come with a 14 day moneyback guarantee. If for any reason you are not satisfied, return your order within 14 days for a prompt and cheerful refund.

ORDERING INFORMATION

Orders are processed within two working days. Mastercard and Visa card holders please remember to include the expiration date. We pay all postage and handling within the U.S., Canada, and U.S. territories. European orders please include \$2.00 for air post.

Ask about our other adventures. These include Samurai, Reality Ends, Bureaucracy, and The Human Adventure.

Please send the following 3-D adventures:

☐ Deathmaze (\$12.95) \$ _____
☐ Labyrinth (\$12.95) \$ _____
TOTAL \$ _____

☐ Please send your catalog of programs and products, as well as details of the Deathmaze contest.

PMC-80

Level II 16K at \$645

SOFTWARE COMPATIBLE

- Reads all Level II BASIC tapes
- Reads all SYSTEM tapes
- Full range of peripherals
- Video output for monitor and TV
- Optional FASTLOAD at 8000 baud
- Optional Upper/Lower case

The PMC-80 is a "work-alike" computer to the popular TRS-80[®] Model I, Level II by Tandy, Radio Shack. The PMC-80 has 16K bytes of RAM and the complete Level II 12K BASIC ROM by Microsoft that makes it 100% software compatible with programs from Radio Shack and from the hundreds of other independent suppliers. The built-in cassette player reads standard Radio Shack programs for the TRS-80[®].

Sold through computer stores.

The PMC-80 will operate with any of the many peripherals Radio Shack and other independent vendors have invented to plug into the TRS-80[®]. Most importantly, the Interface Adapter permits Expansion Interfaces with memory expansion to 48K to be added. An Expansion Interface will also permit the addition of Radio Shack compatible 5¼" disks and disk operating systems, RS 232, printers, etc.

*TRS-80 is a registered trademark of Tandy Radio Shack.

Personal Micro Computers, Inc. ✓422
475 Ellis Street, Mountain View, CA 94043 (415) 962-0220

Above: The inner sanctum...CompuServe, Columbus. Left: DEC hardware and tape backups at CompuServe.

USPS may not be pleased with the FCC decision, which will allow private competition with their E-COM service. GTE Telecommunications Corp. and Tymnet, Inc., which are common carrier suppliers of wire, telephone lines and satellites for most communications networks, are entering the mass mail market this year.

If the competition becomes too heated, some fear USPS will tie up the deregulated suppliers of electronic mail and the FCC in a judicial battle. Under the Post Office's Private Express Statutes, USPS has sole right to carry letters; and letters are broadly defined as "messages directed to specific persons or addressees and recorded in or on a tangible object."

In the meantime, business and industry are using private computer communications networks in a variety of ways. Perhaps the most common use is interoffice communications. For instance, major airlines use networks for flight reservations. Labor unions are using networks to share wage scale information as pay varies from region to region or company to company. The Green Thumb Project, a network sponsored by the U.S. Department of Agriculture, the University of Kentucky and the Weather Service, is designed to help farmers plan plantings and crop sales.

Through time-sharing networks such as CompuServe Information Service, Columbus, OH and The Source, McLean, VA, micro owners can get into the action. They can send messages to friends and associates, even electronic editions of daily newspapers, access programming languages, play adventures, get the latest stock reports, copy recipes from *Better Homes and Gardens* and record biofeedback.

Although the computer networks that exist today differ in size, application and complexity, they all are variations on the same theme. Terminals, or micros functioning in the same role, are connected by common carriers to central computer banks. Messages or data travel from the terminal across wire or satellite to the central processing unit of a computer bank. The central computer examines the information, responds to the original terminal, or forwards the information to another computer or terminal.

Suppose for a minute that you have just subscribed to CompuServe Information Service. While you're looking over the latest stock reports, you recall a friend on the West Coast. He too subscribes to CompuServe. You've been meaning to give him a call. You want to tell him that a mutual friend has resurfaced in your area.

Being a clever guy, you decide to send your friend a cryptic line: "Recalled to Life: Smart Hands." How does the message get to San Francisco from New Hampshire?

The message and its address are printed on the CRT. With a modem connected to your micro and the access software loaded, you dial the local CompuServe number. The video page is arranged in a packet of bytes, translated to electronic frequencies, and sets off across the telephone lines at the rate of 300 baud.

At the local exchange, the packet is switched to another line, wire or satellite and travels on to the central computer bank in Columbus. The first few bytes read by the central computer indicate that it is a message to be posted to another subscriber.

"Recalled to Life: Smart Hands" is stored in the West Coast publication's electronic mailbox (file space in the network's main memory that is reserved for a particular subscriber) in Columbus. A confirmation is returned to New Hampshire that the message has been posted.

Sometime later, your friend hooks up to CompuServe from his office in the bay area. The first words that appear on his video display tell him he has mail.

"Recalled to Life: Smart Hands" then takes off on another trip across country. Riding the wires to Frisco, the packet switches to a local line, reaches the modem, is translated from electronic frequencies to binary digits and appears on your friend's CRT. Let him cogitate over this awhile.

Software Connection

Radio Shack is offering retail subscription sales to CompuServe Information Service. It has developed Videotex software which allows micros to function as terminals, and is also retailing the TRS-80 Video-

tex Information Terminal.

The Videotex Information Terminal will be shipped for the first time this month. It is Radio Shack's first dumb terminal, designed specifically to access CompuServe.

A terminal is simply an input/output de-

vice for a network. It can be used to input data and receive and display data or other information from a central, host computer. Dumb terminals can perform only these basics, which are called on-line functions.

Kenneth Bosomworth, president of the

International Resource Development Co. and editor of the *Electronic Mail & Message Systems* newsletter, Washington, D.C., explains that "As you type your name on the keyboard of a dumb terminal, it will appear on the screen. But all alphanumeric inter-

The Columbus

Jeffrey Wilkins of CompuServe, Inc.

In their broad-winged metal helmets and thick-clothed jerseys with chrome badges, the fire crew waits uncomfortably in the lobby. They have come to run a routine monthly check for electrical fire hazards. A closed-circuit TV scans the room, displaying the back of the receptionist who sits in a booth similar to a judge's bench; the firemen shuffling about in their heavy boots on the thick carpeting; the head of security speaking into his walkie-talkie; and a woman carrying a briefcase and camera. This is the foyer of CompuServe, Inc., Columbus, OH.

I am waiting for security clearance, an identification card and publicity director Rich Baker to guide me through the central offices and main computer bank. Baker comes down the wide stairs and introduces himself. The receptionist gives me a nametag that attaches to my lapel.

So Much Security

Even Baker needs permission to enter that part of the building housing the computer bank. For the second time, I question the reason for so much security. Few of the 350 company employees are permitted to enter the computer centers without approved escorts.

Inside, most of the long room is filled with row after row of Digital PDP-10s and PDP-20s—roughly half of the company's 21 mainframes. For backup, every piece of data stored in the PDPs is also stored on reel to reel tape. The blue reels stocked on shelves cover nearly a third of the room. This room and another like it are the heart of CompuServe's computer network.

From the computer bank, I am taken to meet CompuServe, Inc.'s president, Jeff Wilkins. He is surprisingly young to head a company that had revenues of \$20 million in 1979. He has been president of CompuServe for nearly all of its 11-year history.

Wilkins explains the company's birth and development succinctly. CompuServe was originally established as a subsidiary of Golden United Investment Co., to provide the parent company with data processing and to sell the same services elsewhere. In June, 1975, CompuServe spun-off from Golden United and became an independent publicly held company. A half of a share sold for \$1 at that time. Within a year the stock split and CompuServe had 12,000 shares outstanding—the same total number of shares Golden United had at that time.

In 1979, CompuServe's stockholders

agreed to sell the company to H&R Block, Inc., the tax preparation company. The purchase was made May 12, 1980. Wilkins believes Block bought CompuServe "to put themselves in a marketplace that is growing faster than the tax markets."

Wilkins' history with CompuServe began in 1970. That year he left Arizona, where he had received his graduate degree in electrical engineering, and where he and friends had established a solid business designing and building home alarm systems.

"My father-in-law was involved in the holding company that started CompuServe. He wanted me to come out right away and start the data processing company. The difference between electrical engineering and computing didn't occur to him. I told him that I didn't know anything about computing, but I had a friend who did."

Third Employee

That friend was the first employee of CompuServe. Wilkins was its third. "I liked what I was doing in Arizona," Wilkins said. "I enjoyed having my own company, so I really didn't want to come out, although by this time both my friend and my father-in-law were really urging me to come."

Finally Wilkins was offered \$1.5 million in equity to get CompuServe started. He decided to take a closer look at the prospects. "I set down the ground rules—I'd have complete control." He accepted the position and moved to Columbus.

Wilkins has maintained the same degree of control since the merger with H&R Block. "I'm still the Chief Executive Officer and am responsible for making decisions about strategy and growth. The main difference is that instead of reporting to the board of directors at CompuServe, I report to H&R Block's executive vice president and am a member of their board."

"One of the things I've always enjoyed about this business is how quickly it

pretation is done by the host which returns the information to the CRT or printer."

But some terminals have more intelligence.

When a terminal is not linked to a central computer, it is off-line. If a terminal can per-

form off-line functions, it is an intelligent terminal. The number of off-line functions can vary from basic editing to the general purpose applications of a microcomputer.

The generic term "videotex" refers to uniform screen formatting for purposes of data

transmission. Tandy's Videotex products format screens of 32 characters across by 16 lines deep. These dimensions should reproduce on any CRT without dropping any characters.

Walter Parkerson, who wrote the soft-

Connection

changes. You have to have the ability to anticipate, to be two or three years ahead of the market." From data processing, CompuServe expanded into a service offering a combination of hardware and software to business and industry.

CompuServe's bread and butter has come from over 650 customers in business and industry. Time and time again, their publicity refers to their many Fortune 500 clients. In business there are diverse as mining, investment banking and fiberglass, their customers include AMAX, Greenwich, CT; Goldman Sachs, New York, NY; and Owens Corning Fiberglass, Toledo, OH. Government agencies, such as the Department of Transportation, are also clients.

AMAX, a company which is between 35 and 40 on Fortune's list of giants, has annual sales of approximately \$4 billion and profitability, of about a half billion, according to their director of research, John Thornton. CompuServe has maintained the company's hardware and software, and provided an international communications system since 1973. The communications system hooks up 350 computers around the world, including about 15 which are located underground in mines. Thornton believes, "CompuServe is one of the best—if not the best—time-sharing companies in the country."

Referring to CompuServe's industrial and business background, Wilkins states, "As we watched the industry develop, it became apparent that these new applications would lend themselves to a consumer market."

Under CompuServe, Inc.'s umbrella, the CompuServe Information Service (formerly called MicroNet) offers consumers—micro and terminal owners—information and communications facilities through the company's time-sharing network. The rate for the service is five dollars per connect hour.

Under the heading of news, Associated Press (AP) wire service, electronic edi-

tions of several newspapers; recipes and meal planning from *Better Homes and Gardens*, and the Tandy/Radio Shack newsletters are available.

Communications services include the ability to post and store messages electronically, and a network bulletin board which serves the same function as classified advertising.

A category of services designed specifically for computer hobbyists offers games, software catalogs, programming languages, etc. (The hobbyists' time sharing service is now called MicroNet—just to make things confusing.)

Presently, Radio Shack is the only retail outlet for CompuServe Information Service subscriptions. Radio Shack's outlets are selling the subscriptions along with the software to allow all micros to access the network. Starting kits assign user identification numbers and passwords.

In another effort to reach the consumer market, CompuServe Information Service will also be offered via cable TV. A pilot of a two-way cable service is being conducted by Warner/Amex, CompuServe Inc., and Atari, Inc. Warner/Amex, Columbus, OH, owns Qube, the interactive, two-way cable TV station which will carry the service.

High Level Technical Skills

CompuServe Information Service is a logical extension of the company's products, yet Wilkins points out that it requires a different mix of skills than setting up industrial research or communication systems.

"CompuServe has been successful because of the high level of technical skills. Even in the beginning, our technical skills were high, but marketing was low. We have been able to move into the personal computing market so easily because of our technical people.

"Part of my job here is to keep a good mix between the wizards and the suede shoe boys, or between the machine-ori-

ented people and the people-oriented people.

"Nobody knows the size of the personal computing market yet; nobody knows what's going on out there. But I don't think there's room for very many players right now—although there may well be, if the market continues to grow.

"There are two things every consumer wants to know about anything he can buy: What does he get from it? And how much does it cost? The changes that will come to microcomputing because of computer networks will be evolutionary in nature. They will be brought on by the market, not by technology. There is still not a mass consumer market."

With names like Goldman Sachs, the Department of Transportation and AMAX on the satisfied customers list, consumer and hobbyist markets are just the tip of CompuServe's iceberg. It's these business and industry giants that account for the routine fire checks, the plush carpeting and the maximum security measures.

Versatile Information Manager

Thinking of buying specialized programs for applications such as mailing lists, inventory, or maintaining personnel records? VIM can perform these and many other tasks, and the best part of it is that you only pay for it once!

Simplify the task of maintaining your data by putting VIM to work on your system. VIM is very easy to use and its flexibility will permit you to perform a great variety of data processing jobs with no extra programming. It runs on the TRS-80* Model I, 32K (or more) disk based system.

MODULE 1 (database manager) \$59.95

- database definition with up to 240 character records and 30 fields
- alphanumeric and numeric fields
- add, update, and delete records
- search on any fields or their combinations using 3 logical and 10 relational operators
- modify, unload, or delete records retrieved by a search

MODULE 2 (sort utility) \$29.95

- written entirely in assembly language for fast operation
- sort on any combination of fields in ascending or descending order

MODULE 3 (report generator) \$29.95

- user defined record and page formats
- optional summary for numeric fields

VIM (modules 1-3 and 100+ page manual) \$99.95

PUREZZAP

is a machine language, highly advanced disk sector modifier. Incorporating 4 additional utilities most desired by users. 35 or 40 track, 1 or 2 drives.

- Zero out all unallocated sectors.
- Zero out all killed directory entries.
- Hash code displayed upon entering any filespec.
- Instantly kill format, copy, basic and all system files except boot and dlr.
- PUREZZAP reads, modifies and writes any sector.
- Lightning fast cursor movements in 4 directions whether modify mode or not.
- Instant toggle between drives.
- Continues sector compare of any two locations.
- Continues search for the occurrence of any byte.
- Automatic single or multiple duplication of a modified byte.
- Forward or backward 1 to 9 sectors at a time >>>instantly<<<.
- Fantastic, easy to read, visual display with the relative byte position displayed and updated continuously during any function.
- A super menu and more with easy to understand documentation.

Shipped within 24 hours on a diskette for only \$12.95. Add \$1.00 for handling in USA—\$3.00 outside.

ware for Radio Shack's Videotex terminal, says it could be called "a limited intelligence terminal." For video display the terminal plugs into any television set via the antenna outlet. It can be attached to a printer as well. The terminal has a built-in modem and comes with either 4K or 16K memory.

Before it goes on line, the memory can be filled with whatever you wish to save or transmit. After communicating with the computer bank, it will save all of what has been received—unless the buffer capacity is exceeded. On the 4K model, that is eight video pages. On the 16K, it is 32. Each video page consists of 512 bytes and forms a packet when it is transmitted.

Tandy's interest in terminals relates to the computing industry's crystal ball. The Yankee Group, Cambridge, MA runs a profitable business prophesying what will come next in electronic communications. They are one of several voices predicting that home users will be interested in network communications, but not necessarily in computing. Editor Bosomworth points out that "The general purpose nature of microcomputers requires more training than terminals designed for specific communications needs."

At CompuServe, where both terminals and microe fit into the network, Rich Baker, public relations coordinator, has a different perspective. "I think you're going to see information terminals catch on. Terminals are more consumer oriented. You don't need to know as much computer talk to operate them. And they'll be less expensive.... Tandy's target price for the Videotex terminal is \$199. Plus, terminals are easy to hook up to networks.... Personal comput-

ers will still be providing something for those people who are interested in computing."

President Lewis Kornfeld suggests that Radio Shack may be considering other terminals. "Videotex is on the market by itself simply because it's come out before anything else. We are considering other things along the same lines, but it's a fast moving world out there—and hard to predict."

The Yankee Group released several of their forecasts prior to a recent symposium on The Home Information Utility. If they are correct, the computerized home environment of the near future will be similar to the home described by E. M. Forster in "The Machine Stops." In their newsletter, *Yankee Ingenuity*, they printed the following example of the effect of computer networks on daily life:

"You will have programmed your home that you are awake. Your flat screen television monitor will switch on... It will tell you that you are scheduled to depart on AA Flight 156 to San Diego. Your home will have already called the Sabra System and found that the departure time is delayed 40 minutes. It will tell you the best route to the airport to avoid the traffic, the weather in San Diego, your agenda for the day, who you are meeting, and the overnight quarterly results of your division."

Back in the networks and information communications of the present, your hypothetical friend on the West Coast has posted a response to your cryptogram: "Vive les digits!" ■

Puts sophisticated business strategies at the fingertips of all TRS-80 Level II owners! **FINPLAN: A Financial Planning Program for Small Businesses** is the most complete financial planning program available.

Here's why . . . **Developed by an expert:** The author, Robert Montgomery, is president of a management consulting firm and a recognized authority on new product planning. **Easy to use:** Data can be entered from normal balance sheet statements. Within seconds, **FINPLAN** will provide financial projections for up to 5 years. **Versatility:** Are you thinking about modernizing equipment, expanding into a new product line, or starting a new business from scratch? Will your plans run you out of business, out of cash, or on to the Fortune 500 list? **FINPLAN** will answer these and other financial questions before you invest a dime. **Extensive documentation:** You don't have to be a financial wizard to use **FINPLAN** because it comes with 80 pages of documentation.

Presented in a step-by-step format, the documentation is a great learning tool for those who need it or a dynamic applications tool for getting the most out of **FINPLAN**. And, **FINPLAN** is reasonably priced. #05103, TRS-80 Level II cassette, \$69.95; #05108, TRS-80 Level II Disk, \$74.95.

Sible Hedingham
Halstead, Essex
CO9 3NP

Now that we've been over the methods of CSAVE and CLOAD, we can take steps which lead to longer programs. I am going to explain the programming methods which you'll find in longer programs, and show some short examples which you can use in programs of your own.

Are you ready for the Force? The instructions we're going to look at this month are among the most powerful instructions in BASIC, and your TRS-80 has one of the most complete BASICs I know.

The IF... THEN Statement

The IF... THEN... ELSE instruction allows a computer to make a comparison and a decision. The comparison will be between two quantities, strings or numbers, and the decision will be about what to do next. The best way to show how this works is with an example (Listing 1). Let's go through it carefully.

Lines 10 through 60 print out the rules of a very simple game. A lot of improvements can be made, and we will need to make them if we want the game to be interesting, but for the moment, let's take just one step at a time.

The new parts of the program start at lines 70 through 90. The program prints the word LION and waits for your reply to be

typed and ENTERED in line 80. The reply which you type becomes the variable N\$, which can now be compared with the correct answer, which is the word PRIDE. Line 90 does just this: If you typed PRIDE, correctly spelled, then N\$ = "PRIDE", and the program will print the words WELL DONE and end.

If you typed anything but PRIDE, the rest of line 90 is ignored, and the program shifts to line 100 to tell you that your answer is wrong. You are then asked to try again, and the program returns to line 70 by using the command GOTO 70.

Try it, giving a correct answer on one run and an incorrect answer on the next run, so you can see how the computer treats these different cases.

Meanwhile, what about ELSE, which only a few computers feature in their BASIC? The BASIC statement in line 90 used only IF... THEN. // N\$ = "PRIDE", then the program goes on to complete the other instructions in line 90. // N\$ is not "PRIDE", then the rest of line 90 is ignored and the next line executed is line 100. That last section of line 90 is rather important, incidentally. If you omit the :GOTO 120, when you answer PRIDE the computer would print:

```
WELL DONE
WRONG, I'M AFRAID—TRY AGAIN
LION ?
```

A correct answer should stop this simple program, and only an incorrect answer should permit the entry of another answer. You have to remember when you write a program that unless you command it otherwise, the program will always step from one line to the next in numerical order.

The ELSE Command

That big, big BASIC of the TRS-80, however, lets you write lines 90 through 120 in a much shorter form, which is shown in Listing 2. This can now be the last line in the program. Type in DELETE 100-120, hit ENTER and then type in your new line 90. Try it; this time, if N\$ is not "PRIDE", the rest of the line is ignored only as far as ELSE, then the section after ELSE is carried out. Using IF-THEN-ELSE in this way can save a number of lines in your program.

Computer Comparisons

In addition to the use of IF-THEN-ELSE, another innovation is the use of the equality sign in the expression IF N\$ = "PRIDE". This is not quite the same use of the equality sign that we've used until now. When we have a command like IF N\$ = "PRIDE", the computer compares the two stored strings, N\$ and PRIDE, letter by letter, to determine whether they are identical. If one string has a space or a comma or a period and the other hasn't, then they're not identical. We'll later look at ways around that problem.

The equality sign comparison isn't the only one which can be made. We can also write IF N\$ > "PRIDE" or IF N\$ < "PRIDE", though these statements would not be used in this game. The > sign means greater than, and when it's applied to a string it means that the word used for N\$ would come later in an alphabetical index than the word PRIDE. For example, if N\$ = "ROAR", then it comes later in a list than PRIDE, because R follows P in the order of the alphabet. If N\$ = "PRUDENT", it also comes later, because U comes after I in the alphabet, even though both words start with PR. The < sign means less than, and

"Some owners of other computers would give both ears and a tail for the TRS-80's edit facilities."

works exactly in reverse. To complete the story, we can combine these symbols as shown in Table 1.

Clearing Methods

Since we're writing programs of 12 lines and more, we need to be able to clear one program (after using CSAVE to preserve it) in order to start all over again with another program. Type NEW and hit ENTER—it's that easy. This doesn't actually erase the program the way you can erase a tape, it erases only the instructions inside the computer which act as a signpost to the start of the program. Your old program is completely wiped out when you enter a new one of the same length or longer, or when you switch the computer off and on again later.

Some owners of other computers would give both ears and a tail for the TRS-80's edit facilities. We're not going to cover all of the editing methods at once, but it's time you met the main one.

With your program set up, type EDIT 70 and hit ENTER. This will result in the number 70 being displayed on the screen with a cursor (dash mark) beside it. Press the space bar and release it, and the cursor moves right. Press again, and the first letter of PRINT appears. Another press and the second letter appears. Looks as if you're typing all these letters with the space bar, doesn't it? The backshift arrow (←) allows you to go back until just the number shows, the space bar allows you to go forward to show more of the instruction.

Space bar your way to the end of the line and then backspace until the last quotation marks disappear but you can still see the entire word LION. Press the letter I on the keyboard, but don't hit the ENTER key. Backspace until the L of LION disappears, leaving only the first quotation marks visible. Now type the word WHALE and hit ENTER. The line should read:

```
70 PRINT "WHALE"
```

The new word has been inserted (I for INSERT) between quotation marks. In this example, we first had to delete by backspace-

Sign	Meaning
=	exactly equal to
A<B	A less than B (earlier in the alphabet)
A>B	A more than B (later in alphabet)
A<>B or A><B	A not equal to B
A<=B	A less than or equal to B
A>=B	A more than or equal to B

Program Listing 4

ing after the I had been pressed, but it's also possible to add letters, spaces or whole words into a line by using the I key and then typing in the new material. You can alter a line as much and as often as you like in this manner, but if you interrupt a program to alter a line, you will have to reRUN the program from the beginning.

Now that we've changed line 70, we need also to change line 90. Type EDIT 90 and hit ENTER. Use the space bar to step along to

the E of PRIDE, then press the I key. Step back, using the back arrow, until the P of PRIDE has disappeared, then type in SCHOOL and hit ENTER. Line 90 should now have "SCHOOL" in the place of "PRIDE", and the program makes sense again.

Increase the Beasts

One of the problems of our program in Listing 1 is that it's limited, to say the least;

not the sort of thing that's likely to hold your interest on a long rainy afternoon. Perhaps we can use a new instruction to pep things up a bit, starting with a method for using more animals.

Look now at Listing 3. There's a new instruction in line 70, READ Q\$,A\$. The READ instruction tells the computer to look for data, and the data must always be labeled by starting with the word DATA. There's no comma after DATA, but there must be a comma after each word in the list except for the last one. Because we're asking the computer to read string variables from this list, we have to enclose each word in the list within quotations. Where the comma after each word is not inside quotation marks, it indicates to the computer where each word ends.

In line 70 the computer assigns values to the string variables Q\$ and A\$. First time around, it makes Q\$ identical to LION and A\$ identical to PRIDE. To do this, the computer simply makes the first string variable, which is Q\$, equal to the first word read from the data line, and the second string variable, A\$, equal to the second word read from the line. We can have a line 70 which looks like this:

```
70 READ Q1$,A1$,Q2$,A2$,Q3$,A3$
```

This would have read three sets of question and answer words, or we could have read all six sets in one operation.

As it is, we chose to read just one question and one answer in line 70, and in line 80 we print the question word. Since Q\$ is assigned to LION in line 70, that's what comes up on the video screen. We don't ask for the answer word (A\$) to be printed, so it isn't. At line 90 you're asked to input your answer, and line 100 then compares your answer with one, PRIDE, which has been taken from the list.

We've made a few changes in line 100, also. If your guess is correct it is announced on the video screen, and the instruction GOTO70 tells the computer to read another pair of words. That's what makes this READ ... DATA pair of instructions so useful, each READ is a new one, with new information coming in from the data line or lines. This time, Q\$ is set equal to WHALE, and A\$ is set equal to SCHOOL. See why we call these quantities variables? We vary what they are set to each time, instead of leaving them set for all time.

Looks a bit more interesting now, doesn't it? You can use as much data as your computer has space for (and your typing fingers will really ache before you fill up the 16K TRS-80 with data). Your TRS-80 won't let you type more than a total of 255 characters

*A trademark of the Tandy Corporation

A year ago, when nobody had ever heard of me, I said these disks could turn a TRS-80* into a serious computer.

Now they tell me I'm "the standard of the industry."

I'm Irwin Taranto, and times have changed.

In the first twelve months, almost a thousand businesses put me to the test.

You can buy my TRS-80 systems all over the country — dozens of companies sell them. Some are my dealers, some aren't. And this creates a new set of problems.

You see, learning to use a computer — any computer — is like learning anything else. It takes some getting used to. If you sit down with a computer program and the manual and try to figure it out all by yourself, you'll probably just give up and feel you've been had.

You have to hang in there for a month, make a few phone calls, and have somebody who really understands the system help you work it out.

That's why I still answer the phone. And why, I guess, people say all those nice things.

The Model I systems

So far, I have six systems for the Model I, at \$99.95 each, plus \$20 each for the books where required. For the Cash Journal option on the General Ledger, add another \$50.

- Accounts Payable
- Accounts Receivable
- Invoicing
- General Ledger (Cash Journal optional)
- Payroll
- Inventory Control

And the Model II programs

Some brand new, highly-sophisticated programs for the TRS-80 Model II, at \$249.95 each, plus \$20 for the book where required.

- General Ledger/Cash Journal
- Accounts Payable/Purchase Order
- Accounts Receivable/Invoicing
- Payroll/Job Costing

For the Model I programs, you can tell us what you need in a letter or by phone. You get the disk and all the instructions you need. Any problems, just call me.

For the Model II programs, I ask you to fill out a questionnaire before I send you any materials. The systems have so much flexibility we tailor them to your needs.

That way, I make sure you get a system that works. If you have any doubts about that, I'll give you the names of some people in your area who've already been through the process.

Let them tell you whether I really deserve that fancy new reputation.

the electric pencil IITM

©1980 Michael Shroyer

for the TRS-80 Model II* Computer

The Electric Pencil is a Character Oriented Word Processing System. This means that text is entered as a continuous string of characters and is manipulated as such. This allows the user enormous freedom and ease in the movement and handling of text. Since lines are not delineated, any number of characters, words, lines or paragraphs may be inserted or deleted anywhere in the text. The entirety of the text shifts and opens up or closes as needed in full view of the user. Carriage returns as well as word hyphenation are not required since each line of text is formatted automatically.

As text is typed and the end of a screen line is reached, a partially completed word is shifted to the beginning of the following line. Whenever text is inserted or deleted, existing text is pushed down or pulled up in a wrap around fashion. Everything appears on the video display screen as it occurs thereby eliminating any guesswork. Text may be reviewed at will by variable speed or page-at-a-time scrolling both in the forward and reverse directions. By using the search or the search and replace function, any string of characters may be located and/or replaced with any other string of characters as desired. Specific sets of characters within encoded strings may also be located.

When text is printed, The Electric Pencil automatically inserts carriage returns where they are needed. Numerous combinations of Line Length, Page Length, Character Spacing, Line Spacing and Page Spacing allow for any form to be handled. Right justification gives right-hand margins that are even. Pages may be numbered as well as titled.

the electric pencil

—a Proven Word Processing System

The TRSDOS versions of The Electric Pencil II are our best ever! You can now type as fast as you like without losing any characters. New TRSDOS features include word left, word right, word delete, bottom of page numbering as well as extended cursor controls for greater user flexibility. BASIC files may also be written and simply edited without additional software.

Our CP/M versions are the same as we have been distributing for several years and allow the CP/M user to edit CP/M files with the addition of our CONVERT utility for an additional \$35.00. CONVERT is not required if only quick and easy word processing is required. A keyboard buffer permits fast typing without character loss.

	CP/M	TRSDOS
Serial Diablo, NEC, Gume	\$ 300.00	\$ 350.00
All other printers	\$ 275.00	\$ 325.00

The Electric Pencil I is still available for TRS-80 Model I users. Although not as sophisticated as Electric Pencil II, it is still an extremely easy to use and powerful word processing system. The software has been designed to be used with both Level I (16K system) and Level II models of the TRS-80. Two versions, one for use with cassette, and one for use with disk, are available on cassette. The TRS-80 disk version is easily transferred to disk and is fully interactive with the READ, WRITE, DIR, and KILL routines of TRSDOS.

BEST SELLING INFORMATION MANAGEMENT SYSTEM IN MICROS TODAY!!

SELECTOR III-C2

- Powerful
- Creates and Maintains Multi-key data bases
- Prints FORMATED, SORTED REPORTS with numerical summaries
- Source code supplied
- Prints MAILING LABELS — and more!
- Comes with APPLICATIONS PROGRAMS including

- Sales Activity
- Inventory
- Payables
- Receivables
- NAD
- Expense Register
- Checks Register
- Client/Patient Record
- Appointments
- Library

File management and report writing modules contain linkage to user subroutines to add virtually any special purpose application

STATE OF THE ART in information management systems!

NEW — "Ready-to-run" version for the TRS-80[®] Model I, only from Business Microproducts. Also available for Model II

Requires CP/M operating system or derivative and CBASIC2.

Offered on 5 1/4" or 8" all versions \$295.*
CBASIC2 with Selector Purchase \$75.*

TRS80S → CP/M

FILE TRAN

"BRIDGES THE GAP"

- Machine language COM FILE directly compatible with your CP/M system
- Automated Terminal Configuration
- Memory displayed in both HEX and ASCII
- Any disk Sector Selected and displayed in both HEX and ASCII
- Transfers both data and program files by file name byte by byte
- And more
- Newly created files scanned for potential errors between level II BASIC & MBASIC 5.0 or later
- CP/M files scanned for any selected string
- Searches any program for all occurrences of any string
- Generates a variable cross reference invaluable feature for any system level conversion and debugging
- Displays both CP/M & TRS80S directories

LNW RESEARCH introduces the LNW80, a high performance color computer, compatible with the TRS-80[™] Model I. The fully integrated LNW80 is a sophisticated and versatile microcomputer with the following powerful features.

COMPATIBILITY

Hardware and software compatible to the Radio Shack TRS-80[™] Model I computer, provides the widest software base of any microcomputer. Cassette interface, expansion bus.

DISPLAY

Quality upper and lower case display.

Two modes of color graphics, high resolution graphics, 384 x 192 in eight colors—higher density than the Apple II.* Low density color graphics of 128 x 192 are also available in eight colors.

High resolution—black and white graphics—of 384 x 192 mixed with text and TRS-80[™] standard graphics.

Reverse video, composite video RF output.

PERFORMANCE

The LNW80 utilizes the fast Z-80A microprocessor which executes at a speed of 4 MHz—over twice the speed of the TRS-80[™] Model I.

"We still don't have a really satisfactory program yet. For one thing, there's no end...."

on a line, so if your words (or numbers, of course, if you use number data) need another line...

There are rules about this, as you might expect. The last word in a line must not have a comma following it, and the next line must start with a line number which is greater than the line number of the previous line. After the line number, you must type in the word DATA, then the first data word for the line, a comma, the next data word and so on.

The computer always reads the data in order, starting with the lowest numbered line. There is no simple command which will fetch word number six, for example, although such a command would be very useful to have. Later we'll see how we can get around this limitation.

We still don't have a really satisfactory program yet. For one thing, there's no end to the program. It simply reads data until the last word has been read, and then you get an error message — OD (out of data). If you can't answer one of the questions, the program simply sticks, going back to line 80 from line 100 until you answer correctly or switch off in disgust.

Change Your Game

We need a few changes. First, we need to be able to stop the program when all six sets of words have been used. Secondly, we need to be able to limit the number of wrong answers so that the program doesn't stick. Finally, it would be useful to keep some sort of score.

You may not realize it, but you know one method by which to make these changes. The obvious method is to use counting variables which start at zero or unity and are increased by one (incremented) at each loop of the program.

Start by counting the number of times a set of questions and answers is read from the lines. Do we need to count this? Counting is one way of solving the problem, but there's another one: Put in a final pair of data items, and make the computer reject them. There's no animal called Z, and it doesn't hunt in Zs, so we can add Z,Z to the end of the line. We don't want to print Z, so we'll intercept this data, called a terminator, between reading in line 70 and printing in line 80:

```
75 IF Q$ = "Z" THEN END
110 DATA "LION","PRIDE",...,"GEESE","GAGGLE","Z","Z"
```

We have to put both Zs in the line, because the READ statement in line 70 always reads two strings. If there's only one, we'll get that OD error message again. This is a much more satisfactory way of terminating a read than by counting the number of sets

of reads, because it lets us add to the data easily, by inserting more data between the gaggle and the Z; if we had used a count, we should also have to change the count number.

We now have the problem of the program looping around line 80 through 100 and back when you can't answer. Let's allow three tries only, and if all are wrong, we print the correct answer and fetch the next pair of words.

How do we do that?

First of all, we must select a letter to represent the number of tries; T looks useful, as it will remind us of t for try. A letter which reminds you of what you are trying to do makes life a lot easier when you are designing and redesigning the program, or when someone else is trying to understand it. We want to allow one attempt whenever a pair of names is read, so we need to make T take the value of unity each time data is read.

*TRS-80 is a trade mark of Tandy Corp.

If you're serious
about the stock market,
you need
Tickertec™

Watch 48 to 400 of your favorite
stocks without a 15 minute delay.

Tickertec™ is a computer program that displays the NYSE or AMEX tickertape on your TRS-80™ Model I or both exchanges as an option on the Model II. You see every trade as it is reported by the exchange and track the last ten trades, tickertape reported volume, and high and low limits on the stocks you are watching. Tickertec program prices start at \$1,000.00 with many optional features available including hard copy and portfolio management systems. Programs may be purchased for cash (i.e., hard dollars) or payment can be arranged in the form of discounted brokerage commissions (i.e., Soft Dollar Software™). Exchange fees are extra. Call for FREE brochure TOLL-FREE at (800) 223-6642; in New York call (212) 687-0705; or circle the reader service number.

EDIT line 70 to:

70 READ Q6, A\$: T = 1

end T will be correctly set at each read step.

Now we want to add one to T each time you answer incorrectly. We can do that by altering line 100 (which is lengthening every time we alter this program), to read:

```
100 IF NS = Q6 THEN PRINT "WELL DONE":  
    GOTO 70 : ELSE PRINT  
    "WRONG, I'M AFRAID - TRY AGAIN":  
    T = T + 1 : GOTO 80
```

After our third attempt, T will have the value four. We now need to arrange for this to cause the program to break out of its loop.

If T is less than four, line 80 should print Q6 and ask for an input reply. If T is equal to four, we want to print the correct answer and start with another pair of words. It looks like a convincing case for an IF... THEN statement. Suppose we make line 80 read:

```
80 PRINT Q6 : IF T = 4 THEN PRINT  
    "ANSWER IS" : A$: PRINT : GOTO 70
```

If you've had three attempts, the answer is printed and a new animal question is asked. In line 70 T is again set to 1, so the next time the program goes to line 80 the new piece of program is ignored again. We've printed the words and the variable A\$ in the new section of line 80 using a semi-colon to keep the video display running on the same line. (We could have used T = 1 in line 70 and IF T = 3 in line 80.)

The next item on the list is a way of keeping score. To be fair, we need to keep a tally of the number of total attempts and the number of successful attempts. Each time we've been successful, we've printed WELL DONE, so we could make a count of the successful attempts there. Each time we answer, we input something on line 80, so the total number of attempts could be counted there.

Let's use the variable A for the number of attempts. We have to start at zero, so A must be set to zero early in the program. Line 10 is fairly empty, and we can add, after a colon, A = 0. To count the attempts, line 90 needs another addition: A = A + 1 so that A is increased by one each time you answer.

If we use S to count successes, we can set S = 0 in line 10, and increment it just after the statement PRINT "WELL DONE" in line 100:

```
100 IF NS = Q6 THEN PRINT "WELL DONE":  
    S = S + 1 : GOTO 70 : ELSE  
    PRINT "WRONG, I'M AFRAID - TRY AGAIN":  
    T = T + 1 : GOTO 80
```

Finally, having counted attempts and

successes, we better make some use of them. When the last pair of items (the terminators) has been read, we can print the scores instead of just finishing the program. This is done by adding line 75:

75 IF Q6 = "Z" then 120

end in line 120, printing the score.

In case you're getting a bit lost with all these changes, Listing 4 shows what the program now looks like. The program which started as a very simple game is now more advanced, and does its own scoring as well.

Add Excitement with FOR-NEXT

The game will be much improved if we can arrange the program so that the computer can pick any animal at random and surprise you. We can't tackle that until we learn two other instructions.

The first is a really powerful one called the FOR-NEXT loop. Its purpose is to allow you to count the number of times an operation is carried out. For example, if we type in the instructions:

```
200 FOR N = 1 TO 6  
210 READ S$  
220 NEXT
```

a loop will be set up to read six items from a line somewhere else in the program. The first time the computer comes to line 200, it sets N at 1 and then in line 210 reads the first item, assigning it to S\$.

There being no instructions about what to do with the item in this example, the computer goes to the next line—NEXT. NEXT means go back to the FOR instruction, and make N one step greater. The size of the step, unless you instruct it otherwise, is 1. The next time round N is set to 2, and in line 210, the second item is read.

Once again we go to line 220, and the NEXT instruction compares the value of N (now two) with the limit we set (which was six) and returns the program to line 200. This loop repeats until the NEXT instruction makes N = 7. This stops any return to line 200, so that the program goes on to the next line.

The example we've used is a fairly simple one, with very few instructions between the FOR and the NEXT. We could, in fact, write such a short piece of program on one line:

```
200 FOR N = 1 TO 6 : READ S$ : NEXT
```

end we don't have to worry about having to set up a comparison like:

```
210 IF N <= 6 THEN 200 ELSE 220
```

The word powerful, when it's applied to

Osborne & Associates ACCOUNTING SYSTEMS

For two years we have looked for good business accounting programs. After reviewing many over-priced or non-functioning packages, we have finally found some excellent software. And it is available at a reasonable price - \$25.00 per package.

These programs are the Osborne & Associates systems which are copyrighted by Taranto & Associates. They are excellent programs which have been used for several years. Originally written for other computer systems, these programs are now available for the 48k Model I TRS-80 with two disk drives.

These programs are not games. They are meant to adapt to your accounting system. You should not expect us or this software to be your accountant. But, if properly used, you will save hours of valuable business time.

All Osborne & Associates programs are fully documented by their three extensive books - "General Ledger," "Accounts Payable & Accounts Receivable," and "Payroll with Cost Accounting." (These TRS-80 programs do not include the cost accounting system. The General Ledger does contain a Cash Journal.) These books are available for \$20 each. Please include \$3.00 per book for first class shipping (otherwise sent U.P.S.).

Act today!

General Ledger	\$25.00
Accounts Receivable	\$25.00
Accounts Payable	\$25.00
Payroll	\$25.00
Any book	\$20.00

SUPER NOVA

by Bill Hague from Big Five

Asteroids surround your ship. Shoot the asteroids and the alien ships. Written in machine language, this game is GREAT! There are five different types of alien ships including the very deadly Flagship. You shoot from your ship, rotate it, use your thrust key to move, and in emergencies you go into hyperspace. Level 1 or 2 - \$14.95*

GALAXY INVASION

by Bill Hague from Big Five

"Galaxian" is the rage at the arcades. Now GALAXY INVASION is the rage on the TRS-80. The aliens move about the top of the screen and will smoothly swoop down on you. But watch out for the Flagship Alerts! Level 1 or 2 - \$14.95 (P.S. This ad almost did not get finished due to Galaxy Invasion addiction.)

TRS-80 Programs

16k Level II

FLIGHT SIMULATION

by Bruce Artwick from Sublogic

The wait is over! If 3-D graphics seem impossible on the low resolution TRS-80, you haven't seen this brilliant program. During FLIGHT SIMULATION, you instantly select instrument flight, radar, or a breathtaking pilot's-eye view. But be sure to strap yourself in -- you're liable to get dizzy!

Once you put in some air time learning to fly your TRS-80, head for enemy territory and try to bomb the fuel depot and airstrip while fighting off five enemy warplanes. Good luck!

Level I or II protected cassette \$25.00

OTHELLO

from Instant

We have long looked for a good Othello playing program. This is it! The program has seven levels of play and it will let you see its thinking. Written in machine language, you decide where to move using the arrow keys. \$9.95

TUNNEL OF FAHAD

by K. Pfeiffer from Adventure

Patterned after the popular arcade game "Crash", this is an action game with sound. You attempt to recover the silver and tanner leaves while avoiding the Mummy. \$9.95

QUAD

by Charles Asper from Acorn

If you are looking for a logical and challenging game you should try your hand at QUAD. The game is like 3D tic-tac-toe with a time clock and four levels of play for one or two players. Vivid graphics and six-way cube rotation so you can see the play from any angle.

Protected tape \$14.95
Protected disk \$20.95

BOSS

by V. Hester from Soft Sector

This utility is the perfect tool for creating and debugging BASIC programs. It allows single stepping through a BASIC program, setting up to five break points in the program, and tracing of program logic using only a small portion of the screen. You can also review selected variables during program execution and return to your program with the display restored. If you like, you can store one or more programs in high memory for later retrieval.

Known to work with Level 2, TRSDOS, NEWDOS 2.1, NEWDOS/80, and VTOS. \$29.95

THE BOOK

ACCESSING THE TRS-80 ROM

from Insiders Software Consultants

For the machine language expert or beginner! This first of three volumes gives you access to over fifty arithmetic, mathematical, and data conversion routines in the TRS-80 ROM. Includes sample programs, a disassembler program, a commented listing of these ROM routines, and a memory map of over 500 addresses. 134 pages. \$14.95

DISKMOD

by Roy Soltoff from Miossys

This machine language program modifies your copy of the Radio Shack Editor/Assembler for use with your minidisk and any disk operating system. You can save and load both text source and assembled object files. Unlike the NEWDOS version you can read the directory and the allocation of granules while in the EDTASM. You can also kill files. It is a complete disk modification for one or more drives.

Other capabilities are also added which are not found on NEWDOS. The block move command relocates a section of text to any other area. The global change command permits, for example, changing a label throughout the text. The pagination feature provides hardcopy on 8 1/2 by 11 pages on either single sheets or continuous paper. In addition, high memory can be reserved, like in BASIC, for machine language routines like printer drivers. You can also display the amount of memory remaining.

The [CLEAR] key is functional, the symbol table is sorted alphanumerically and output 5-across, the scroll up/down allows 15 lines on the screen, and the 'DEFM' assembly is improved. Lower case input is now permitted and you can branch to any address. Plus, it also corrects the errors in the Radio Shack tape version.

Save your time and make full use of your disk system by upgrading your Editor Assembler today. \$19.95

an instruction means it does a lot of program work without needing much typing. The amount of work it does can be judged from the time it takes. As an example, and so that you can see the FOR-NEXT loop doing something, try the program in Listing 5. Use a digital watch to measure the time between pressing ENTER on this one liner and getting the READY signal back, and watch the line printing out. FOR-NEXT loops are often used deliberately in programs to create a time delay, such as to give you a definite time to answer a question before moving on to the next one.

BASIC Info

There's a routine built into the BASIC language which picks numbers randomly for any number limits you like to use. The command is RND, and what makes it so useful (not just for games, incidentally) is that it can be followed by a whole number (an integer) in brackets. The result will be an integer picked at random which lies between one and the number you used in the brackets. For example, RND(6) should cause the computer to come up with a random whole number between one and six.

We have a data list of six items and can produce a random number between one and six. It would be useful if that random number could be used to select the corresponding item of data. For example, if

RND(6) came up two, the second item from the list would then be selected, and so on.

There's no such instruction in BASIC so we have to look for ways around this problem. Suppose the random number came up three. Could we perhaps read the data list three times, and use the last item only? We could indeed, and that's what the first sample FOR-NEXT program did.

Take a look now at Listing 6. There's a new line in the old program, line 65. At the start of line 65, T, the number of times you've tried, is set at 1. We had to shift it because our new program is going to read data in several times before it actually prints an animal name, and we don't need T set more than once each time. The next instruction in line 65 is Y = RND(6), which picks a number between one and six and allocates it to the variable Y. We can now use a FOR-NEXT loop, with the counting variable N counting from one to Y. You don't know yet what that number Y is, as it's going to be set and used by the computer itself.

The Anticipation Mounts

What happens on each loop? At a value of N set at one, the program moves to line 70, and reads the first two items (LION, PRIDE) on the list. There are no other instructions, so the NEXT command causes N to advance to two, and the next pair of

FROM **PROGRAMMA** HI-RESOLUTION GRAPHICS FOR THE TRS-80®

LOWER CASE

The 80-GRAFIX board includes two sets of lower case characters at no additional cost.

INVERSE VIDEO

The 80-GRAFIX board allows you to do inverse video to high-light your screen displays.

DEMONSTRATION PROGRAMS

The 80-GRAFIX board is supplied with a Character Generator software and several demonstration programs.

FINALLY, AT LAST...

HI-RESOLUTION GRAPHICS is available for your TRS-80 computer system. The 80-GRAFIX board from PROGRAMMA International, Inc. gives your TRS-80 high resolution capability that is greater than the Commodore CBM/PET or even the revered APPLE II.

80-GRAFIX gives the TRS-80 an effective screen of 384X192 pixels, versus the normal 127X192 for the TRS-80, 80X50 for the CBM/PET, or the 280X192 of an APPLE II. As an added feature, 80-GRAFIX offers you lower case characters at no additional cost. Of course, you can also create your own set of up to 64 original characters using the supplied Character Generator software.

The 80-GRAFIX board is simple to install (note that this voids your Radio Shack warranty), and programming is done through BASIC. 80-GRAFIX opens up a whole new realm of software development and excitement never dreamed of for the TRS-80!

CHARACTER GENERATOR

The supplied character generator software allows you to create your own character set of up to 64 original characters.

REAL-TIME GRAPHIC GAMES

With the 80-GRAFIX board you can write exciting real-time games using BASIC.

EASY INSTALLATION

The 80-GRAFIX board is simple to install and fits inside the TRS-80 case.

GRAPHICS GALORE

The 80-GRAFIX board and the supplied Character Generator allow you to become an artist.

ELECTRONIC DESIGN

The 80-GRAFIX board has unlimited application in Electronic design and Education.

80-GRAFIX HI-RESOLUTION

Finally, the only means to protect your computer investment is to order an 80-GRAFIX board TODAY!

EXCITEMENT & FUN

Open up a new realm of software development with the 80-GRAFIX board.

Available exclusively through PROGRAMMA at the cost of \$149.95

WITH TWO VERSATILE PROGRAMS
DEVELOPED BY DR. S.W. TURNER

CURVLOT Rapidly plots nearly any user defined function in any or all quadrants. Simply type in desired function using standard algebraic format. User controls range of x and y independently and program labels both axes. Program optionally displays values of x & y. Designed to graphically examine limits, intercepts, discontinuities, and inflection points. Excellent for instruction. \$16.95

CURVFIT Determines coefficients of all polynomials up to 14th degree through a large no. of data points (160 pts. for 16k mach.) using method of least squares. Data points may be input in any order. Program computes correlation coefficients for each degree of fit and tabulates all correlation coefficients for easy selection of best fit. Also interpolates to predict any values of X & Y based on available data points. Easy correction of entry errors. \$16.95

items is read. Reading the next pair of items in this way automatically causes the previous values to be wiped out, just as recording a new item on a music cassette wipes out the one on it before. The value of the variable N will be increased by one on each run around this loop, until it equals Y, the random number. Suppose Y happens to be four. Then the fourth set of words is read, and the loop stops with O\$ and A\$ storing the fourth set of words, SHEEP and FLOCK.

The FOR-NEXT loop has stopped and the program moves to line 80, carrying out one very important instruction on the way. RESTORE causes the data selector to go back to the start of the data. Without RESTORE, the next time we look for a word, the data would be counted from where we left off first time, which doesn't leave much room for choice, since only a herd of cows and a gaggle of geese follow the flock of sheep. RESTORE sets everything back so that the next random number starts the search from the beginning of the data again.

For a simple game like this, let's view the score after each set of five answers.

We need to count a set of five items printed, and then show the score. We will set up another variable, (J) to act as a counter, and increment each time a question is printed. We want a way of telling when J is 5, 10, 15 or any other multiple of 5. We could have lines like:

```
200 IF J = 5 THEN-----
210 IF J = 10 THEN-----
220 IF J = 15 THEN-----
```

but that's a waste of time and memory. A much easier trick is to make use of yet another feature of that big BASIC in the TRS-80, the INT command. INT means rounding off a number by removing the fractional part. INT(6.25) is 6, INT(2.14) is 2 and so on. The way we're going to use INT is in a decision step:

```
IF INT J/5 = J/5 THEN-----
```

"Without RESTORE, the next time we look for a word the data would be counted from where we left off the first time, which doesn't leave much room for choice, since only a herd of cows and a gaggle of geese follow the flock of sheep."

We've now arrived at line 80, and the question word is printed as before. The rest of the program is also unchanged, so that if you answer correctly or have three unsuccessful tries, the program returns... or does it? You need extra eyes in this business. If we want the next word to come up, we need a new random number, else the program will go back to its old way of taking the next pair of data words. Instead of GOTO 70 in line 80 and 100, we want GOTO 65, and that should set things right.

The game's getting more interesting now, and it would be useful to have more items on the list, because with only six sets of items it's not much of a game. Our changes have made the Z,Z terminator unnecessary. Because we're picking at random from six, there's no chances that Z will ever be picked, so we can remove these letters from line 110. We can also remove line 75.

How do we go about ending the game and reading the score? It would be useful to see the score any time we want and opt to continue or end.

The easiest way to understand how this works is to imagine taking values from one upwards. If J is 1, then J/5 is 0.2, and INT(J/5) is zero. J/5 certainly isn't equal to INT(J/5). For J = 2,3,4 we get the same effect; the INT value is zero, but for J = 5, when 5/5 = 1, and INT(5/5) also equals 1, the test succeeds.

At J = 6, J/5 = 1.2, and INT(J/5) = 1, and the two are unequal again until J = 10, when both J/5 and INT(J/5) are equal to 2. This test therefore allows us to detect each set of five steps of J.

If J/5 = INT(J/5) we want a score. We don't want the score to come up too quickly, so we'll introduce a time delay between each test, which will also delay the appearance of the score. To do this we can use:

```
FOR Z = 1 TO 500: NEXT
```

Z doesn't mean anything to the program, it's just a variable which we're using for a time delay.

How do we use the test IF J/5 = INT(J/5)?

"It's at this stage that you can make a program look and run more professionally. . . ."

If the test fails, the ELSE at the end of the line directs the program to find another item. This will happen on the first four runs. When the test succeeds, and $J/5 = \text{INT}(J/5)$, we've reached the fifth (or 10th, 15th, 20th. . . .) item, and the screen is cleared and the score printed.

The next line is the new way of deciding whether to continue the game or stop. The question "DO YOU WANT TO CONTINUE" is asked, and instructions are given for answering. An answer of this type (Y or N) has to be followed by hitting ENTER; later on we'll look at methods of answering questions like this without using the ENTER key. I'm a card-carrying member of the Help Stamp Out Needless Key Pushing society, myself.

This looks like a good time to sit back and take a hard look at our program, which is possible only if you have a copy on paper. Short programs of 16 lines or less can be viewed on the video screen, but this one will not quite fit into 16 lines. For programs longer than this, the only effective way to check it is to print it on paper or to copy the listing from the video screen.

Shape-Up and Look Professional

A long hard look at our program as it is now shows that it needs renumbering. The odd numbered lines we added have inserted useful features into the program, but they make it look rather untidy. If we had a really long program here, the simplest way of renumbering would be to use a renumbering program. As we're remodeling the program with this new random selection feature, we might as well write out the program again, and renumber as we go. The result is shown in Listing 7.

It's at this stage that you can make a program look and run more professionally than most home-brewed efforts. One pointer is neat printing, with good tabulation and even lines, preferably right justified. Right justified means that the ends of the lines on the right of the screen are lined up, and it has to be done by careful attention to the spaces between the words in the line. A professional programmer may spend as much time on tidying up the printing in a program as on the rest of the program.

The next item on the list is error traps. Professional programmers write programs which other people are going to use, and a good program should be user friendly and crash proof. User friendly means that when the user has to make some sort of choice, the questions should be put politely, and easy to answer.

For example, it's a whole lot friendlier to be asked to type YES or NO, than 1 or 2. Crash proofing is even more important, and

means that every input from the user has to be tested. For example, if a YES or NO answer is called for, what happens if the user types YO or NES? A homebrew program might terminate, or worse still, it might take the answer as being YES or NO with no indication to the user. A much better way is to respond to a wrong answer with a statement such as:

```
"I'M SORRY - I DON'T RECOGNIZE THAT ANSWER";
NS:"PLEASE TYPE YES OR NO"
```

In this line, NS would be the word which the user had typed, and the line would be followed by a GOTO instruction so that the choice was presented again.

Each request should be accompanied by a clear list of what the choices are, the user should be reminded of the choice, once made, and an unacceptable answer should be explained, with a return to the request. Making sure that this is all done is not so simple; it can take up a lot of time and needs a lot of careful thought. It also needs memory space.

It pays off handsomely in the end, however, because your program will always be a delight to run, easy for you or your friends to use, and a very attractive item if you want to sell it.

Speed It Up

A few final details will help the program to run faster. We'll spend more time on the

different types of number variables in Part four of this series, but it's not giving secrets away to tell you that the TRS-80 can store numbers in three different forms. If you don't specify what you want, all number variables are stored as single precision numbers, as if they consisted of a number with several places of decimals. This takes up a lot more memory space than a simple whole number (an integer). If we can define all number variables as integers, our programs will run faster and use less memory. The program in Listing 7 uses a lot of number variables which could be defined as integers: A,S,T,Y,N,Z. By redefining them, we can clear enough string space for more data words. Alter line 10 to read:

```
10 CLEAR 100:DEFINT A,S,T,Y,N,Z:J:A=0:S=0:J=0
```

Notice that A and AS are entirely different variables: one is a number variable which we've now defined as an integer, the other is a string variable which is an answer to a question.

How about taking the plunge for yourself and designing your own question and answer game? Remember that you will have to insert a larger number after CLEAR in line 10 if you use a lot of word pairs (the number should be equal to the number of characters, plus a bit in reserve). You will also have to change the title and instructions to fit your own ideas.

Next month—another small step for the TRS-80, a giant step for programmers. ■

TRS-80* OWNERS:

- Let the computer write your "Basic" program for you!
- Draw pictures, animated figures, data forms!
- Create a library of display forms!
- Produce "Commercial" gradesoftware!

The Magic Cursor is a Revolutionary Family of Products which provides a dramatic new method of reproducing drawings and displays that you create on your screen. It makes both simple displays and complex interactive data input forms. It stores a "BASIC PROGRAM" on disk (or tape) ready for you to execute alone or as a subroutine. It produces screens in both standard or wide screen.

It is available for any level 2, 16K or larger system with tape or disk. An optional version is now available which creates an assembly language program.

Be sure to pick out the system that fits your present needs and order it today. You may upgrade your original copy by paying the difference and a moderate service charge.

MAGIC CURSOR PROGRAMS

THE MAGIC CURSOR allows you to easily create screens (including graphics) on your video. A powerful command then generates the BASIC instructions to recreate the screen. For the first time, a program for automatic generation of video display forms. (16K Tape or Disk) **\$24.95**

THE MAGIC CURSOR I additionally makes sophisticated Data Entry and Display easy. With Magic Cursor I you define the Data Entry or Display fields directly on your screen. The definition commands generate the BASIC instructions to implement the Data Entry and Display. The Magic Cursor I has commands which move, center, and duplicate blocks of graphical or alpha/numeric displays. You can even justify text. (16K Tape Only) **\$79.95**

THE MAGIC CURSOR II adds the power to write animated games easily in BASIC. The Magic Cursor II allows you to reload previous screens either from memory or from Disk. You can then modify them and store either the modified screen or only the changes. (32K Disk Only) **\$99.95**

THE MAGIC CURSOR III will be available soon for the new Model II Computer (32K One or more Disk) **\$149.95**

THE MAGIC CURSOR IV provides the features of Magic Cursor II but stores an assembly language program (32K Disk Only) **\$99.95**

NEW RELEASES FROM CCC!!!

A Monitor/Trace program with versions for both Model I and Model II.

Trace-80™ ★

TRACE-80 lets you observe the inner working of a machine language program. It allows you to run a machine language program in slow motion and watch the screen. You can stop execution at any time and examine the current instruction mnemonic and all register contents. You can execute your program and watch each instruction mnemonic, and register contents list to the screen in place of normal screen display.

If you have a printer, **TRACE-80** allows you to execute your program in slow motion and watch the screen while your printer simultaneously prints the machine code being executed, the memory location and the instruction mnemonic along with the current register contents.

You can execute a machine language program in slow motion, freeze the action, examine and/or change memory, examine and/or change register contents and then continue the slow motion. You can speed up past common routines and slow down to examine other routines in detail or operate in single step mode.

TRACE-80 allows you to trace ROM as well as RAM because instructions are emulated in a special execution buffer.

FEATURES:

- ★ For both beginner and advanced programmer.
- ★ More than 20 commands.
- ★ Trace-80 is written in machine language.
- ★ Traces both ROM and RAM.
- ★ Level II or Mod I Disk operation.
- ★ Model II Disk version available.
- ★ Optionally prints only "Transfer and Control" instructions.
- ★ Full speed, slow speed or freeze execution modes.
- ★ Memory can be displayed/modified.
- ★ Register contents can be displayed/modified.
- ★ Hex, ASCII and mnemonic display modes.
- ★ Abbreviated or full printer format.
- ★ Serial printer output if desired.
- ★ Option of normal screen display, memory display, trace display or clear screen.
- ★ Learn assembly language programming as well as machine coding by watching actual code execution and see assembly language mnemonic.

PARTIAL LIST OF COMMANDS: Load disk file, Trace, Slow Motion Execution, Full Speed Execution, Freeze Action, Single Instruction Execution, Examine and/or Display memory, Examine and/or Display Register Contents, Enable/Disable Screen, Enable/Disable Printer, ASCII or Hex Display, Full Screen Memory Display, Line Printer Commands, etc.

TRACE-80/MOD-I (for Level II or DOS operation) ... **\$29.95**

Supplied on tape with 3 versions (16K, 32K or 48K) and instructions.

TRACE-80/MOD-II **\$49.95**

The Supply Room ★

A sophisticated program that is easy to operate. This unique system helps you manage your retail or wholesale inventory of up to 1000 line items. Cost may be fractions of a cent, item quantities may be decimal values. Automatic cost averaging of updated items and suggested sales prices based on gross profit. Transaction reports produced during posting functions. Printed reports include:

- | | |
|--------------------------------|------------------------|
| 1. Transaction Listings. | 4. Items on Order. |
| 2. Complete Inventory Listing. | 5. Items Out of Stock. |
| 3. Listings by Prefix. | 6. Suggested P.O.'s. |
- Requires Mod 1, 32K, Disk & Printer **\$250.00**
Or Mod 2, 64K, 1 Disk & Printer **\$250.00**

The Filing Cabinet ★

Take that collection of Job Orders, Personal Records, Reports, Etc. and get them organized. You define up to 14 data input fields specifying field type - alpha/numeric or \$\$\$, field length and field separators - such as slashes, etc. During data input, the cursor provides for character input and skips over the field separators.

But that's only half the story. Output reports are automatic formatted and program automatically requests column headings.

This means you can customize your own data base manager, complete with rapid data input and selective output reports. Comes complete with documentation.

Requires Mod 1, 32K, Disk & Printer **\$100.00**
Or Mod 2, 64K, 1 Disk & Printer **\$150.00**

A really good game.

Computer Monopoly

Barry L. Adams
109 Valley Place
Greenville, NC 27834

Ever wonder what it would be like to play a game of Monopoly against your TRS-80? Well, here's your chance. This 16K, Level II program emulates a player in the classic Parker Brothers board game.

With the exception of a screen board no graphics are employed, as the anti-complement of 16K memory is required by the program. The game consists of two separate programs, an instruction program and the main program. Though the instructions are easily understood, they don't include the rules to Monopoly.

Although the main program is called by the instruction program, it can be loaded independently. However, because of strict memory requirements when loaded independently, there is no initial opening title.

During the game, the TRS-80 participates as a player—buying, selling and trading real estate—out to make the best deal possible and win. It buys its own real estate, improves the property and charges more rent. It sells property and makes business deals like any other player would. It can also go bankrupt. When in a

scrape, the computer will automatically mortgage some assets and settle the debt, only to rebuy the property when financially able.

The computer can roll the dice for any player. It also maintains a set of books that can be examined by any of the other players. Players make their business proposals directly to the computer. The game can be played with up to seven human players.

Because of memory requirements, the

program has been written without spaces between the statements. Though this makes the listing somewhat difficult to read, the program is generally divided into blocks. Each block contains a single major routine or a group of related smaller routines. Table 1 should be helpful.

Generally speaking, I think you will find that the computer is a quite personable player. However, like any human player it can become rather fickle—especially when winning. ■

Lines 1-85:	a. initialize variable b. players' command display c. die rolls d. computer die roll analysis e. delay loop f. computer's books
Lines 100-199:	evaluation routine for computer-generated proposals (This routine calls elements of block 700.)
Lines 200-299:	a. computer mortgages real estate and improvements b. settles debts c. rebuys mortgaged property and improvements
Lines 400-499:	construction routine to erect houses and hotels
Lines 500-599:	player propositions
Lines 600-699:	player proposition evaluation (This routine calls elements of block 100.)
Lines 700-799:	a. the basic game utility. The routine tracks the disposition of all property and improvements. b. computer cash offers for real estate
Lines 800-899:	a. computer in jail b. income tax routine
Lines 900-999:	a. Chance and Community Chest routines b. account deductions c. account credits d. get out of jail free

Table 1.

SOFTWARE FOR THE TRS-80*

INTELLIGENT TERMINAL SYSTEM ST-80-M BY LANCE MILLER: Enables a TRS-80* to act as a dial-up terminal on any standard time sharing network. Provides a TRS-80* with control key ESC Key, Repeat Key, Rub Out Key, Break Key, full upper and lower case support, selectable printer output and program selectable transmission rates. **\$139**

CCA-DATA MANAGEMENT SYSTEM: Automate your information processing tasks. You can create a file of customer information; quickly and easily add, delete or update records; search a file; keep a file in order of the value in any field; and print records and labels in any desired sequence or from just a part of a file. Requires 32K TRS-80 and one drive. **\$72.00**

S & M SYSTEMS INSEQ-80™: Indexed Sequential Access Method (ISAM) for the TRS-80 Model I. A must for anyone writing business programs. Eliminates wasted disk space from direct record processing. Split second access to any record. Access data records instantly via alpha/numeric "key" eg. Part No., zip code or sequentially in ascending key sequence. Add/modify records in any order. Access up to three files per program—Files

may be spread over multiple disks. Machine language processing from your basic program. Utility program to convert direct files to INSEQ-80 format. **\$49.00**

FULLY INTERACTIVE ACCOUNTING PACKAGE: ISAM (INSEQ 80) based. Includes General Ledger, Accounts Payable, Accounts Receivable and Payroll System runs "stand alone" or "co-ordinated G/L" as users option. Based on Osborne accounting method. Requires 32K TRS-80, 2 or 3 drives. N/A CA

General Ledger **\$89**
Accounts Receivable **\$89**
Accounts Payable **\$89**
Payroll **\$89**
Osborne books. Req'd as additional documentation **\$20 ea**

INVENTORY Requires 32K TRS-80 1 drive **\$125**
INBORT-80: Callable form BASIC via USR Sorts "Random" Disk Files "Disk" to "Disk" sort times ~ 350 records in 35 secs. 1000 records in 6 minutes. 3500 records in 12 minutes. Machine language processing. Up to 35 sort keys ascending/descending. Utility to build BASIC program. Runs under NEWDOS. **\$49.95**

CP/M® BASED SOFTWARE for Zenith, Altos, Radio Shack, Apple

Z-88 SOFTCARD FOR APPLE: Your key to future software expansion. Get the best of both worlds. Apple's 8052 and CP/M 2.80. Plug in the card and get a Z80. Supports Apple language card and all Apple peripherals. Comes with set of three manuals. **\$39**

CCI-TELNET VERSION 8: A communication Package which enables microcomputer users to communicate both with Large Mainframes and other microcomputers. Extensive commands make it useful in many applications where communication between computers is necessary. Powerful terminal mode enabling user to save all data from a session on disk. Completely CP/M compatible. Multiple communication

protocols supported. Able to transfer files in both directions without protocol where the other machine does not support any protocol. Extensive ON-SCREEN help. Source code provided. **\$149**

MICROPRO-WORD STAR: Menu driven visual word processing system for use with standard terminals. Text formatting performed on screen. Facilities for text pagination, page number, justify, delete and underline. User can print out document while simultaneously adding a second Edit facilities include global search and replace. Read/Write to other text files, block move, etc. Requires CRT terminal with addressable cursor positioning. **\$399**

An 80 application for darkroom denizens who lack photographic memories.

The Fixer

Peter Ashley
10 Clinton St.
Portland, ME 04103

Being a photography teacher as well as a computerist, it seemed natural that I combine the two interests. The first and most obvious photographic use for the personal computer is an electronic collecting place for photographic data.

Photographers are deluged with masses of technical information that is supposed to assist them in making better photographs: camera types, film speeds, filters, exposure variables, chemicals, time and temperature calculations, paper grades, and long lists of photographic accessories.

Why not put it all in one easily accessible place?

A second promising blend of photography and the microcomputer is its educational application. The personal computer can emulate several photographic processes such as f/stop openings and shutter speed action. It can quickly calculate exposure setting changes, proportions for chemical mixing, and time-temperature relationships. And it can actually do all your timing for you, so that a budding photographer can concentrate on making good photographs.

In the future, easy to use add-ons will be available to the photographer. With the proper circuitry you will be able to interface devices that measure light, moisture and temperature. Already the computer can be used to time the enlarger. It can set and trip critical shutter speeds. It can coordinate multiple lighting set-ups and multiple camera arrangements.

Photographic Notebook

The application I chose here is film development, because it allows the TRS-80 to show off several of its advantages. The program that follows is designed to be part of a series of photographic programs that can be combined into a photographic notebook.

When designing the program, I wanted it to be easy enough for the beginner to use, yet be valuable to a more experienced photographer. It had to run smoothly so that, while using it, you assume the role of a photographer—not a computer programmer. Finally, I wanted a flashy program to satisfy my creative instincts.

Film development uses a highly interactive style to lead you through nine steps toward printing of a variety of black-and-white film types. You simply select the film and developer you are using, and let the computer handle all the timing cycles.

The program assumes that you are using a temperature of 68 degrees Fahrenheit. However, you can alter the development time in case you are using a different temperature or you are compensating for under or over exposure.

All input is followed by a reassuring beep and the completion of each timing cycle is signaled with an audio alarm. To make use of these sound features, connect the cable coming from the keyboard (this normally plugs into the aux input of the cassette recorder) into an amplifier. You can leave both the recorder and the amplifier connected by using a Y-adaptor.

The sound routine, which is Dennis Kitz's Babybeep (April, 80 *Microcomputing*) is found in lines 200 through 400.

All single stroke input uses the INKEY\$ feature of Level II. Multiple key input is used only at noncritical times and, of course, requires the use of the enter key.

In lines 500-599 the computer allows you the option of fine-tuning the timer. This routine is for the benefit of non-programmers. Normally you will be able to answer N, and let the timer work in its preset condition. The loop value is set as 30090 in line 30.

However, if your TRS-80 clock is found to operate at a slightly different rate, or if you have modified any part of the program that affects the timing loop, you have two options: Firstly, assign a different value to TZ in line 30. Secondly, simply answer Y when running the fine tune routine and follow its instructions.

Assume Familiarity

The program assumes some familiarity with developing black and white film. However, it is careful to guide beginners systematically.

You select your film and developer from a model defined by the program in lines 600

Above: Title employs a graphic device while data is read.

Top: Menu of Developers. Bottom: Mixing instructions for Developer. Left: Rinsing time is shown using the clock routine.

Left: Each step pauses until you want the timer to begin. Above: Each step is user-interactive.

The MICROCONDUCTOR™

the ultimate
database manager
for your TRS-80® and Apple®

Compose Any Software Program
By simply answering the questions,
YOU Describe the file layouts
YOU Specify the print formats
YOU Design the update functions.
The CONDUCTOR DOES THE WORK!!!

The MICROCONDUCTOR™ directs your computer to compose, organize and summarize all information you need to solve your software and business problems.

With The MICROCONDUCTOR™, your computer will be able to compose any record-keeping software you need. In the office, The MICROCONDUCTOR™ can help with anything from accounts receivable to property management. You'll find that The MICROCONDUCTOR™ is ideal for the shop too. Let it take care of your inventory records, sales analysis, price lists, and more.

The MICROCONDUCTOR™ is not just a file manager but a true Data Base Management System suitable for both the novice and professional users.

Some of the modules of this masterpiece are:

- DATA FILE—One step file creation. Just set it, and forget it.
- MAINT.— Manipulate your data files with ease; add, delete, modify, scan, relocate, and more.
- SORT— Sort any number of fields, in any sequence, ascending or descending order.
- UPDATE— Single or dual file report and update utility.

Introductory Prices

TRS-80® Model I.....	\$249
Apple®	\$299
TRS-80® Model II	\$399

The MICROCONDUCTOR™ is power at your fingertips! Power to set up, maintain, sort, report, and update data files at whim. Just imagine: with the MICROCONDUCTOR™, you can establish a custom mailing list system in 30 minutes, accounts receivable in 2 hours, a complete business system in only a few working days. Never before has your computer been given such power!

DATA FILES—No limit on the number of records a file can have.

FIELDS—Any type (string, interger, single, double). Eight entry modes (including defaults, counting, and suppress).

REPORTS—Four ways to generate reports. Total numeric column(s). Print on any paper in any format (statements, labels, etc.).

SORT—Any field(s) in any combination (i.e. multiple-key sort). Any size file, numeric or ASCII. Ascending or descending.

MAINT.—Command anticipation. Record duplication. Direct access and sequential search.

UPDATING/

MERGING—Add, subtract, multiply, divide fields. Combine results from previous calculations. Test for any condition and take action.

*Registered trade mark of Apple & Radio Shack.

NEWDOS 80

A new enhanced NEWDOS for the TRS-80.

The most powerful Disk Operating System for the TRS-80, designed for the sophisticated user and professional programmer who demands the ultimate.

NEWDOS/80 is the planned upgrade from NEWDOS 2.1. Some of the features are:

- New BASIC commands for files with variable record lengths up to 4095
- Mix or match drives. Use 35, 40 or 80 track 5" disk drives or 8" disk drives, or combo
- Security boot-up for BASIC or machine code application programs
- New editing commands
- Enhanced RENUMBER that allows relocation
- Command chaining
- Device handling for routing to display and printer simultaneously
- OFG function; striking of O, F and G keys allows user to enter a mini-DOS without disturbing program.
- Compatible with NEWDOS & TRSDOS
- Machine language Superzap/80 2.1 utilities and enhanced debug and copy.

...With the **KGS~80 Keyboard Actuator**

- Plug-in compatibility with the TRS-80... attractive enclosure contains actuator and interface.
- Least expensive way to get letter quality printing.
- No mechanical modifications to the typewriter are necessary.
- Rests firmly above the typewriter keyboard. Can be installed or removed in 5 seconds.
- Does not require any software to operate... works with Pencil, Scriptit and other word processing programs.
- Solenoids with soft plastic tips strike typewriter keys with the same force a typist would exert.

and 800 respectively. If your favorite film or developer is not used, it is easy to make an addition or change. If you do make changes, be sure to alter the developing times. These are found as data in line 1200 and within a video chart beginning at line 1500.

At line 2000 the program introduces the nine steps it will use to develop your black and white film. In addition to develop, stop and fix, the program includes other processing steps that are useful. For example, a step is devoted to hypo-clearing to speed up the washing time. The final list reads:

1. Load
2. Develop
3. Stop
4. Fix
5. Rinse (this is a pre-wash step, using water)
6. Hypo Clearing
7. Wash
8. Wetting Agent
9. Dry

This list should be complete enough to satisfy most darkroom workers.

When running the program, you are given the chance to review these nine steps. The review also covers a short explanation of what each step does. If you are familiar with the developing process, you can bypass this review by answering N (line 2020).

Several of the imbedded routines may be useful for those wishing to create their own film developing program. Developer Mixing (line 2500) and a subroutine that calculates chemical ratios (line 3100) contain the annoying mathematics that must always be computed before chemicals can be added to your developing tank.

It's easy to extract the routines for Develop, Stop, Fix, Wash and Dry. They are listed with associated timings in lines 2600-3000. If you do not use a hypo-clearing agent, or wish to make other modifications to the program's chemistry, this is the area of the program to review. All of these steps use the Clock routine found in line 3300 and the Alarm routine found in line 3600.

Table 1. Line Numbering for Film Development

Kitsz's machine routine are found in the data lines 200-400. Prior to the use of a particular sound, a value is POKED into 16526, and Bebybeep is called using X = USR(0).

Program Graphics

Notice that the cover (line 100) is supposed to represent a picture of a strip of 35mm film. The blank film magically develops into the title, Film Development. All this is intended to dazzle your eyes and leave you entertained, while the DATA statements (line 200 on) are read. I find this approach superior to a message such as "Please wait" or "I'm working."

The second use of graphics also represents a strip of film. The subroutine in lines 3800-3870 also uses a graphic strip of film designed as a screen prompt. A value is assigned to the Y-axis, corresponding to a horizontal line position. This value in conjunction with the X values 0-127 is used in

3870	Broken Line
3900	Error Message

Table 2. Film Development Variables

the Horizontal Line subroutines to SET the line.

SET and RESET are preferable here over other more rapid graphics, such as PRINT@ STRING, precisely because they are slower. The activity of a moving line is more eye-catching than an instant line.

At the very end of the listing is a short Error subroutine (line 3900). This is called in the case of an illegal input. This subroutine prints a polite "You have done wrong" message, and then, once again, returns you to the original input request.

There you have it. The program is somewhat long at 11K, but it contains many useful routines that can be used in other programs. A cassette version is available from myself. The program should be easy to follow by referring to Tables 1 and 2 and the REM statements. Also the line numbering should make it easier to separate each routine. ■

WE MEAN BUSINESS!

BUSINESS SOFTWARE THAT IS

USE YOUR TRS-80* FOR MORE THAN FUN AND GAMES

THE DATA DOUBBER \$49.95

Duplicates any program tape to TRS-80 quality. Reconstructs data pulses to ensure accurate CLOADs. Permits easy loading of even poor quality commercial tapes with out constant volume adjusting. Money-back guarantee if not satisfied.

THE ELECTRIC SECRETARY \$75.00

A powerful word processor to turn your TRS-80 into an automatic typewriter. Features page numbering, movable margins, headers, variable page length, and title centering. Enter text, revise, correct, and output to printer page for matted, justified, even hyphenated as required. Cross-coupling files permits individually addressed form letters. Complete with upper/lower case conversion information on diskette. Specify if RS232 adapter is installed in interface.

MAILROOM PLUS \$75.00

A versatile and powerful mailing program to print labels by sequential coding zip, city, state, customer ID code, even last name. Sorts by any code in minutes and stores sequentially in a single string (approx. 1500 records per diskette). Includes AUTOPRINT. Supplied on diskette.

MINIMAIL \$50.00

A compact version of MAILROOM PLUS but without customer coding. Features alphabetical look-ahead for duplicates. Supplied on diskette.

FORMLET \$35.00

Generates form letters from MINIMAIL records. Prepare your letter, bulletin notice advertisement, etc. then load the MINIMAIL files. Your printer will print the inside address letter and repeat for each name in the file—all properly spaced and justified. Supplied on cassette.

AUTOBOOT \$15.00

Simplifies automatic BASIC program loading from your DOS. Permits sequencing through your choice of DOS commands, selects files and memory size you specify, and loads or runs selected program. Allows user to see directory and free space before program runs automatically. Supplied on cassette.

SIR ECHO \$10.00

A handy program to make your printer work like an electric typewriter. Use alone or merge with your programs to make what appears on the screen echo to the printer. Supplied on cassette.

TELEFON \$20.00

Make your TRS-80 a smart terminal. Communicate with time share and other computers, bulletin boards, etc. Transfer programs over the phone. For disk systems with modem.

UPPER/LOWER CASE CONVERSION \$20.00

Reprint of KILBAUD article explaining how to modify the TRS-80 to display both upper and lower case characters. Kit contains step-by-step instructions, parts, and necessary software on cassette for case reversal, echo, and automatic line feed routines.

Micro Computers and Civil Engineering

The machine can do it — but you need the application package to make it work for you.

We have brought together the most powerful civil engineering tools available, USA-COGO (Civil Engineering Coordinate Geometry), USA-EARTH (Earthwork Design Quantities), and USA-STRESS (Structural Engineering System Solver). Each system provides a complete data entry and change system in addition to the powerful problem analyzer tied together through a common menu driver.

It's available to you now on your choice of CP/M or TRSDOS in source code BASIC or FORTRAN. For additional information, call us at (314) 878-1277, or write:

"Turning Dreams Into Reality"

SURVEYORS:

We have a fantastic package for the TRS-80! All of the programs perform calculations to full double precision accuracy. Here are some of the many features:

- *FIELD ANGLE TRAVERSE (with stadia reduction, inverse, etc.) store a traverse, with elevations, on disk
- *STADIA REDUCTION
- *UNIVERSAL TRIANGLE SOLUTIONS
- *VOLUME BY AVERAGE END AREA
- *CIRCULAR CURVE SOLUTIONS
- *HORIZONTAL CURVE LAYOUT (with tangent offsets)
- *UNIVERSAL INTERSECTIONS
- *VERTICAL CURVES AND GRADES
- *BORROW PIT VOLUME
- *COORDINATE TRANSFORMATION
- *AREA FROM POINT COORDINATES
- *INVERSE FROM COORDINATES
- *RADIAL TRAVERSE (coming soon)

DISC DRIVES FOR TRS-80* "FLIPPY"—250K bytes/disc FAST—5ms Track to Track Access

DOUBLE-SIDED

refers to number of read/write heads. Single-sided is one head, read/write one side only; double-sided is dual heads allowing read/write operations on both sides of the diskette. A double sided drive appears as two separate drives to the controller.

CAPACITY

unformatted capacity is the total amount of storage space available on a diskette. Typically 125K bytes on a 40 track 5.25in. diskette. Formatted capacity is the total USABLE storage space on a diskette. Typically 102K bytes on a 40 track 5.25in. diskette.

ACCESS TIME

the time required for the head to move from one track to the next. Typically 5 to 40 milliseconds (ms).

FREE TRIAL OFFER

Order your AEROCOMP Disc Drive and use it with your system for up to 14 days. If you are not satisfied for ANY REASON (except misuse or improper handling), return it, packed in the original shipping container, for a FULL REFUND. We have complete confidence in our products and we know you will be satisfied! ORDER TODAY!

WARRANTY

We offer you a 90 day unconditional warranty on parts and labor against any defect in materials and workmanship. In the event service, for any reason, becomes necessary, our service department is fast, friendly and cooperative.

100% TESTED

AEROCOMP Disc Drives are completely assembled at the factory and ready to plug in when you receive them. Each drive is 100% bench tested prior to shipment. We even enclose a copy of the test checklist, signed by the test technician, with every drive. AEROCOMP MEANS RELIABILITY!

ORDER NOW

- **MODEL 80-1 DISC DRIVE \$439.95ea.**
Single-sided, "Flippy", 48TPI.
(40 track; single density unformatted 125K bytes/side; double density unformatted 250K bytes/side).
- **MODEL 80-2 DISC DRIVE \$439.95ea.**
Double-sided, 48TPI.
(80 track/40 per side; single density unformatted 250K bytes; double density unformatted 500K bytes).

- **MODEL 80-1 DISC DRIVE \$439.95ea.**
Single-sided, "Flippy", 96TPI.
(80 track; single density unformatted 250K bytes/side; double density unformatted 500K bytes/side).

REAL VALUE

AEROCOMP offers the best value in microcomputer disc drives on the market today! Reliability, features and cost tough to beat. We deliver...and we stand behind our products, as evidenced by the only FREE TRIAL OFFER in the industry. Examine your systems needs and order today!

MYSTERY REMOVED

There appears to be some confusion in the terminology used to describe disc drives and their features. Here's what we mean:

- **"FLIPPY"** Allows the use of both sides of a diskette with a single-headed drive by simply turning the diskette over (Model 40-1).
- **TRACK DENSITY** specified in tracks per inch (TPI). Refers to the number of tracks per radial inch on the diskette. Typically 48 TPI=40 usable tracks and 96 TPI=80 useable tracks.
- **"DOUBLE DENSITY"** refers to recording density in bits per inch (bpi). Typically single density means data can be recorded up to 2,938 bpi; double density means data can be recorded up to 5,876 bpi.

COMPARE AND BUY AEROCOMP!

	"FLIPPY"	ACCESS TIME (track to track)	HEAD LOAD SOLENOID	DISC EJECTOR	CAPACITY (unformatted single density)	EASY-ENTRY DOOR	FREE TRIAL
AEROCOMP	YES	3ms.	YES	YES	250K bytes (both sides)	YES	YES
RADIO SHACK*	NO	40ms	YES	NO	109K bytes	NO	NO
PERCOM	YES	25ms	YES	NO	250K bytes (both sides)	YES	NO
MPI	NO	5ms	YES	YES	125K bytes	YES	NO
SHUGART	NO	40ms	YES	NO	109K bytes	NO	NO
SIEMENS	NO	25ms	YES	NO	125K bytes	YES	NO
TANBOM	NO	5ms	NO	NO	125K bytes	NO	NO
PERTEC	YES	25ms	YES	NO	250K bytes (both sides)	NO	NO
QAS*	NO	12ms	YES	NO	125K bytes	NO	NO

Factual material from current manufacturer's data sheets is believed reliable but cannot be guaranteed. Comparing Aerocomp Model 40-1 to similar models.

The TRS 80* expansion interface limits the track to track access time to 12ms

SOFTWARE CPU™

IF you're learning an instruction set, or analyzing an alien machine code program, or creating your own super software structures, then you are keeping instructional effects of CPU architecture and RAM all together in your head in a complex running mental map. Wheel! Instrument your imagination! TBUG-linking SOFTWARE CPU™ series of microprocessor simulations on the Level II 16K TRS-80™ display a complete parallel before/after set of Processor Programming Models with scrolling disassembler, CPU Registers, flags and stack, plus an intelligent RAM Window reacting selectively to RAM-interactive instructions. It's your entire imaginative overhead, clicking away in single-step or variable speed TRACE modes under your dynamic control. Plus a slug of debugging features you'd never imagine would be available in such low cost development software. Really program flow with a SOFTWARE CPU™.

Super STEP: Animated Z80 Programming Models, Disassembler, Single-step/TRACE modes with intelligent RAM Window, 5 user-selectable Windows, single and cumulative instruction times in microseconds, Reference Space, much more. Big booklet, a Z80 Software CPU. 16K Level II TRS-80, TBUG required. No. BL-0 . . . \$19.95

EMU 02: Animated 6502 Programming Models, Disassembles to 6502 mnemonics, Single-step/TRACE modes, 6502 counterparts to #B, #J, #R, #F and #Q commands, fast Cross-Interpreter, keyboard scan port with pin-instructions DB, EB control, paging in virtual address space, more. Big booklet & SYNTEREK card, it's a 6502 Software CPU. 16K Level II TRS-80, TBUG required. No. BL-1 . . . \$24.95

ACCEL: from Southern Software of England, is a COMPILER for Level II TRS-80 INTEGER BASIC. Properly structured (no dynamic redefinitions, correctly nested loops etc.) error-free BASIC programs are compiled by ACCEL to fast Z80 machine code for potentially spectacular speedups.

ACCEL Compiler for 16K Level II TRS-80 . . . \$44.95

AT LAST!

Mass production prices on this high quality software. Buy direct and save 50%. Now, also available for CBASIC on CP/M and MBASIC on HEATH HDOS.

DATA BASE MANAGER

Mod-I \$69 Mod-II \$199

You can use it to maintain a data base & produce reports without any user programming. Define file parameters & report formats on-line. Key random access, fast multi-key sort, field arith., label, audit log. No time-consuming overlays. 500 happy users in a year. Mod-II version has over 50 enhancements including 40 fields max. "IDM-M2 is great!" - 80-US

A/R

Mod-I \$69 Mod-II \$149

Invoices, statements, aging, sales analysis, credit checking, form input, order entry. As opposed to most other A/R, ours can be used by doctors, store managers, etc.

WORD PROCESSOR

Mod-I \$49 Mod-II \$49

Center, justification, indentation, page numbering. Mod-I version features upper/lower case without hardware change!

MAILING LIST

Mod-I \$59 Mod-II \$99

The best! Compare and be selective. Form input, 5-digit selection code, zip code ext., sort any field, multiple labels. Who else offers a report writer?

INVENTORY

Mod-I \$99 Mod-II \$149

Fast, key random access. Reports include order info, performance summary, E.O.Q., and user-specified reports. Many have converted their inventory system to ours!

GL A/R, A/P, & PAYROLL

Mod-II \$129 each

Integrated accounting package. ISAM, 100+ page manual, Uses 80 column screen, not 64. A \$1,000 value. Dual disk required.

L216, a cassette package of 10 business programs for Level II 16K systems, \$59. Includes word processor & data base. Poker game \$19.

Most programs are on-line, interactive, random access, bug free, documented and delivered on disks. Mod-I programs require 32K TRSDOS. Don't let our low prices fool you! If still not convinced, send SASE (28c) for catalog.

FREE IDEA SEEDS™

Have you ordered yours? If not, you better reconsider. More than 5000 happy subscribers think you don't know what you are missing. These are FREE programs for your TRS-80 and all you have to do to get them is send us a legal size SASE. That is all there is to it. Simple? You bet! Every month there's a new program and you really don't want to miss any of them! When you stop and think about it there are only three ways to build your software library. One way is to write the program yourself. Another way is to purchase programs. The best way is to have the programs given to you and that is just what we are doing! All FREE IDEA SEEDS are our own original programs and we want you to have them to use, rewrite, and expand.

Send your legal size SASE to:

MORE FOR YOUR RADIO SHACK TRS-80 MODEL I!

THE DATAHANDLER

DATABASE MANAGEMENT SYSTEM IN MMSFORTH

Now the power, speed and compactness of MMSFORTH drive a major applications program for many of YOUR home, school and business tasks! Imagine a sophisticated database management system with flexibility to create, maintain and print mailing lists with multiple address lines, Canadian or the new 9-digit U.S. ZIP codes, and multiple phone numbers, plus the speed to load hundreds of records or sort them on several fields in 5 seconds! Manage inventories with selection by any character or combination. Balance checkbook records and do CONDITIONAL reporting of expenses or other calculations. File any records and recall selected ones with optional upper/lower case match, in standard or custom formats. Personnel, membership lists, bibliographies, catalogs of record, stamp and coin collections—you name it! ALL INSTANTLY, without wasted bytes, and with cueing from screen so good that non-programmers quickly master its use! With manual, sample data files and custom words for mail list and checkbook use.

Technical: Handles data as compressed indexed sequential subfiles of up to 25K characters (9K in 32K RAM). Access 1-4 data diskettes. Modified Quicksort. Optionally precompiles for 5-second program load. Self-adjusts for many routine mode. Structured and modular MMSFORTH source code ideal for custom modifications.

THE DATAHANDLER V1.1, a very sophisticated database management system operable by non-programmers (requires Disk MMSFORTH, 1 drive & 32K RAM); with manuals, \$59.95*

mmsFORTH

THE PROFESSIONAL FORTH FOR TRS-80 MODEL I

for the TRS-80 from Micro-Mega

CASSETTE CONTROL UNIT

Speed up your cassette tape handling. Program locations on tape with an auto-reverse. Get protection from recording and playback glitches resulting from ground loops. Eliminate the tedious plugging and unplugging of recorder cables. The Micro-Mega Cassette Control Unit does all this and more. You get instant manual control of the recorder at the back of a switch. Starts or finds the beginning or end of a program. Fast forward switch and you're there. All cables remain plugged in at all times. The Micro-Mega Cassette Control Unit does a lot to improve the appearance of your TRS-80 system. At \$39.95, it's a 2 1/2" x 5 1/2" box, which snugly fits between the keyboard and your recorder. There is no need to move the recorder and all cables come neatly into the unit. The Cassette Control Unit is connected to the CTR of the recorder but may be used with most other recorders as well.

CASSETTE CONTROL UNIT.....\$37.95
Add \$1.00 for postage and handling

CPU MONITOR

Ever find yourself with a blank screen wondering what your computer is up to? The Micro-Mega Monitor can tell you, for example, if your CPU is in a loop with no data. It gives a long beep if no data is being received during keyboard input. The CPU Monitor lets you listen to all CSAs and CLOADs and will help you quickly find the correct recorder volume setting. If you have an expansion interface, you will always know whether the real-time clock is set or off. Moreover, you can hear it.

The Micro-Mega CPU Monitor gives a voice to the Z80 microprocessor in your TRS-80 by using a 4Mhz clock circuit to pick up the computer's output of the CPU, which has a speaker and plays through a loudspeaker. The pickup unit of the CPU Monitor, shown at left in the photo, goes under your TRS-80 keyboard. It is connected by a 3' cable to the speaker and control unit, which includes an on/off volume control and an LED power-on indicator. The monitor is powered by an AC adapter, shown at right in the photo. No batteries are needed and no beautiful connections to your TRS-80 are required.

By listening to the CPU Monitor, you will soon become familiar with the "personality" of the programs you run and whether they are executing in a normal way. (See "Gaming Environment" below.)

CPU MONITOR.....\$47.95
Add \$2.00 for postage and handling

THE ORIGINAL GREEN-SCREEN

The ever-elusive Green Screen has now arrived. It's the TRS-80 Video Display and gives you improved control with reduced glare. You get brighter, luminous green characters and graphics, the shades featured by many expensive CRT units. The Green Screen is closely matched to the color and texture of the TRS-80 Video Display and improves the overall appearance of your system. It is attached with adhesive strips, which do not tear your display unit in any way. The Micro-Mega Green Screen gives improved video display visibility for all applications and is especially effective in creating dramatic, high-impact displays for computer games. (See "Gaming Environment" below.)

THE GREEN-SCREEN.....\$13.95
Add \$1.00 for postage and handling

THE ULTIMATE STAR TREK PACKAGE

Take it to the computer games! This complete Star Trek package will transport you with endless excitement and challenge. In bear form, it includes computer games, a complete comprehensive instruction, a set of "Voyage Log" record sheets, and a hand-drawn "Trekmap and Planetary Chart".

The package is built around the latest version of Leland Michale's incomparable Star Trek II, a 13,000 byte program with a host of subtle and imaginative features, which include numerous dynamic and spectacular graphic displays. Star Trek II puts you in command of the Enterprise, cruising in a galaxy of 130 quadrants filled with uncharted planets, including hostile Klingon planets and black holes. You head at your disposal scanners, various weapons and defense systems, on-board computers, and a loyal crew. (You will need more of us to survive the Klingons.)

Your mission is to rid the region of Klingons and to locate five inhabitable planets, all within 300 star-days, before returning to Star Trek Headquarters where your small effectiveness as a starting commander will be scored. High scores are possible only with careful planning and effective battle tactics. The "Voyage Log" sheets will guide your strategy, and the "Trekmap and Planetary Chart" will give you a real edge in combat. (When you engage five Klingon ships you can't afford to miss.)

STAR TREK PACKAGE (for Level II, 16K only).....\$22.95
Add \$1.00 for postage and handling

CREATE YOUR OWN SPECTACULAR GAMING ENVIRONMENT (and save \$5.00)

The Enterprise is in battle with evil detector already at full power. As her captain, you are taking her into combat. The battle stations are ready in your ears. "CONDITION RED" flashes on your monitor screen. You call for more droids and try to get the coordinates of the quadrant where your scanners have detected Klingon ships. As you select the warp factor, you hear the reassuring clicking of your navigational gear as it activates the warp drive.

Suddenly, you break out of hyperspace and your monitor displays the chilling sight of three Klingon Battle Cruisers floating on your screen. Their evil weapons glow in luminous green against the black void of space. Moments later, you hear the characteristic rattling sound of Klingon laser weapons, and as you watch, high energy beams come hurtling toward the Enterprise in succession from each of the Klingon ships.

You have been hit! You hear the dismal sound of the damage control alarm as "DAMAGE TO WARP DRIVE" and "DAMAGE TO PHASERS" flash on your screen. The Klingons have stopped firing! The Enterprise is crippled, but your warp impulse is still intact and it's your turn now! You say in the command for photon torpedoes. As your screen again displays the position of the Klingon ships, you select a firing vector from your torpedo chart and say it in. Now you hear the buzz of your photon torpedoes as you see it speeding toward the Klingon ship. It strikes him dead-center! As you watch, the Klingon battle cruiser disintegrates, accompanied by a satisfying crackling sound.

Does the above scenario sound like fun? Well, it is! It's a small sample of what you will experience with Micro-Mega's Gaming Environment, which consists of 8 THE STAR TREK PACKAGE, THE GREEN SCREEN and THE CPU MONITOR. The first package and dynamic action reflects the Star Trek II program together with the "Voyage Log" and "Trekmap Chart" of the Star Trek Package. All of the unique graphic displays are greatly enhanced by the Green Screen. Finally, the uncanny sound effects are produced by the CPU Monitor, which faithfully puts up the FOR, NEXT loops and other CPU actions, which create the dramatic sound effects that accompany the ALERT and DAMAGE messages along with the warbling notes of the weapons tanks. Once you see that it, you won't get longer be satisfied with silent computer games.

Remember that with the Gaming Environment you also get all of the other excellent features of the CPU Monitor and the Green Screen for non-gaming applications. You also save \$5.00 off the combined cost of the individual items.

GAMING ENVIRONMENT.....\$79.85
Add \$3.50 for postage and handling

Terms: Check or money order, no CODs or credit cards, please. Add amount shown for postage and handling to price of the item. All items shipped within 48 hours by first class or priority mail. Virginia residents, add 4% sales tax.

The Best Printer in the World for the TRS-80!
We'll Stake Our Reputation On It!

Look at the Features!

- 1) 200 million character head warranty! Better than any competitor!
- 2) Works under the most demanding business applications!
- 3) A "Real" 9x7 DOT Matrix Impact Printer!
- 4) 80 characters per second!
- 5) Full upper and lower case!
- 6) Double width characters!
- 7) Supports TRS-80 Graphics! See illustration. (These graphics are exactly the same graphic codes as the TRS-80's. No special software required.)
- 8) Connects directly to TRS-80 with standard cable!
- 9) Friction & pinfeed, use roll paper, stationary or regular data paper!
- 10) 6 or 8 lines per inch
- 11) 80 and 132 columns.
- 12) Quiet operation.

TRS-80™ SOFTWARE

MACHINE LANGUAGE SOFTWARE

MONITOR #3 \$39.95
Disassembler, memory displays, memory move, search, verify, and modify, read and write object tapes, hexadecimal arithmetic, object code relocater, unload programs for disk, symbolic output tapes, 41 page instruction manual

MONITOR #4 \$49.95
Same as Monitor #3 but adds: save and read disk files, direct input and output of disk sectors, send, receive, or talk to another computer via RS-232-C interface, symbolic disassembly on disk

SMART TERMINAL \$49.95
Enables your TRS-80 to be used as a remote terminal to a time sharing system. Supports lowercase and full range of control keys. Automatic transmission between memory and host computer. Much more

FASTSORT \$9.95
Machine-language sorting program for use by Basic programs. Many times faster than other methods!

GAME OF LIFE \$5.95
John Conway's game of life shows patterns evolving and changing swiftly before your eyes. A dazzling demonstration program!

BASIC SOFTWARE

MAILING LIST \$69.95
Maintains mailing list files of over 1000 names per diskette. Add, delete, change, find name, machine language sort, print file

SMALL BUSINESS ACCOUNTING \$49.95
Based on Dome Bookkeeping Journal #612, keeps track of income, expenditures, and payroll for a small business of up to 16 employees. Daily, monthly, year-to-date summaries

HOME BUDGET \$49.95
Checkbook maintenance combined with records of income and monthly bills. Monthly and year-to-date summaries showing tax deductions

DATABASE MANAGEMENT \$29.95
Defines files of any description and maintain on cassette or disk. Add, change, delete, find, sort, justify, print, line print, total fields, write

Introducing

Interpretive Education, providing leadership in educational programs for basic living skills, introduces the new micro-computer educational (MCE) programs. The MCE programs are being thoroughly developed and tested with the cooperation of educators and computer programming experts. The new high technology product line is being generated to offer basic living skills on floppy disc and tape. They are designed for application on Apple II*, TRS-80** and other micro-computers.

Please call collect today for more information on how MCE programs can aid your teaching efforts with special needs audiences

PROGRAMMING TOOLS FOR YOUR TRS-80

INSIDE LEVEL II

The Programmers Guide to the TRS-80 ROMS

INSIDE LEVEL II is a comprehensive reference guide to the Level II ROMs which allows the machine language or Basic programmer to easily utilize the sophisticated routines they contain. Concisely explains set-ups, calling sequences, and variable passage for number conversion, arithmetic operations, and mathematical functions, as well as keyboard, tape, and video routines. Part II presents an entirely new composite program structure which loads under the SYSTEM command and executes in both Basic and machine code with the speed and efficiency of a compiler. In addition, the 18 chapters include a large body of other information useful to the programmer including tape formats, RAM usage, relocation of Basic programs, USR call expansion, creating SYSTEM tapes of your own programs, interfacing of Basic variables directly with machine code, a method of greatly increasing the speed at which data elements are stored on tape, and special precautions for disk systems. **INSIDE LEVEL II** is a clearly organized reference manual. It is fully typeset and packed with nothing but useful information. It does not contain questions and answers, ROM dumps, or cartoons. **INSIDE LEVEL II..... \$15.95**

TELECOMMUNICATIONS PROGRAM

This program allows reliable high speed file transfers between two disk-based computers over modems or direct wire. It is menu driven and extremely simple to use. Functions include real-time terminal mode, save RAM buffer on disk, transmit disk file, receive binary files, examine and modify UART parameters, program 8 custom log-on messages, automatic 16-bit checksum verification of accurate transmission and reception, and many more user conveniences. Supports line printers and lowercase characters. With this program you will no longer need to convert machine language programs to ASCII for transmission, and you will know immediately if the transmission was accurate. **TELCOM.....\$29.95**

PROGRAM INDEX FOR DISK BASIC

Assemble an alphabetized index of your entire program library from disk directories. Program names and free space are read automatically (need not be typed in) and may be alphabetized with a fast Shell/Metzner sort by disk or program. The list may also be searched for any disk, program, or extension; disks or programs added or deleted; and the whole list or any part sent to the printer. Finally, the list itself may be stored on disk for future access and update. "The best thing since sliced bread" (January issue of '80 Microcomputing). One drive and 32K required. **INDEX.....\$19.95**

SINGLE STEP THROUGH RAM OR ROM

STEP80 allows you to step through any Basic or machine language program one instruction at a time, and see the address, hexadecimal value, Zilog mnemonic, register contents, and step count for each instruction. The top 14 lines of the video screen are left unaltered so that the "target program" may perform its display functions unobstructed. **STEP80** will follow program flow right into the ROMs, and is an invaluable aid in learning how the ROM routines function. Commands include step (trace), disassemble, run in step mode at variable step rate, display or alter memory or CPU registers, jump to memory location, execute a CALL, set breakpoints in RAM or ROM, and relocate to any page in RAM. The display may also be routed to your line printer through the device control block so custom print drivers are automatically supported. **STEP80.....\$16.95**

4 SPEED OPTIONS FOR YOUR TRS-80!

The SK-2 is the most versatile clock modification available for the TRS-80. Speeds may be switched between normal, an increase of 50%, or a 50% reduction; selectable at any time without interrupting execution or crashing the program. Instructions are also given for a 100% increase to 3.54 MHz, though the TRS-80 is not reliable at this speed. The SK-2 may be configured by the user to change speed with a toggle switch or on software command. It will automatically return to normal speed any time a disk is active, requires no change to the operating system, and has provisions for adding an LED to indicate when the computer is not at normal speed. It mounts inside the keyboard unit with only 4 necessary connections for the switch option (switch not included), and is easily removed if the computer ever needs service. The SK-2 comes fully assembled with socketed IC's and illustrated instructions. **SK-2.....\$24.95**

RAM SPOOLER AND PRINT FORMATTER

This program is a full feature print formatting package featuring user definable line and page length (with line feeds inserted between words or after punctuation), screen dump, and printer pause control. The serial version allows baud rate selection from the keyboard. In addition, printing is done from a 4K expandable buffer area so that the LPRINT or LLIST command returns control to the user while printing is being done. Ideal for Selectric or other slow printers. Allows printing and processing to run concurrently. Please specify PARALLEL or SERIAL (RS-232 interface) version. **SPOOLER.....\$18.95**

DUPLICATE SYSTEM TAPES WITH CLONE

Make duplicate copies of ANY tape written for Level II. They may be SYSTEM tapes (continuous or not) or data lists. The file name, load address, entry point, and every byte (in ASCII format) are displayed on the video screen. **CLONE.....\$16.95**

MACHINE CODE FAST FOURIER TRANSFORM

This complete package includes 3 versions of the machine language FFTASM routine assembled for 16, 32, and 48K machines, a short sample Basic program to access them, a 10K Basic program which includes sophisticated interactive graphing and data manipulation, and a manual of instructions and examples. The machine language subroutines use variables defined by a supporting Basic program to make data entry and retrieval extremely fast and easy for custom implementation. They perform 20 to 40 times faster than their Basic equivalent (256 points in 12.5 seconds), and require less than 1550 bytes of memory. **FFTASM.....\$49.95**

FOR THE MODEL II

LYNC

from Midnight Software

High level data communication for the Model II with CP/M. **LYNC** will send and receive any file with automatic error checking and retries. Either end may initiate file transfers, and multiple files may be sent with wildcard filenames. Remote or local directories may be called from within the program. Allows full protocol, non-protocol, and real-time conversation modes. May be used over phone lines at 300 baud or direct to another computer at up to 9600 baud. Also available for other CP/M computers. **LYNC.....\$95.00**

**MUMFORD
MICRO
SYSTEMS**

ORDERING: Complete satisfaction guaranteed. This full refund will include all Model II programs are shipped on cassette unless so indicated. For a formatted (CP/M) disk, include 25¢ postage and handling. Credit card orders will bill using the Visa, MasterCard and G.C. rates apply.

Box 435-E Summerland, California 93067 (805) 963-4557

FOR USE WITH LOWER
CASE MODIFICATION

SUPERSCRIPT

by Richard Wilkes

With SuperScript, one can underline, boldface, insert text, slash e's, subscript, set 10 pitch, set 12 pitch, and of course SuperScript.

One can bring up a Directory (F3) and can also kill a file (Command K).

SuperScript has drivers for serial and parallel printers.

MAKES IT BETTER

SuperScript is a series of machine language programs which permanently customize programs so that a number of additional features are available. These include:

Ability to get directory or to kill files from within SuperScript. TRSDOS or NEWDOS can read SuperScript files. Text can be inserted into unjustified lines during printout e.g., inserting a name after "Dear" and before the colon. For this purpose a lowercase driver is included.

On printers that can backspace, underlining and slashed zeroes (0) are options. On Diablo and NEC printers, one can superscript, subscript, underline, boldface and select 10/12 pitch.

Serial and parallel drivers are included on the disk. You can customize these drivers for use with other types of letter quality printers. The serial drivers are included which use the ETX/ACK protocol for 1200 baud communications. Furthermore, printer drivers can be protected in high memory.

The "L" command used to load a file now requires a filespec to avoid destroying text buffer if the question mark is omitted from the "L" Command.

Available on disk for TRS-80* Level II with 32k, one disk drive and lower case modification for \$29.95. See your dealer for this and other quality Acorn Programs.

ADVANCED BUSINESS SOFTWARE FOR THE TRS-80

(Now Available For Model II Also)

* FORECASTING * RISK ANALYSIS * U.S. MACRO MODEL

If you're serious about improving your business with a computer, why not use the best business planning software available? Dr. David M. Cherub has made the most powerful and successful business analytical techniques available to micro computer users.

All programs listed below are in Basic, for 32K (or more) disk based TRS-80 systems.

BUSINESS PLANNING PACKAGE for FORECASTING - An integrated set of forecasting programs to handle a variety of business forecasting needs from Trend Analysis to Advanced Multiple Regression (100 pg. User Manual) \$99.

INVESTMENT RISK ANALYSIS - The major ingredient in any investment is uncertainty. This program accounts for cost changes, shifting revenue streams and interest rate fluctuations. Now you can manage risk. (35 pg. User Manual) \$99.

U.S. SIMULATION MODEL - Knowing where the economy is going and how it reacts to government fiscal and monetary actions can save you a lot of money. This is a user oriented economic situation model constructed to professional standards (50 pg. User Manual) \$199.

NOTICE TO CUSTOMERS:

Because of the tremendous increase in recent orders, our shipping response time has slowed. We are expanding in order to correct this situation. But for the next month our shipping date will average one week after receipt of your order.

To order CALL 313/424-3852, or write to APPLIED ECONOMIC ANALYSIS, 4005 Locust Ave., Long Beach, CA 90807.

For Software Think BCC

- ◊ **Mail Base 80** MOD 1 (Requires 48K & 4 drives) \$69.95
MOD 11 (Requires 48K & 4 drives) \$129.95
A RANDOM ACCESS program which keeps track of an unlimited number of entries. Plus it allows direct access of information in any order. Today, list all people who have outstanding bills & tomorrow produce a list in zip-code order. EXCELLENT!!!
- ◊ **Oil Delivery** MOD 11 (REQUIRES 48K & 4 drives) write for price quote.
A system for the 80s. This system handles everything for the heating industry.
- ◊ **Vendor** MOD 1 (Requires 48K & 2 drives) \$39.95
This program keeps track of an unlimited number (650 per disk) of vendors. Allows direct access of coded information by vendor number, & also permits access by various other fields.

For Supplies Think BCC

- ◊ **Disks & Tapes** 5 1/4 inch diskettes 3M Brand \$49.95 (10 in plus. case)
8 inch diskettes 3M Brand \$64.95 (box of 10) 5 1/4 inch tapes \$39.95 (box of 10)
Cassettes Very High Quality \$16/doe C20's. ADD 10% STAC stackable cassette holders. Each holds 8 cassettes. \$3.49ea
- ◊ **Printers** The fabulous BASE 2 PRINTER 96 char ASCII with tractor feed & 2K buffer. This printer just can't be beat!!! \$649.00 (2 for \$1200.00)
RECONDITIONED CENTRONICS 102A (330 char/sec!!!) \$1500.00

The Music Box

**The finest music
synthesizer for the TRS-80
is now only \$149.**

By focusing on direct sales to the consumer, and eliminating the dealer markup, we can now offer the MUSIC BOX at this new low price!

LOOK AT THESE IMPORTANT EXTRAS:

- **FOUR VOICES, WITH SEVEN-OCTAVE RANGE AND WAVEFORM CONTROL** Hardware features built-in amplifier with volume control. In fact, THE ONLY THING YOU HAVE TO SUPPLY IS A SPEAKER (and, of course, a Level II 16K TRS-80!). We supply the rest, even the speaker cable. The Music Box plugs into the keyboard expansion-port or EI bus extension connectors.
- **BETTER SOUND** Latching 8-bit DAC, plus precision filter to eliminate unwanted high-frequency noise.
- **SAFER FOR YOU AND YOUR COMPUTER** The electronics are attractively packaged in a rugged enclosure with separate UL-approved power supply. This is not an exposed board!
- **COMPLETE ADDRESS DECODING** Essential for compatibility with current and future music and voice peripherals.
- **90-DAY LIMITED WARRANTY**
- **PLUS!** Purchasers of the MUSIC BOX will receive "Newtechniques", the micro computer music newsletter featuring music education, sound effects software and ideas for interfacing the MUSIC BOX to your BASIC programs.

MUSICRAFT

And you get the best in microcomputer music software... MUSICRAFT 1.2, which consists of five machine language programs:

1. **Intelligent Music Editor** (not merely a text editor)
 - Catches notation errors immediately upon entry
 - Has full complement of cursor controls
 - Uses notation similar to standard music notation
 - Supports unlimited tempo, key signature, automatic transposition, and "instrument" changes throughout a piece
 - A special microtone option divides the octave into up to 99 increments, for producing glissandos and modern electronic music.
2. **Fast multi-pass compiler** supports powerful chorus and repeat features.
3. **Play program with four modes** Standard mode for individual songs. **Julie box** mode for creating your own song menus. **Live keyboard** mode for turning your computer into a real-time instrument. **Rehearsal** mode for playing along with your computer.
4. **Waveform program** lets you create instrument sounds in addition to the 14 supplied.
5. **Utility program** gives hard copy print out
 - Transmits music files via modem.

The Music Box

Including power supply, speaker cable, 100-plus page manual in custom binder, and Musicraft tape and disk versions on cassette, plus demo music

\$149.

COMPUTER SYSTEMS, INC.

IF YOU LOVE THE LIMITLESS WORLDS OF IMAGINATION,
YOU'LL GO CRAZY FOR OUR

COMPUTER GAMES

HERE'S 4 NEW TITLES FROM DISCOVERY GAMES,
EACH IN ITS OWN VINYL PERMANENT STORAGE BOX.
AVAILABLE ON TAPE FOR TRS-80 LEVEL II, 18K; PET,
16K; AND APPLE II APPLESOFT, 16K, FOR BASIC.
(All include graphic displays and game-time play, in single
scenarios packed with variables, for solo play.)

JAGDSTAFFEL—As Commander of the Luftwaffe fighter
squadron based at Zielhafen, can you protect the U-boat
base against approaching American bombers?

MIGS AND MESSERSCHMITTS—The Blitzkrieg approaches
Leningrad, and unless you as squadron leader can stop the
approaching bombers, the city will be pounded into
submission!

RAF: THE BATTLE OF BRITAIN—France has fallen. Now
Luftwaffe bombers hammer England. Your RAF squadron
must protect London from the Blitz.

WINGED SAMURAI—Rabaul Harbor is the most important
base on the road to Australia, and you, as Commander of the
Imperial Japanese fighters based there, are responsible for the
defense of the ships in harbor. The Americans are coming...

AUTOMATED FILE HANDLING PROGRAM

So far beyond those so-called "data base
managers" that it requires a new term —
"automated file handling program."
Describe, create or update any type of file,
then automate the calculation, sort and
report phases of the task.

\$ 99.95

TIGER-GRAP™

Create engineering, scientific or just fun
graphics on your IDS 440G printer. Resolu-
tion is 495 x 575. Easy Basic programs
provided for data entry and machine language
modules for speed. Several pictures can be
concatenated along the Y-axis for larger
graphs.

Model I (48k, 2 disk)	\$ 149.95
-----------------------	-----------

DEBRYMAR™

The only totally flexible data base manager
for the Model I or Model II. No fields or
keys. Automatic linking of all related
information allows instant retrieval by
subject, type of information, partial
contents; even performs analogies.

Model I (48k, 2 disk)	\$ 79.95
Model II (84k)	\$ 99.95

Software for TRS-80s

UTILITIES FOR MODEL I

PENCIL FIX - Modify Pencil to use RS
lower case modification. Redefines
control key to be the @ key and switches
the lc/uc toggle to the shifted Break
key. Save your warranty.
Disk \$ 14.95

SPOOLREL™ - An in-memory print
spooler that runs in Model I 32k or 48k
disk system, under Newdos* or
Trsdos*. Fully relocatable code and
buffer. Buffer size is user selected. A
true background spooler at an
unbelievably low price.
32k, disk \$ 24.95

PRINT-CENTRAL™ - A utility for
those with smart printers. To send a
control code to your printer, simply
press the Clear key and the appropriate
letter key and see instant execution.
Any code from 1 to 31 may be sent.
Model I only \$ 24.95

SUPERLIST - Allows you to debug and
edit your programs with live cursor
control. Trace Opcodes and Gotos.
Global search. Insert lines.
48k, disk \$ 29.95

SUPERPRINT - Format your hardcopy
listing to suit your needs, with spaces
between lines, wider margins, if you
choose. Even will trace Opcode routines
to make debugging easier.
32k, disk \$ 14.95

Radio Shack Versus The Competition

From the moment a 4K TRS-80 owner first looks longingly at the 16K memory size of a friend's CRT, the urge to upgrade is countered by uncertainty. Should the next stop be the nearby Radio Shack or the enemy at Vinnie's House of Computers?

David D. Busch
515 E. Highland Avenue
Ravenna, OH 44266

If you are a dedicated hardware hacker for whom words like Altair or 8008 hold deep nostalgia and who is not frightened by NAND gates, the question is irrelevant. You can take anything even remotely compatible with your TRS-80 and make it work, somehow. If your gear breaks down, you can fix it.

In introducing their affordable turnkey system, Radio Shack attracted a horde of new computerists loathe to homebrew anything more complicated than a cup of coffee. These microcomputer hobbyists want to be able to plug in their systems and use them with a minimum of trouble.

There are seven common areas of expansion in which the owner is faced with Tandy vs. other choices:

- Additional keyboard memory;
- Expansion interface memory;
- Disk drives and other mass storage alternatives;
- Lowercase conversion kits;
- Software;
- Printers;
- RS-232, Modems, etc.

Keyboard Memory

For those who are really new to the TRS-80, this subject was hot some months back. Radio Shack was charging \$299 for

the upgrade from 4K to 16K, and you didn't even get to keep your 4K RAM chips.

Some enterprising souls who noticed that Tandy was selling TRS-80s in the ten thousands began offering 16K memory upgrade kits for \$150 or less. And less. And less. At this writing, Radio Shack has come down to \$230 for the first 16K of memory, with a \$119 tag on each additional increment, but you get a nifty calculator-style keyboard with the CPU memory upgrade.

The RAM chips alone can be had from other sources for \$49 to \$89 with appropriate jumpers for the keyboard thrown in or available for a nominal fee. With prime chips from a reputable source with a good guarantee, there seems to be little potential problem in using non-Radio Shack memory in your keyboard. The extremely timid might want to wait until the 90-day warranty has expired before opening the CPU, but the actual upgrade is a simple task for even the notoriously fumble-fingered.

My chips were Ithaca Audio RAMs purchased in the \$119 dark ages, and though the keyboard has been back at Radio Shack for several mods since then I've had no complaints from the service personnel and absolutely no problems.

Expansion Interface Memory

With memory separated from the Z-80 chip by a foot and some strange ribbon cable, memory compatibility becomes more important. Those who have problems pinning down what's wrong when their computer ails may not like the added variable of

dubious memory chips. I've seen knowledgeable hardware folks shuffle different RAM chips in and out of their expansion interfaces, running various memory tests until they found a set of eight or sixteen that performed to their satisfaction.

Many brands of memory probably work perfectly well in any interface. At the time I purchased mine, Radio Shack was phasing out buffered interface cables, retrofitting twisted pair mods to other units, and, in some cases, swapping memory chips, because a few clinkers had slipped into their own supply. With the price down to \$119, it was worth an extra \$50-70 per 16K to be able to dump the thing in their laps if my RAMs became forgetful. I upgraded to 48K, using Radio Shack memory for the final 32K.

Mass Storage Alternatives

The specialized mass storage devices, Stringy Floppies, Poor Man's Floppies, etc. exist for a very good reason: Cassette data transfer and program storage/retrieval is darned slow. Each of these can be had for hundreds of dollars less than the expansion interface/disk drive combination. If you have no need of memory beyond 16K, and don't need or can't afford the features of disk systems, by all means consider one of the alternatives. They can't hurt your system; Radio Shack offers nothing to compare with them and many happy users attest to their reliability.

In my case, I was aiming at a disk system. I carefully considered all the alternatives,

*In writing 2,000 words
per day on my computer,
I tend to look at the
screen a lot, and couldn't
bear the lopsided
character set of the
simplest modifications*

but still chose to purchase two Radio Shack disk drives. Others, with different circumstances, might be better off with one of the other brands. At our local users' group, I had the chance to observe and test a variety of disk drives before making my decision. The pros and cons were as follows.

The other brands of drives that I liked best offered quicker track-to-track access times for faster operation, supported 40 tracks vs Radio Shack's 35, and could write to both sides of a 5 $\frac{1}{4}$ -inch diskette. They were generally about \$140 cheaper, to boot.

I discovered that Radio Shack was not quite as serious a disadvantage as might appear on the surface. The drives that I ended up purchasing function quite well as 40-track drives, using a 40-track DOS, such as NEWDOS+. I've punched extra index and write-enable holes in more than 100 diskettes, and have found only a few that are not fully usable on both sides. Various patches have speeded up my drives' access times a little, but I'm entirely satisfied with their speed. My system is booted up before the CRT warms up in the morning, and most programs are loaded and ready to run before I can decide what to do with them.

About that \$140. . . I count that as an investment in maintaining nearby, convenient service facilities. As a writer who depends heavily on my computer for word processing, I'm not pleased with the idea of sending a much needed disk drive off to the manufacturer for repair. My local Radio Shack not only provides one day turn-around on fixes, but, in one case, gave me a totally new drive rather than make me wait while the lemon I purchased made its third trip back to the shop.

Because I use my computer in business, that \$140 extra I paid for each of the drives can be equated with potential lost income, so the choice for me was an easy one. For those of you who must weigh computer purchases against an extra day of vacationing,

or that new lawnmower, service might have an entirely different perspective.

In summary, both Radio Shack's and other manufacturer's drives offer nearly equivalent operation, but, the non-hardware oriented microcomputer hobbyist may want to have the Radio Shack service center to lean on in times of distress.

Lowercase Conversion Kits

This is another sticky area, because of the wide disparity in cost between Radio Shack's \$59 lowercase mod, and the \$15-\$30 price tag on other conversion kits.

I elected to go for the \$59 lowercase, because of my personal reluctance to tamper with my keyboard, and the importance I placed on descenders. In writing 2000 words per day on my computer, I tend to look at the screen a lot, and couldn't bear the lopsided character set of the simplest modifications. The more sophisticated kits came close enough in price to Radio Shack's mod that the difference to me was negligible.

I have experienced few of the forewarned problems that might be caused by the changes made by the modification. When

the lowercase driver is loaded, NEWDOS seems to perform exactly as intended, including the JKL junction. Some programs that PEEK at video memory are unnerved at finding the value of 1 for an uppercase A, rather than the expected 65. It is simply a matter of inserting a line along the order of:

```
XXX A = PEEK(N); IF A < 32 THEN A = A + 64
```

where XXX is the line number, A is the variable used for whatever purpose in the program, and N is the video memory address (between 15360 and 16382 decimal).

Other lowercase modifications give you a control key, but at the time I ordered mine, I already knew that Scripsit had everything I needed in a word processing program.

Software

Scripsit might be a good place to start, because this program could be the beginning of a much needed resurgence for Radio Shack's software reputation. It works! After 15 years of writing on manual and electric typewriters, I hope I never see their ugly little keyboards again.

All is not so rosy with other Shack software. As an early purchaser of their Memory Information System, which didn't do anything, but did it admirably fast, I can attest to that. Other reviewers

THE ALTERNATE SOURCE

The magazine of advanced applications and software
for the TRS-80

LIMITED TIME OFFER !!!

NOW YOU CAN SAVE &
GET THE SECOND YEAR OF
THE ALTERNATE SOURCE

Do you know what the three T's of computing are? **T**ips, **T**utorials, and **T**echniques. THE ALTERNATE SOURCE is the magazine for the advanced TRS-80 enthusiast and programmer. We travel into the internal workings of your systems and provide indepth articles on your machine and its operations. We will teach you to become a better programmer, both in Basic and Assembly Language.

You can receive the second year of this handy digest size storehouse of TRS-80 information, bi-monthly for only \$9.00. This Limited Offer is only good until midnite December 31, 1980. This Offer represents a \$3.00 savings off the normal subscription price. This offer not good outside the USA. Canada and Mexico subscribers \$15.00 per year. all other Foreign subscribers \$18.00. **SUBSCRIBE NOW !!!**

JUST LOOK AT OUR READERS COMMENTS...

"I was so pleased at being approached as if I knew something about computers and programming, that I not only read every word, but I am enclosing a check for nine dollars."

CANOGA PARK, CA

"... I have confidence that THE ALTERNATE SOURCE will climb to the top. You are already the best in content for the serious programmer. ... I literally tear your magazine apart for the wealth of information and ideas, and consider TAS as important as the DOS that we use."

PITTSBURG, PA

"Okay, I'm hooked. Enclosed is my \$9.00 check."

FRANCONIA, VA

"I think your approach is terrific; a magazine devoted to someone other than the beginner has been sorely needed on the market for a long time."

PENOLETON, IN

"There are enough TRS-80 owners around to warrant a magazine that can serve as a basic reference tool for the serious programmer. TAS is well on the way to providing this..."

CORONADO, CA

"Through good fortune, I very recently picked up a copy of your publication at a local computer shop. After examining its contents for just one day, I can not resist submitting my subscription."

TAS PRESENTS...

TRAKCESS

Written By: Roxton Baker

DOS USERS LOOK HERE

After much ado, we have decided to offer what is perhaps The Most Powerful Utility Yet For TRS-80 Disk Maintenance...

TRAKCESS was written with two very special goals:

- A. To bring under direct user control, almost every practical capability of the 1771 Floppy Disk Controller.
- B. To combine these capabilities into super powerful 'intelligent' functions whose only limitations are those of the user or machine.

'What does it all mean?' You ask, Good Question... WITH TRAKCESS, YOU MAY:

- Protect your own diskettes with special format variations you create!
- Utilize a potent 'pencil type' editor.
- Recover damaged diskettes: read, write, edit or create any track or sector, standard or not!
- TRAKCESS is capable of duplication of any sector, of any track including PROTECTED DISKETTES!
- Smart DUPLICATE command analyzes every track! (2 drives)
- PLUS MUCH, MUCH MORE

•• YOU CAN LEGALLY MAKE COPIES ••

TRAKCESS IS \$24.95. For every penny you add (up to five) you will be given a limited licence to make one copy of the diskette and documentation. This is the first in a new line of software to be marketed in this manner. The intent of this concept is to allow you and your friends to share the cost of adding to your software library.

.....This is a new concept. Please comment on it.....

\$16.95 on diskette

\$24.95 expanded

TAS PRESENTS...

ISAR

(Information Storage And Retrieval)

ISAR IS A LOW COST, HIGH QUALITY DATA BASE MANAGEMENT SYSTEM CAPABLE OF HANDLING ANY INFORMATION IMPORTANT ENOUGH FOR DISK STORAGE

ISAR consists of seven modules:

1. MENU. Easy user menu prompts and guides you through the entire process of creating and maintaining your valuable information.
2. CREATE A NEW FILE. You can specify up to ten different fields and define them as numeric or alphanumeric.
3. ADD RECORDS TO A FILE. This module has numerous error checking routines to insure accurate data entry.
4. CHANGE OR DELETE RECORDS IN A FILE. Keep your records up to date and accurate with this easy modify routine.
5. SORT A FILE. This sort routine is based on the Shell-Metzner sort for the fastest processing possible in Basic.
6. SCAN OR SEARCH A FILE ON SCREEN. You can either search for an occurrence, total numeric fields, scan through part or all of your file, or specify just one record.
7. LPRINT AND FORMAT REPORTS. Extremely versatile! You define everything. Includes a test pattern routine.

ISAR EXPANDED comes with three additional modules:

- One allows you to use your GSF program for even faster sorting on up to 10 different sort keys! Another will allow you to redefine a file by making an existing field larger or adding a field to each record. The last will merge two ISAR files with the same format.

reviewers have put in their two-cents' worth on the value of other Radio Shack programs intended for business and personal use. But, with gems like Scripsit issuing from Ft. Worth, the future looks brighter.

In the meantime, TRS-80 owners continue to revel in the treasure trove of well written, useful software available for their computer. Choosing between Radio Shack and other software to do the same job generally is no choice at all, especially in the area of disk operating systems and business programs.

There is always the danger of bugs in

software from unknown vendors, and a lack of support. But, it almost appears that an exception to Gresham's Law might apply to software: Good programs tend to drive out the bad. Only rampant piracy threatens the really creative programmers.

Printers

Hard copy devices are another big-ticket item fraught with discounting, price-cutting and heavy competition. At Radio Shack itself, features have mushroomed while prices for printers dropped drastically.

I saved \$500 to \$1000 by purchasing an Integral Date Systems IP125 printer on close-

out at a local computer store. Predecessor to the popular Paper Tiger, it boasts many of the same features, including eight different print sizes. There is no tractor feed, but it has a flat paper tray that allows me to feed 8 1/2 x 11-inch typing paper one sheet at a time just as if I were operating a photocopier.

The printing is sharp and legible (though there are no descenders on the lowercase letters), and I can send the copy off to a finish typist for letter-quality typing. Some of the magazines I write for, particularly computer magazines, don't mind receiving the dot-matrix printing, so I can forgo the last step. Until the day when I can afford a daisy-wheel type printer, my unit suits my needs perfectly.

Why not Radio Shack, considering the heavy use I give the printer? In this case, the local computer store offers in-town service. But, so far, the only problems I've had have been with mechanical elements. After 15 years of tangling with the linkages in a variety of typewriters, I'm entirely comfortable tinkering with the rollers, gears, and solenoids in my printer. Usually a small adjustment gets me up and running in a few minutes. I steer clear of electronic diagnostics, but these problems appear to be few and far between in the year I've used my IP125 daily.

Printer prices are dropping drastically. Be certain that the printer under consideration will mate with the TRS-80, and not just be made to mate. Except for writers, printers are rarely the must-have item that cause all operation to cease while repairs are underway. Even businesses can read their reports off the CRT screens if need be.

Modems and Serial Interfaces

There's not a lot of controversy here. Radio Shack's RS-232 serial interface is not outlandish at \$99, when you consider the trepidation that we non-hardware types feel at the thought of assembling even a simple kit.

Their \$199 modem is only \$10-\$30 more expensive than the suspiciously similar in appearance models available from other sources.

Take your choice: More sophisticated modems with extra capabilities, like auto-answer, are available, and some direct connect units contain their own serial interface. Whether you go with Radio Shack or not, the money involved is not huge either way, and it's difficult to go wrong. Even more so than printers, modems are not likely to be must items in anyone's computer system.

If the modem is the only peripheral connected to the serial interface, and no others, such as a printer, are dependent on the RS-232, it may be nearly painless to depend on the manufacturer for service.

When I get my own units, I'll probably lean toward Radio Shack's, if only for the ability to have them check out everything, from CPU on up, if something goes awry. ■

80 mention microcomputing when you query an advertiser

SIRIUS 80+ High Performance Low Cost Floppy Add-Ons!

The SIRIUS SYSTEMS 80+ Series of Floppy Disk add-ons are designed to provide unmatched versatility and performance for your TRS-80+. Consisting of four different add-ons, there is a 80+ Series Floppy Disk Drive to meet your needs.

COMMON CHARACTERISTICS

- 5ms track-to-track access time
- Auto-Eject
- 180 day WARRANTY
- Exceptional speed stability - 11/2%
- Single/Double Density operation
- Mix any or all 80+ Series on the SS Standard cable

SPECIFIC CHARACTERISTICS

The SIRIUS 80+1 - a single sided, 40 track Drive. Offering 5 more tracks than the Radio Shack model, it cost \$120 less. Formatted data storage is 102K/204K Bytes Single/Double Density.

SIRIUS 80+1 \$379.95

The SIRIUS 80+2 is a dual sided, 80 track (40 per side) Disk Drive. It appears to the TRS-80+ as TWO 40 track drives yet COST LESS THAN HALF THE PRICE! Even greater savings result since data is recorded on both sides of the media instead of only a single side. This unit may require the SS Standard cable. Formatted data storage is 204K/408K Bytes Single/Double Density.

SIRIUS 80+2 \$449.95

The SIRIUS 80+3 - a single sided, 80 track Drive. Offering 2 1/2 times the storage of a standard Radio Shack Disk Drive, the 80+3 greatly reduces the need for diskettes correspondingly. Additionally, because of the increased storage and faster track-to-track access time, the 80+3 allows tremendously

increased throughput for disk based programs! The 80+3 includes SIRIUS's TRAKS-PATCH on diskette (for use with 96 tpi drives). Formatted data storage is 204K/408K Bytes Single/Double Density.

SIRIUS 80+3 \$499.95

The SIRIUS 80+4 - a dual sided, 160 track (80 per side) 5 1/4" floppy Disk Technology, the 80+4 is seen by the TRS-80+ as two single sided disk drives. Thus, in terms of capacity, one 80+4 is equivalent to 4% standard Radio Shack drives - at a savings of over 73% (not to mention diskettes!!!). (With a double density converter the available memory is huge!) The 80+4 (a 96 tpi drive) includes TRAKS-PATCH on diskette and may require the SS Standard cable. Formatted storage is 408K/816K Bytes Single/Double Density.

SIRIUS 80+4 \$649.95

All 80+ Series Floppy Disk add-ons operate at 5ms track-to-track but are Expansion Interface limited to 12ms for the TRS-80+.

*TRS-80© of Tandy Corp.

TFORTH! - what It has to offer YOU!

TFORTH is a procedural FORTH type language which specifies a process rather than a desired result. Designed to run on the TRS-80+, TFORTH is a very powerful tool by itself or used in conjunction with Assembly Programming. A rich set of WORDS come with TFORTH and many features considered as "extra" with other FORTH languages are standard with TFORTH. These features include:

- Advanced Math Package
- Line Editor
- Macro Assembler
- Re-entrant Code
- Super Graphics Capabilities
- Sophisticated User Functions
- 140 Page User's Manual
- Virtual memory
- Interpreter
- Compiler
- Produces CMD Files
- Expandable
- And many, many other features

TFORTH from SIRIUS comes on diskette complete for the TRS-80+ with as little as 18K of memory and a single Disk Drive.

TFORTH \$129.95

*A story of how one users group
computerized election eve
returns for the local TV station.*

Tally With an 80

Roderick D. Graham
George L. Haller
1500 Galleon Dr.
Naples, FL 33940

Around the first of March, the News Editor of the local radio and television stations approached the Collier County Computer Club for assistance in the stations' presentation of the primary vote results for Collier county. The results of main interest were the Democratic Presidential Preference, with five candidates running; the Republican Presidential Preference, with nine candidates running; and the races for Committeeman and state committeewoman, with two candidates each. There were also three other contests to be reported: The constitutional amendment to increase the Homestead exemption, the bill to modify the duties of the Florida Supreme Court and the county-wide vote for a penny gasoline tax.

There are thirty-six precincts in Collier County and ballots were expected to run to about 20,000. The ballots were brought to the court house for computer processing and a summary of each precinct's results were duplicated and given to the media in hard copy. These summaries became available shortly after seven p.m., and it was expected that they would all be available by eleven.

Hourly News Reports

We agreed to input the precinct results into the computer as they were made available to us, and summarize them for hourly news reports through eleven p.m. The club decided to use the TRS-80. Several mem-

bers have this computer and we wanted two computers working, one as a backup. The expanded letters on our screen were better for viewing, and we could use the INKEY command to allow rolling from one full screen to the next without a question mark showing. We tried feeding our signal directly into the TV station modulator but we had better success feeding into one of their monitors from which they could pan their camera on and off as they desired. This monitor was coupled in parallel with our two computers and could be switched from one computer to the other by means of a simple single pole switch.

The programs were fairly simple to outline but the more we worked with them the more complex they became. We decided to work-up three programs: a main program, a backup program, and a reload program, for use in case of a bad crash to both computers. The Collier County Computer Club did not want to fall on its face in front of a county-wide audience, so we added many fail safe features to all three programs.

The main program accepted votes by precinct number, and candidate or proposition name. The input was then reviewed for corrections before going on to the next race in the precinct.

The main program menu was:

1. Enter a new precinct.
2. Display individual precinct results on the TV monitor.
3. Present the summary of the available precincts on the TV monitor.
4. Save data to disk.
5. Recover data from disk.

The backup program automatically saved only the summary data on disk for re-

covery purposes after each precinct entry. At the operator's discretion, a printout could be made on a small printer so that in case of a catastrophic failure, we could re-enter the summary data from the keyboard and go on from there, using either the third program or, by entering the summary data as if it were a single precinct data and changing the total number of precincts, use program number one.

Run Simultaneously

We ran the first two programs simultaneously and they were periodically compared for accuracy. In the dry runs before election day we experienced some disk save failure because of power line glitches, so we decided to run the main program without saves. At the end of the evening we were able to save the whole data array without any problem. The array was 28 candidates by 36 precincts, over 1000 elements.

The logistics were as follows. There were two computer operators and two readers. A project manager made sure the overall operation ran smoothly. He received the summary sheets, edited the extraneous material and passed the sheets to the readers. He also kept an account of the precinct sheets processed.

The evening was completed successfully, and while we didn't need the backup computer for the TV presentation, it was comforting to see it performing and checking the results of the main computer. The media people were very generous and gave us quite a bit of on-the-air publicity during the operation. The listings of the programs we used are available from the Collier County Computer Club, c/o Dr. G. L. Haller, 1500 Galleon Dr., Naples, FL 33940. ■

FROM THE LEADER IN UTILITY SOFTWARE FOR THE TRS* COMPUTERS

★★ NEW ★★ HARD/SOFT DISK SYSTEM (MOD II) \$400

The Hard Disk Software Implementation You Have Been Waiting For!! MOD II TRSDOS compatible — using Cameo controller interface to popular large hard disk fixed/removable combinations (Ampex, CDC, Diablo, Pertec, Wanco, etc.). Compatible with your existing programs — change only 'filename'. All disk BASIC statements identical. Improved dynamic file allocation. A single file can be as large as one disk — 20 megabytes or larger. Alternate mode allows 24-million byte record range. Directory expandable to handle thousands of files! Includes special XCOPY, DCS, and SZAP utilities for use with hard or soft disks. Parameterized FORMAT utility includes options for specifying the number of sectors/track, platters/disk, sectors/granule, sectors/directory, etc.

★★ NEW ★★ BASIC LINK FACILITY 'BLINK' (Mod I Min 32K 1-disk) \$25 Mod I, \$50 Mod II

Link from one BASIC program to another saving all variables! The new program can be smaller or larger than the original program in memory. The chained program may either replace the original program, or can be merged by statement number. The statement number where the chained program execution is to begin may be specified!

INFINITE BASIC \$49.95 (Mod I Tape or Disk)

Extends Level II BASIC with complete MATRIX functions and 50 more string functions. Includes RACET machine language sorts! Sort 1000 elements in 9 seconds!! Select only functions you want to optimize memory usage.

INFINITE BUSINESS \$29.95 (Requires Infinite BASIC)

Complete printer pagination controls — auto headers, footers, page numbers. Packed decimal arithmetic — 127 digit accuracy +, -, *, /. Binary search of sorted and unsorted arrays. Hash codes.

COMPROC \$19.95 (Mod I — Disk only)

Command Processor. Auto your disk to perform any sequence of instructions that you can give from the keyboard. DIR, FREE, pause, wait for user input, BASIC, No. of FILES and MEM SIZE, RUN program, respond to input statements, BREAK, return to DOS, etc. Includes lowercase driver software, debounce and screenprint!

GSF \$24.95 Mod I, \$50.00 Mod II (Mod I Tape or Disk — Specify Memory Size)

Generalized Subroutine Facilities. The STANDARD against which all other sorts are compared! Machine language — fast and powerful! Multi-key multi-variable and multi-key character string. Zero and move arrays. Mod II includes USR PEEKS and POKES. Includes sample programs.

DSM \$75.00 Mod I, \$150.00 Mod II. (Mod I Min 32K 2-drive system, Mod II 64K 1-drive)

Disk Sort/Merge for RANDOM files. All machine language stand-alone package for sorting speed. Establish sort specification in simple BASIC command file. Execute from DOS. Only operator action to sort is to change diskettes when requested! Handles multiple diskette files! Super fast sort times — improved disk I/O time make this the fastest Disk Sort/Merge available on Mod I or Mod II.

UTILITY PACKAGE \$150.00 (Mod II 64K)

Important enhancements to the Mod II. The file recovery capabilities alone will pay for the package in even one application! Fully documented in 124 page manual! XHIT, XGAT, XCOPY and SUPERZAP are used to reconstruct or recover data from bad diskettes! XCOPY provides multi-file copies, 'wild-card' mask select, absolute sector mode and other features. SUPERZAP allows examine/change any sector on diskette including track-0, and absolute disk backup/copy with I/O recovery. DCS builds consolidated directories from multiple diskettes into a single display or listing sorted by disk name or file name plus more. Change Disk ID with DISKID. XCREATE preallocates files and sets 'LOF' to end to speed disk accesses. DEBUGII adds single step, trace, subroutine calling, program looping, dynamic disassembly and more!!

BASIC CROSS REFERENCE UTILITY \$50.00 (Mod II 64K)

SEEK and FIND functions for Variables, Line Numbers, Strings, Keywords. 'All' options available for line numbers and variables. Load from BASIC — Call with 'CTRL'R. Output to screen or printer!

DEVELOPMENT PACKAGE \$125.00 (Mod II 64K)

Includes RACET machine language SUPERZAP, Apparatus Disassembler, and Model II interface to the Microsoft 'Editor Assembler Plus' software package including uploading services and patches for Disk I/O. Purchase price includes complete copy of Editor Assembler+ and documentation for Mod I. Assemble directly into memory, MACRO facility, save all or portions of source to disk, dynamic debug facility (ZBUG), extended editor commands.

Sound Strange? Not so.

See how this hardware mod can put your old 4K memory chips to use.

Mem Size . . . 20K!

W. R. Stanley N4TF
Rt. 13, 204 Avery Lane
LaGrange, GA 30240

When you installed a set of 16K memory chips in your computer, what did you do with the 4K set that came out?

Do you find occasions when that cure-all-memory-problem 16K set is not quite enough to contain that long program you're working on, along with an assembly language monitor and a couple of utility programs?

Let's put that extra 4K memory set to good use. Don't worry, no internal changes to the keyboard unit are necessary.

Background

Correct operation of any external circuit connected to the keyboard will depend upon appropriate address selection, your use of the data bus and the control signal you employ in an exact sequence. For example, an external memory cell location must be addressed to the exclusion of all other cell locations in that memory, if it is to share in data transfers to and from the keyboard.

The parallel eight-bit data bus at the keyboard connector is an extension of the data bus routed inside the keyboard to several discrete memory blocks (ROM, RAM, video memory, and the keyboard itself). The external memory circuit to be added to the computer must be brought onto the data bus only when data are to be written to or read from that memory block.

Address and control signals from the keyboard insure that this external memory block is enabled only when called upon by the CPU. At all other times the external memory block must appear transparent (non-existent) to the main computer.

The 4K dynamic chip as used in the TRS-80 is packaged in the standard 16-pin DIP package. One pin serves as the data input point, while a second one is used for data bit output.

Three pins are used for power inputs (+12, +5, -5 V). An additional pin is grounded for signal and power path returns. One further pin is used for a Chip Select control signal to activate the memory chip for a read or write operation.

Still another pin receives a control signal telling the chip whether the current operation is a read or a write.

So far, eight of the 16 pins have been accounted for, leaving

eight more. Yet we must apply 12 bits of addressing information to the chip designating the exact memory cell locations to be affected by the chosen operation.

Why 12?

Consider the number of address line bits necessary to address each of the 4096 memory cell locations on the chip (from 0000 to 0FFF hex). Two raised to the 12th power equals 4096.

The Memory Matrix

The 16-pin memory chip addresses its memory as a matrix, in rows and columns. Picture a grid of 64 horizontal wires overlaid by 64 vertical wires (64 x 64 = 4096). Any intersecting point in the grid can be located by specifying the row number and column number.

The memory chip is addressed by applying data that designates the row number of the desired memory bit location, latching that row address into the chip logic and control circuits, and then latching the column address presented a short time later. This address method (called multiplexing) can address any location on the 4K chip using only six address pins instead of 12.

Two additional pins on the chip are used for signal inputs to tell the chip's internal circuits

whether a row-address group or a column-address group is being entered. All 16 pins are now accounted for.

Consider one more function. The value of a given data bit stored at a particular address on the dynamic memory chip is represented by the charge level (high or low) of a capacitor at that memory matrix location.

As you know, the level of charge on a practical capacitor changes over time. This charge must be restored periodically at each capacitor cell location. This is known as the refresh operation. In the TRS-80, the Z-80 CPU performs refresh operations at the same time it decodes a machine instruction. A special register on the CPU chip keeps track of the row address groups and insures that all memory matrix row addresses are accessed in the proper order. Regardless of the amount of dynamic memory on line, all cells will be refreshed approximately 500 times per second.

Block Diagram

Fig. 1 is a block diagram of a 4K dynamic memory card that can be directly connected to the keyboard. Its address decoder is the principal circuit that determines when external memory is brought on line.

Since all locations in a 4K

memory block can be addressed using 12 address lines (A_0-A_{11}), and an additional four address line bits ($A_{12}-A_{15}$) are available, those four bits can be used to arbitrarily assign an address block location to the external memory board.

The logical place to locate the additional memory block is in the range of 8000-8FFF hex. This places the external memory immediately above the internal 16K block, whose highest address is 7FFF hex, without leaving a gap.

The address decoder constantly monitors the four highest-order address line bits. It outputs an enabling signal only when the computer address bus contains addresses in the 8xxx hex range (when A_{15} is high, and A_{12} through A_{14} are low).

If the address decoder circuit senses any other combination of signals on the address bus, it disconnects the remainder of the memory board circuits.

The address multiplexer (Fig. 1) performs as an electronic six-

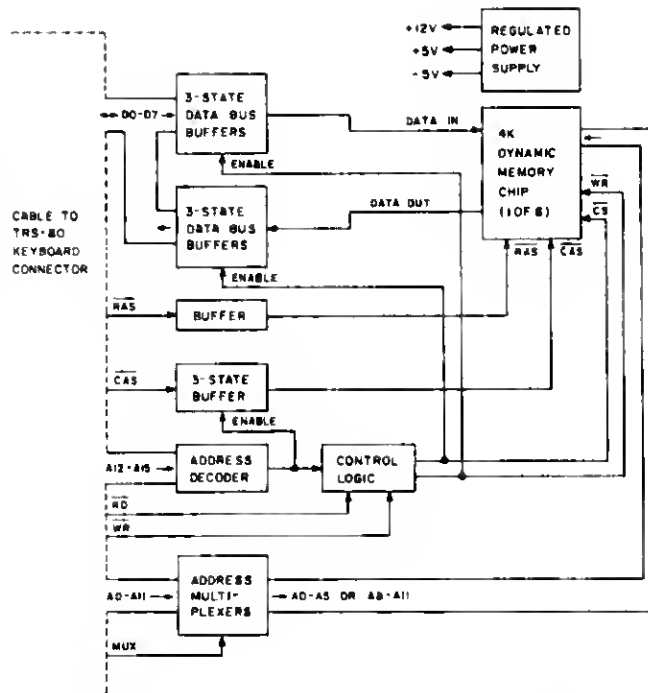

Fig. 1. Block Diagram of the 4K Dynamic Memory Board

pole double-throw switch. In one position of the switch, address lines A_0-A_5 connect to the memory chips. In the other position,

lines A_6-A_{11} are routed to the chips. The MUX (Multiplexer) signal, which is the output of a flip-flop in the keyboard, deter-

mines the electrical position of the double-throw switch.

The MUX signal has a predetermined phase relationship to the RAS (Row Address Strobe Not) and CAS (Column Address Strobe Not) signals also generated inside the keyboard. When the RAS signal is present, either during the early part of a memory read or write cycle, or during a refresh operation, the phase of the MUX signal is such that the address multiplexer outputs the low-order address group (A_0-A_5) to the memory chips.

When the CAS signal is present, the MUX signal phase is reversed, and the multiplexer outputs the high-order address group (A_6-A_{11}) to the chips.

Note that the RAS signal is applied through a buffer to memory. Buffering this signal causes the keyboard circuit that provides that signal to see only one additional load rather than eight more.

Note also that the CAS signal is applied through a three-state buffer. This buffer is operational

NOW AVAILABLE FROM THE AUTHOR OF **RADEX-10***

ALL THE MODULES YOU HAVE BEEN WAITING FOR AND MORE "THE UNIVERSAL DATABASE MANAGER (UDBM)"

CUSTOM APPLICATION SOFTWARE announces the first complete database management system for the TRS-80® Radio Shack computer. The UDBM is complete with operators manual and is sold only under license agreement with the author, Ronald L. Lucia. The add on modules are available only to those persons who have a authorized (not bootleg) copy of RADEX-10, or the UDBM and NEWDOS by APPARAT.

THE UNIVERSAL DATABASE MANAGER

MENU	MODEL I	MODEL II
1. CREATE A DATABASE		
2. MAINTAIN A DATABASE		
3. CREATE A REPORT		
4. RUN A REPORT		
5. PRINT FILE PARAMETERS (1-5)	\$99.95	\$149.95
6. CREATE OR RUN SORT REPORTS	\$99.95	\$149.95
7. SORT DATABASE	\$99.95	soon/available
8. RESTRUCTURE DATABASE	\$99.95	soon/available
9. INDEX KEYS (soon available)	\$99.95	soon/available
10. INVOKE AUTO COPY		
11. END PROGRAM		

- 1-5. The UNIVERSAL DATABASE MANAGER (UDBM) and its four add on modules are compatible with any file created with RADEX-10
6. The SORT REPORT MODULE gives you the ability to create reports which sort the records of any RADEX-10 or UDBM file by any KEY and any SUB KEY and print them on the report.
7. The SORT DATABASE MODULE gives you the ability to sort the records of any RADEX-10 or UDBM file and write those records onto a new file or append those records to an existing file with the same file structure as the source file. (Both the SORT REPORT and SORT DATABASE modules use the 48K INFINITE BASIC machine language sort of RACET COMPUTES.)
8. The RESTRUCTURE DATABASE MODULE gives you the ability to read the records of any RADEX-10 or UDBM file and then write those records onto another file with a different file structure, thus allowing you to ADD, DELETE, or CHANGE FIELDS of a database file without having to re-key-in the data.

California residents add 6% sales tax

The solution to your hardware dilemma:

You could spend a lot of money for TRS-80® peripherals — OR — spend a lot of time developing your own — BUT here's a better choice. The UIB® parallel input port costs little more than you would pay for parts alone AND lets you focus your design time on applications.

Hook up sensors, switches, joysticks, lightpens, keyboards without modifying the computer or tying up the cassette port. Plugs into card edge at back of keyboard.

Features 8 bit, TTL/CMOS compatible input. Jumper address programming. Can be powered by inexpensive AC adapter available from Radio Shack and elsewhere.

Includes all IC's, sockets, resistors, capacitors, voltage regulator, jack instructions/documentation, etc., plus free joystick plans. As you would expect of a good solution, all parts are guaranteed. For LIL

Kit (one evening) \$35.00 ppd
Assembled & tested \$45.00 ppd

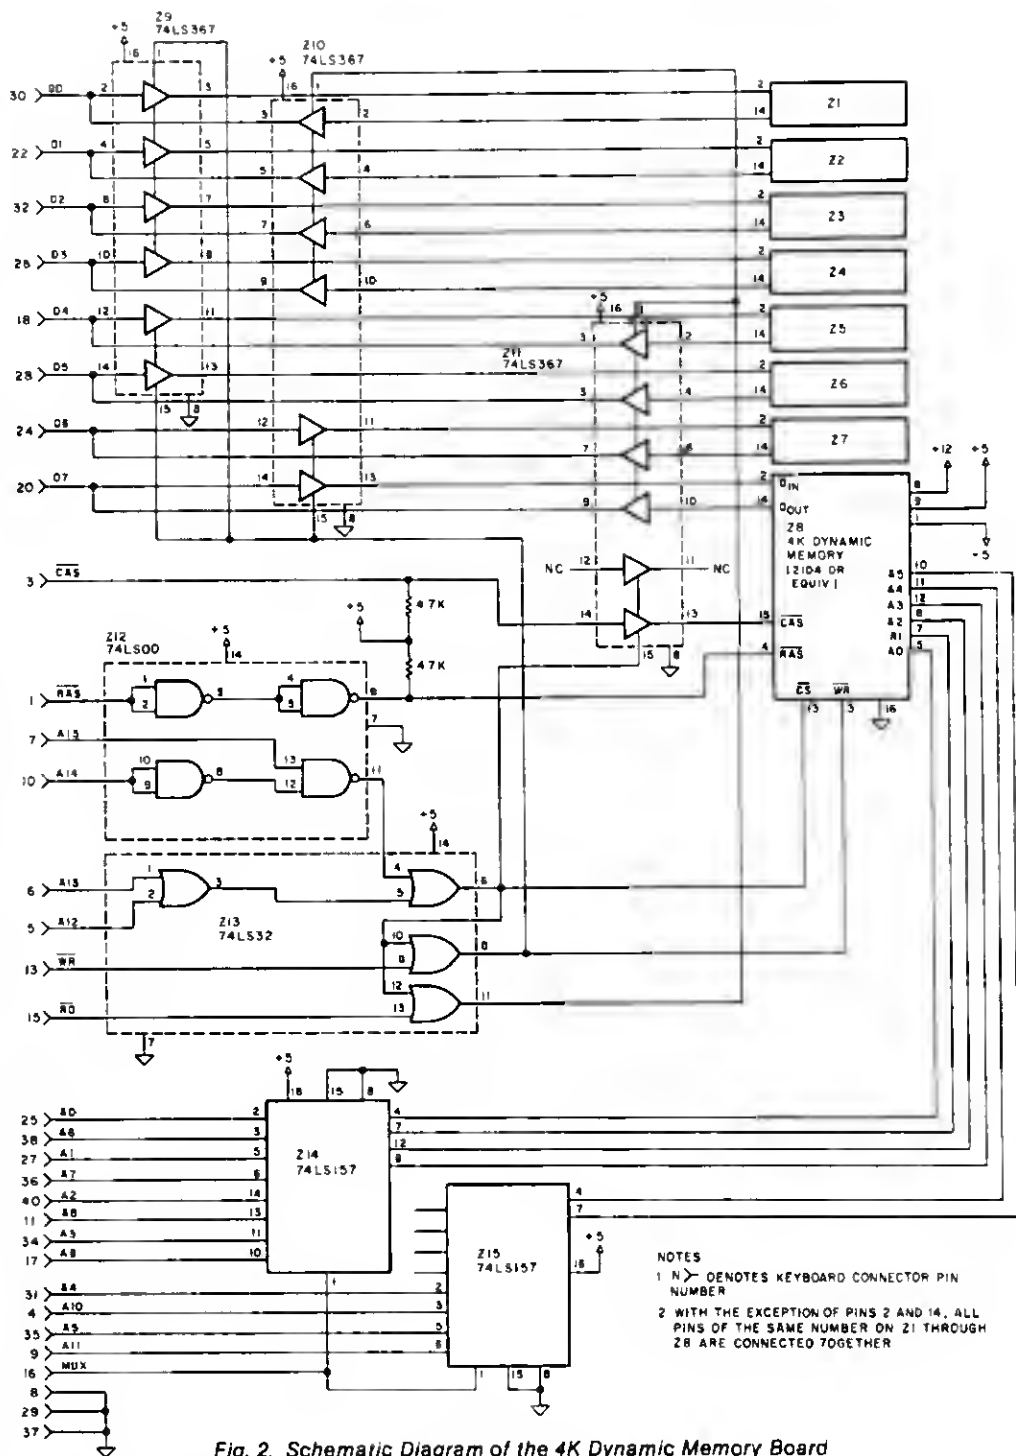

Fig. 2. Schematic Diagram of the 4K Dynamic Memory Board

only when the address decoder senses addresses in the 8xxx hex range. The $\overline{\text{CAS}}$ signal is therefore applied to the external memory chips only when those chips are written to or read from.

Two additional control signals from the keyboard connector tell the external memory whether it is being written to or read from. These signals are, respectively, $\overline{\text{WR}}$ (Write Not) and $\overline{\text{RD}}$ (Read Not).

Note that these signals are al-

so combined with the address decoder output so that the memory chips are not placed in the read or write condition unless the proper address range is on the computer address bus.

The $\overline{\text{CS}}$ (Chip Select Not) signal is present when the $\overline{\text{RD}}$ signal and the proper address decoder output appear in the same time frame.

Construction

The schematic diagram of the

4K memory board is shown in Fig. 2. The layout is not critical; however, I suggest that you spend a little time trying different component arrangements before you start wiring.

I constructed my circuit on a Radio Shack Cat. #276-152 Plug-In Breadboard. This card provides ample room for construction of the memory circuit. It also has 44 pins on its board edge, which means that its pin number assignments can be directly

Announcing the most important utility ever introduced for the TRS-80* Model I and Model II—

ENHBAS™

ENHBAS is an Enhanced Basic extension module, which loads at the top of BASIC, adding many commands and background tasks—

□ Over 30 new commands added to your BASIC:

- **SORT**—Multi-keying, multi-tagging array sort. Sorts thousands of items in mere seconds, all with one command!
- **JNAME \$exp**—Use line labels along with line numbers in branching statements, as in assembly language, using the ENHBAS commands GTO and CSUB (special GOTO and GOSUB). For example:

```
10 GTO "ENTER A LINE"
20 REM LINE 10 IS THE SAME AS 'GOTO 30'
30 JNAME "ENTER A LINE" : INPUT A$
```

How many times have you wanted to use variables to reference line numbers? Now you can! GTO and CSUB allow variable expressions as operands, such as: GTO X+40 or CSUB (Y*10)+30.

- **WHILE / WEND**—New, structured programming loop construct. Makes for more logical program flow.

- **EXEC / EVAL**—Two new, extremely powerful functions! EVAL evaluates an algebraic expression in string form: A\$ = "X + 2" : Y = EVAL A\$ would result in Y being set equal to the algebraic expression X + 2. With EVAL, you can manipulate complex functions in string form, and then execute them.

EXEC executes a string expression as if it were a BASIC program line! For example:

A\$ = "PRINT X" : X = 4 : EXEC A\$ would result in a 4 printed on the screen (that is, execution of the BASIC statement "PRINT X"). With EXEC, your computer can write its own programs and execute them!

- **CALL**—Pass control to machine language sub-routines at any address, passing parameters both ways.
- **CLM / PAGE**—Set up automatic page roll-over and other line printer functions from BASIC.
- **All these and many more!**

□ In addition to the above commands, Model I ENHBAS contains vector graphics and drawing commands. Model II ENHBAS has many functions suited to business programming—ISAM file handling commands, RS-232 access, and many more; along with several Model I BASIC commands left out of Model II (PEEK, POKE, etc.).

□ ENHBAS includes many background utilities:

- **User-select cursor**
- **Key click**
- **2-tone beep on error**
- **Automatic lower-case**
- **Automatic debounce**
- **Short-entry commands (Shift-letter)**
- **Real Control keys**
- **One-letter commands**
- **Formatted LISTing**

ENHBAS is available for:

16K Model I—Level-II Tape.....	\$39.95
32K Model I Disk	\$39.95
32K Model II	\$99.95

Other software:

CSG PILOT—Disk-based, high level language. Fast!
32K Model I Disk..... \$59.95

Z-EMULATOR—Executes assembly language program lines.
16K Model I—Level-II Tape / 32K Model I Disk ... \$29.95

ENHCOMP—Integer subset BASIC compiler. Full graphics and unlimited length variables. Written in machine-language—fast!
32K Model I Disk..... \$24.95

ABBREV—Level-I abbreviations in Level-II/Disk BASIC.
16K Model I—Level-II Tape / 16K Model I Disk ... \$24.95

correlated with those of the keyboard connector, and still have four uncommitted pins available for connecting the card to an external power supply.

The mating connector is also available at Radio Shack. The proper mating connector for the keyboard is an AMP P/N 88103-1 or its equivalent. You can get a 40-pin connector with 0.1-inch contact spacing at Priority One Electronics. Consult the advertisements in this and other periodicals for alternate sources.

Note that the pin number assignments on the keyboard connector do not necessarily agree with the order indicated on your mating 40-pin connector. With the keyboard in front of you, pin 1 will be on the top of the circuit board at the connector and farthest removed from the RESET button. The odd-numbered pins progress in ascending order to the left, with pin 39 on the top left edge. All even-numbered pins are on the underside of the keyboard connector, with pin 2 directly underneath pin 1.

Pin 40 is closest to the RESET button.

Be sure to label the connector that plugs into the keyboard so that its position is correct before insertion. Use dots of fingernail polish or some other marking medium to indicate proper orientation between the memory card and its mating

for all ICs. They are good insurance against heat and static damage for the memory chips. They make troubleshooting and replacing components much easier. Incidentally, either solder or wire-wrap techniques can be used. The more ambitious constructor might consider fabricating a printed-circuit board.

"Note that the pin number assignments on the keyboard connector do not necessarily agree with the order indicated on your mating 40-pin connector."

connector. If either cable connection is reversed, you might damage your system.

You can use either ribbon cable or individual stranded wires to join the two connectors. I suggest a maximum length of one foot for either type.

I urge you to employ sockets

Make all necessary power and ground connections to all chip sockets. Next, connect all indicated like-numbered pins in parallel on the eight memory IC sockets. Make all connections between the memory chip sockets and the remainder of the components on the board.

Following this, wire the address decoder and logic circuits. The last area to be wired is between the card edge pins and the appropriate ICs.

Work slowly, and take a break now and then. Double-check your wiring. Unless printed-circuit techniques are used, you will end up with several layers of wires placed on top of each other. It becomes difficult to find and correct a wiring error that is buried.

If you arrange the memory sockets in parallel rows on the card, cross-connect the power buses between adjacent chips if possible. This method will lower the impedances of the power distribution leads.

Power supply pins should be bypassed, especially around memory ICs. A 0.1- μ F disk capacitor bypassing the +12-V supply pin at every other chip and a 0.1- μ F disk at the +5-V pin on alternate memory chip sockets are recommended.

A 0.01- μ F disk located at the -5-V supply pin on every other

ANTS!!! A STIMULATING ACTION GAME \$14.95
Two colonies of ants are at war. Opposing queen ants produce four types of offspring: workers, soldiers, guards, and drones. The challenging strategy is to produce ants in the proper sequence to sting the enemy queen or overrun its nest.
SPECIAL FEATURES: Full screen action with SOUND. Hundreds of ants battle with machine language speed. 3 game variations. Play another person or the computer opponent at 4 difficulty levels.
EASY TO PLAY, CHALLENGING TO MASTER!

PARSECTOR V THE ULTIMATE SPACE WAR \$19.95
Two opponents must navigate powerful mother ships through the galaxy and capture parsectors. Launch fleet battle craft: flyers, cruisers, and bases. Fire high powered energy beams or deadly short range weapon spreads. To win you must conquer the galaxy or destroy your opponent's mother ship.
SPECIAL FEATURES: Unique split screen gives each player a private video display. Action Sounds and Graphics: explosions, weapon releases, launchers, and more. Variable galaxy size. Play another person or the computer opponent at 3 difficulty levels.
LAUNCH A COMPLETE SPACE FORCE IN MINUTES!

WITH SOUND

HIGH SPEED LIFE THE FASTEST \$9.95
John H. Conway's famous game comes to life with full animation. The fastest, most advanced version. Many patterns average over 500 generations per minute. **SPECIAL FEATURES:** Full screen 480x640 matrix. 32 preprogrammed patterns. Special pattern generators. Create, edit, & save your patterns on data tape. Sound. Single key functions: erase, save, single step, delay, scroll eight ways.
SPEEDS UP TO 2000 GENERATIONS PER MINUTE!

NAME THAT STATE QUIZ EDUCATIONAL \$14.95
A fascinating way to learn about our 50 states. It teaches the state shapes, names, capitals, populations, areas, and geographic regions. Three types of quizzes: true & false, multiple choice, and fill in the blank. **SPECIAL FEATURES:** Action Sounds, rewarding tones and pleasant buzzers. Continuous score. Easy to use.

memory socket is also advisable. Several 0.01 to 0.1- μ F disk capacitors located at the +5-V supply pins on several of the remaining IC sockets would help maintain smooth operation.

One reason for paying particular attention to supply pin bypassing around the memory chips is that high peak currents occur during certain portions of the memory IC operating cycle. Although the average current at each IC is not excessive, those sudden high-current demands could not be met by power supplies located several feet away.

One solution to these abrupt current increases is to connect large capacitors in the immediate vicinity of the memory chips.

The memory board doesn't require much power. But you will find that it costs only a little more to build a power supply that will operate with other circuits. In other words, overbuild the power supply, unless you are interested in the smallest possible package.

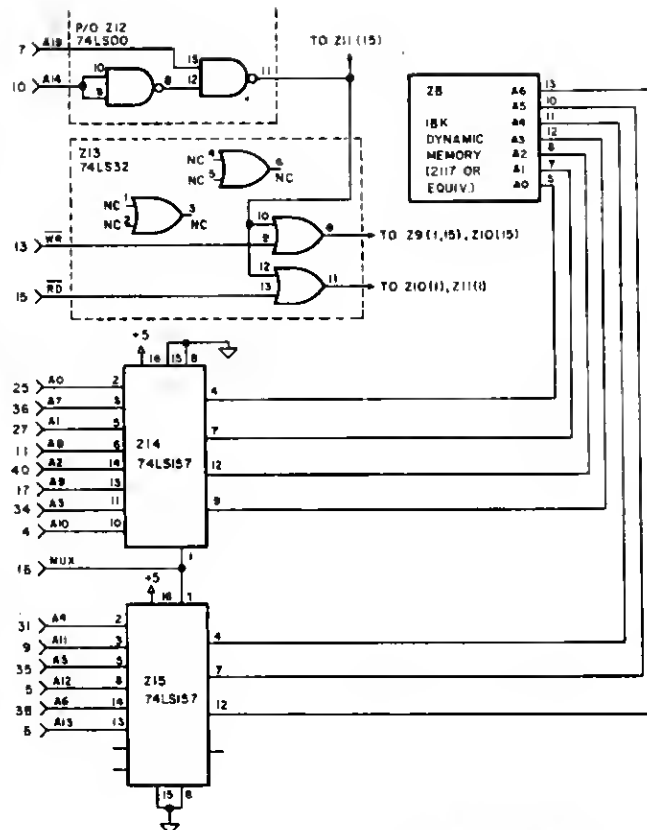

Fig. 3. Partial Schematic Diagram of the 16K Dynamic Memory Board

Junk-box Transformer

I used a junk-box transformer with two low-voltage center-tapped secondaries. The wires between the windings and the terminals on the transformer appeared to be about the right size to handle at least one amp each.

A bridge rectifier across one winding, with the center-tap left disconnected, feeds a 7812 regulator. Both input and output of this regulator chip are heavily bypassed with electrolytics.

In addition, I placed a 0.1 μ F disk at both of its active terminals, very close to the package.

A full-wave rectifier is connected across the other secondary winding, whose center-tap is grounded. This rectifier feeds a 7805 regulator, whose input and output are also heavily bypassed.

Another full-wave rectifier, with the diodes reversed from those for the +5-V supply, is connected to another regulator-filter combination. Here a 7905 negative voltage regulator is

SMALL SOFTWARE SYSTEM

PRODUCTS FOR THE TRS-80

SMALL SOFTWARE SYSTEM

NEW!

WHISTLER: HOME CONTROLLER INTERFACE - \$34.95. New hardware product that controls lights, appliances, computer peripherals, darkroom timers and other 115 volt devices anywhere in your house! Software controlled by cassette cable. Use with Sears or BSR Home Control System with ultrasonic option. Assembled, tested, self-contained, and includes Basic software.

TRS-80 DISK & OTHER MYSTERIES - \$22.95. H.C. Pennington. Best disk book we've seen! Directory secrets, file formats, damaged disk recovery, etc.

LEARNING LEVEL II - \$15.95. G.A. Lien. Learn Level-2 like you did Level-1, step by step. Same author and style as Level-1 manual. Super new book!

UTILITIES

RSR-2: MACHINE LANGUAGE MONITOR FOR 16K TRS-80'S - \$26.95

RSR-2D: THREE VERSIONS OF RSR-2 FOR DISK SYSTEMS - \$9.95

RSR-2 RELDEATOR: PUT RSR-2/D ANYWHERE IN MEMORY - \$9.95

Machine Language monitors with Z-80 disassembler! HEX and ASCII memory dumps; EDIT, MOVE, EXCHANGE, VERIFY, FILL, ZERO, TEST, or SEARCH memory; read/write SYSTEM tapes; enter BREAKPOINTS, PRINT with TRS232 or Centronics; read/write disk sectors directly! RSR-2 tape loads at top of 16K LEVEL 1 or 11; RSR-2D disk includes 3 versions for 16K, 32K and 48K.

DCV-1: CONVERT SYSTEM PROGRAMS TO DISK FILES - \$9.95. Execute Adventure, Air Raid, RSL-1, ESP-1, T-BUG, etc. from disk, even if they interfere with TRS80S! New version works with TRS80S 2.3.

BASIC-1P: LEVEL-1 BASIC WITH PRINTING! - \$19.95. Run any LEVEL-1 BASIC program on your 16K Level-2. PLUS LPRINT and LLIST with our TRS232 or Centronics. Furnished on tape; can be used from disk.

MACHINE LANGUAGE GAMES

AIR RAID, BARRICADE or REL-1: - \$10.00 each, all 3 for \$25.00

AIR RAID: A super shooting gallery; our most popular game. Ground based missile launcher shoots high speed aircraft! Hours of fun!

BARRICADE: "BREAKOUT" for the TRS-80! Break through 5 walls with high-speed ball and keyboard controlled paddle! 96 different options!

RSL-1: Enter patterns with repeating keyboard! Save patterns on tape (4 furnished). Play John Conway's LIFE. FAST - about 1 second per generation!

MODEL-II TRS-80

CP/M™ VERSION 2.0 FOR THE MODEL-II - \$170.00. Latest version from Digital Research. Runs both single and double density disks! "Standard" version runs nearly any CP/M software, including Cobol, Fortran, C-Basic, M-Basic, business and accounting packages, etc. Hundreds of programs available!

RSMII: ENHANCED RSM MONITOR FOR THE MODEL-II - \$39.95. Relocatable version of RSM-2D plus screen editor for modifying either memory or disk sectors in both Hex and ASCII, split screen scrolling, and formatted serial or parallel printing. Sold on self-booting disk; directions to save as TRS80S file.

PROFESSIONAL SOFTWARE

THE ELECTRIC PENCIL FOR THE TRS-80: TAPE-\$99.95, DISK-\$150.00. Popular video editor for creating and saving text files. Prints formatted copy with right justification, page titling & numbering, etc. Upper case only, or lower case with modification. 16K Level-1 or 2 (tape).

CP/M™ OPERATING SYSTEM FOR THE MODEL-I - \$145.00. The 8080/8085 "Software Bus" for the Model-1 TRS-80. Includes TRS232 and RS-232-C software, lower-case support, debounce, DCV-2 and other unique utilities. Allows use of many available programs written for CP/M.

PRINTER SUPPORT

TRS232 PRINTER INTERFACE - \$49.95 (\$59.95 after June 30). Assembled & tested printer interface for RS232 or 20-wire current loop printers. Expansion interface not required. Print from Level-II BASIC, CP/M, BASIC-1P, ELECTRIC PENCIL, etc. Standard cassette software included. Add \$2.00 for shipping.

TRS232 "FORMATTER" SOFTWARE PACKAGE - \$14.95. Adds page and line length control, printer pause, "smart" line termination, etc. to TRS232.

RSR232: Adds RS-232-C capability to RSR-2/D monitors - \$9.95

PEN232: RS-232-C for cassette version Electric Pencil - 9.95

ERY232: TRS232 and RS-232-C for tape version of EDTASM - 9.95

OTHER PRODUCTS FOR THE TRS-80

ESP-1: \$29.95. Assembler, Editor, Monitor (8080 mnemonics)

LST-1: \$8.00. Listing of Level-1 BASIC with some comments

SMALL SYSTEM SOFTWARE P.O. BOX 366 NEWBURY PARK, CA 91320

SMALL SYSTEM SOFTWARE P.O. BOX 366 NEWBURY PARK, CA 91320

used. Many parts suppliers stock the equivalent of the 7905, listing it as the LM320K-5.

(A 5-V zener diode, bypass capacitor and series dropping resistor can be used in lieu of the 7905 (or equivalent), and you would find that the total cost is about the same. However, this zener regulator does not provide the thermal and overload current protection of the regulator package.)

Mount the 7812 and 7805 on separate small heat sinks, or attach suitable radiators to them. Both of these chips get rather warm. The 7905 does not require heat-sinking because its load current is much lower.

16K Memory Board

You can modify the 4K memory board making it plug compatible to that new set of 16K chips. You need change only the address decoder and address multiplexer circuits to operate the added 16K set in the address range from 8xxx to Bxxx hex (Fig. 3).

Compare the schematics in Figs. 2 and 3. Seven address lines are connected to the 16K chips. (Only six lines went to the 4K set). This means that a total of 14 addressing bits are applied to the 16K chips, in two groups of seven.

The row and column matrix in

the 16K chip is a 128 by 128 grid; therefore, seven bits per multiplexed group are necessary.

Adding one address bit per group means that two additional address lines must be added to the multiplexer. This is shown in Fig. 3.

Recall that all 16 pins on the 4K chip are used. What else has to be changed when the seventh address line is added to the 16K chip?

is accessed only when A_{15} is high, and A_{14} through A_{10} are low. This represents an address within the 8xxx hex range. The 16K board is addressed in the 8xxx-Bxxx hex range. This particular range of addresses is present any time A_{15} is high and A_{14} is low.

The address decoder on the 16K board, therefore, has to monitor only two address lines, rather than four.

"Recall that all 16 pins of the 4K chip are used. What else has to be changed when the seventh address line is added to the 16K chip?"

The 4K chip has a \overline{CS} pin which enables the chip. Note that the 16K chip has no such pin designation. The manufacturer designed the 16K chip so that it is fully functional when the \overline{RAS} , \overline{CAS} and addressing signals are present at the correct times.

Look at the address decoder circuits on the two schematics. The decoder for the 16K memory circuit is simpler, because it responds to a wider range of addresses than the one for the 4K board.

Remember that the 4K board

When you substitute that set of 16K chips in the keyboard for the original 4K set, you have to reconfigure several jumpers. You are actually rearranging the address decoder output to respond to a wider range of dynamic memory addresses. You also change the \overline{CS} signal line going to the 4K set to an additional multiplexed address line going to the 16K set.

It makes sense now, doesn't it?

Closing Comments

We'll, there you have it. I have

tried to present enough background information to enable you to substitute parts or rearrange logic and control circuits. There is always room for improvement on someone's ideas or techniques, and this construction article is no exception.

You will find many instances when the external memory is unnecessary. Instead of wearing out the keyboard connector merely turn off the power supplies feeding the board.

One word of caution in this area: If you initialize the computer with the external memory energized and, later, remove power to the external circuit, the computer will, in some instances, use the external memory as if it were still available. The result is incorrect operation and/or lost data.

A good way of reserving a block of upper memory for machine-language programs is to power on while the external memory is still off. After the computer is initialized, turn on the external memory power supplies.

The computer won't find the added memory, unless it gets trapped in a loop that asks you the MEMORY SIZE question (Level II).

If you have any questions, I'll be happy to respond but include a SASE. ■

WHAT IS "THE PATCH"?

We asked ourselves: WHY should our computer be as bland as everybody else's? Why not unlock the unused and wasted abilities available within each and every TRS-80 Model I. These abilities allow the display to be dressed up and the computer to be effectively easier to use.

Now we have developed the means for getting the most from our computers and we know you need it too. With "THE PATCH", a new age of simplicity and convenience has arrived. You don't want to be left out, so don't kid yourself, you need the enhancements which "THE PATCH" provides.

• Does your keyboard bounce?
Some say, "I have a software fix for that!"

• Does your display still have that standard, dull, underline cursor?

Some brag, "We have a program which will give you a block cursor, and it even blinks!"

• Does your Dualcase printer make you look foolish when you tell it to print lowercase because you could only see UPPERcase on the display?

Most cry, "We have a kit you can install . . . and a program to run it!!!"

• Don't you have better uses for protected memory than to waste it on programs which are TOTALLY UNNECESSARY?

You sob, "I need all those advantages but they are just too much trouble to have all at once so I'll make do with what I have."

FORGET ALL THAT . . . make your life easier

What we are trying to tell you is:

1. You CAN have Keyboard debounce if you need it!
2. You CAN have Block cursor with NO distracting blinking!
3. You CAN have FULL TIME Dualcase display!
4. You CAN have typewriter style keyboard operation!
5. You CAN have faster cassette data files, up to four and one-half times faster!
6. You CAN have even more features as we make them available.

All this from THE INSTANT you power up your computer, without making your other programs unusable because some unnecessary driver program is eating that memory.

"THE PATCH" is not a ROM. "THE PATCH" is not a PROM. "THE PATCH" is a microprocessor which modifies the Level II ROM to repair changes made by TANDY when they designed your computer. This state-of-the-art technology makes these changes possible without using ANY of your computer's memory. That means, any program you use on your computer now, will still work after you install "THE PATCH", including word processors.

"THE PATCH" fits easily into the Level II ROM sockets inside your computer, no cables or switches to install.

Sound too good to be true?? Call us. Tell us your innermost fears. Let us answer your questions. Do not cheat yourself out of using ALL of your computer's abilities ALL of the time.

Put BASIC in the Palm of Your Hand

The TRS-80 Pocket Computer made by Sharp, Inc. has a liquid crystal display that shows 24 characters of an 80-character line.

TRS-80 Pocket Computer
Tandy Radio Shack
Ft. Worth, TX
\$249
Cassette Interface \$49.00

Ken Knecht
1340 W. 3rd Street #130
Yuma, AZ 85364

I was one of the first to buy the HP-35, the MITS Altair, the TRS-80, etc., so naturally here I am with an early TRS-80 Pocket Computer.

The computer can be operated as a calculator or programmed in BASIC.

Its manual doesn't give much technical information, and though it's rather slow, it's fast enough to be a useful little computer. Incidentally, it's battery powered by mercury cells. No charger. Tandy claims 300 hours on a set of batteries.

Variables for Storage

In addition to standard calculations, you can use variables for storage. This means you don't have to remember what memory number you stashed something in. You have about 200 memories available. As an example, you can enter

A=5, B=6, A+5-7AB+ SIN(30)COS(45)< ENTER>

The answer is 1055.707107. Incidentally, you enter that formula from the keyboard and type SIN, COS, etc.

You don't have labeled keys for most of the functions as on a regular calculator. It is also possible to recall the formula and make a change in it, either before or after you get an answer. Its editor is primitive, but allows you to insert or delete.

Trig functions work in degrees, radians or grads. Just type the mode you want. Degrees can be in decimal or degrees, minutes and seconds.

One small problem, I noted, was that a radical sign is used for square root but the computer does not recognize a leading digit. For example, $3\sqrt{8}$ will not give you the cube root of 8. You must instead use $8^{1/3}$. This gives the correct result.

The computer uses floating point from E-99 to E99. It displays 10 digits plus the exponent. The liquid crystal display shows 24 characters, but the line can be 80 characters long (including the <ENTER> at the end of the line). You can view any part of a line over 24 characters long at the touch of a key.

The calculator mode allows the four arithmetic operations, power calculations, trigonometric and inverse trigonometric functions, logarithmic and exponential functions, angular conversion (degrees, radians, grads), extraction of the square root, SGN(), ABS(), INT() and logical calculations.

A nice feature is that 18 of the keys can be used to hold functions such as SIN, COS, etc., or even a whole small program or a formula. You are limited to a total of 48 steps. As an example

A:1/(2*FC)

This would let you input

F=3200,C=001,<SHIFT>A<ENTER>

The answer is 2.230155145E-01. The formula uses ten of the 48 steps you have available. The : following the A does not take a step. Words like SIN, COS, etc., only use one step.

These reserved keys can be used in the calculator mode or when running BASIC. The machine retains all memory when it is turned off so these reserve key definitions are held until you change or delete them. Tandy provides two clear plastic overlays so you can label your reserved keys.

The 48 steps of memory are not included in your available RAM, so you don't waste any memory if you use this feature.

Programmable

The computer is also programmable in a subset of BASIC. The following instructions are much like those used in Level II BASIC.

INPUT	PRINT	PRINT USING
GOTO	GOSUB	RETURN
FOR	NEXT	IF
THEN	STOP	END
CLEAR	REM	ATN
SIN	COS	TAN
INT	SGN	ABS

Here are some added instructions.

PAUSE	BEEP	DEGREE
RADIAN	GRAD	AREAO
ASN	ACS	LOG
LN	OMS	OEG
EXP		

Some of the commands in the Level II-like group are a bit different. In most cases they are more flexible than Level II equivalents. For example, you can use variables with a number of the instructions that do not allow this in Level II. Permitting you to GOTO or GOSUB to an expression gives you the equivalent of ON...GOTO and ON...GOSUB. See the sample program for examples.

The CLEAR statement clears all data memory, but you can't reserve string space with it. PRINT USING is rather limited. You use & for AND and + for OR in logic expressions.

Here's a quick rundown of the added instructions.

PAUSE: Like PRINT but only displays the

line for about ¼ of a second.

BEEP: Causes machine to emit a beep sound.

DEGREE: Forces units of an angle input or result to degrees. Used with trig functions.

RADIAN: See DEGREE.

GRAD: See DEGREE.

AREAD: Automatically stores the value of an expression that has been displayed before the program is started.

ASN: Inverse of SIN (ARCSIN).

ACS: Inverse of COS (ARCCOS).

LOG: Common log (base 10).

LN: Naturel log (base e).

DMS: Converts decimal degrees to degrees, minutes, seconds.

DEG: Converts degrees, minutes, seconds to decimal degrees.

Now to the direct commands. These are much like Level II BASIC.

RUN	LIST	NEW
CONT	MEM	DEBUG

DEBUG lets you single step through a BASIC program line by line. You can see the line and examine the variables at any time. I wish the TRS-80 Model I had this command! It is extremely useful.

You may have noticed that there weren't any string manipulation instructions in the

lists. Unfortunately, that's because there aren't any. You can use string variables, but they will only hold seven characters each. However, to a limited extent, you can concatenate strings.

You can use arrays, both numerical and string, but only with one variable name, A or A\$.

Variables' names can consist of only one letter, so you have 26 variables. You cannot use the same letter for a string and numerical variable. Thus when you assign 100 to A, if you put "NAME" in A\$, you lose the 100 in A. Also, A\$(2) or A(2) is the same memory location as would be used for B or B\$. So you are limited to 26 variables whether you store in arrays or single letter variables, numbers or strings. But all is not lost, read on.

Array Memories

However, you may or may not have another 178 array memories; A(27) or A\$(27) to A(204) or A\$(204). You share these locations with the program so the number of these additional array memories depends on the program length. You can see how many array memories are available by using the MEM command.

With careful memory management you can put a pretty big program with lots of data in this little computer. With no program loaded you have room for 178 memories (1424 steps). This does not include the

26 variable memories and 48 steps of reserved memory. As an example, with the sample program loaded there are 77 memories (621 steps) left.

The sample program will calculate the day of the week for any date between the years 1800 and 2000. I don't guarantee its accuracy, but it worked for the dates I tried. It could be streamlined quite a bit by changing the logic of the valid date test routines and using multiple statements on a line. This is just a quick BASIC program to illustrate the Pocket Computer.

The computer operates in four modes. The modes are switched with a single key which steps through them. The present mode is always visible on the display.

The RUN mode is used when running a BASIC program or when using the machine as a calculator.

The PRO (PROGRAM) mode is used to enter, LIST, or edit a BASIC program.

The RESERVE mode is used to program the reserve keys.

The final mode, DEF (DEFINE), will take some explaining. You can put a group of programs into the computer and use a label at the beginning of the first line of each program. Then, you can RUN any of the programs with RUN label. The label is any one of the 18 reserved keys. Only one letter in a label. Of course you can also use RUN line number, but a letter might be easier to remember.

FASTER THAN A SPEEDING TYPIST...

Is it safe to walk the keyboard of your TRS-80 at night? Do you look for Syntax Errors down every dark subroutine? Well, look in your mailbox—it's a bill, it's an ad, it's **CLOAD MAN!** Faster than keying in hardcopy, more fun than an accounts-receivable package, ready to run in a single load...

When mild mannered Clyde Cload (star cassette tape duplicator at the **MONTHLY CLOAD**) dons his cape, the evil Typo-Bugs cringe in terror. This mighty Man of Iron Oxide swoops down on your TRS-80 by First Class Mail every month with super, ready-to-load programs for your (and your computer's) education and enjoyment.

Join in the battle against the Finger-Cramps, Edit Modes, and Typo-Bugs. Let **CLOAD MAN** come to your computer's aid by getting a subscription to **CLOAD MAGAZINE**.

Labels

A few random comments: There is no random function in the BASIC. However, the manual gives a little formula for non-critical requirements.

You can GOTO or GOSUB to a label. This label is one or several characters in quotes at the beginning of the line.

There is no apostrophe on the keyboard. The computer shuts itself off if not used for about seven minutes. The beep tone is rather high-pitched—my ears are too far gone to hear it.

The line numbers run from 1 to 999. Most commands can be abbreviated, i.e., P. for PRINT, PA. for PAUSE, I. for INPUT, etc. At an error the cursor points to the error position in the line.

A battery powered cassette interface plugs in to the computer. The interface works fine with my old CTR-41. It should work with any similar machine. The interface uses the MIC input jack, not the AUX jack. It took me a few tries to discover this (read the instructions, dummy!).

As with Level II BASIC, CLOAD, CLOAD? and CSAVE are used. Reserved memory is saved separately from the program. You must use a file name (up to seven characters) when loading or saving programs or data files.

You also have a chain statement which will load another program (or module of a large program) under BASIC. I haven't tried

this feature yet. I think date memory is preserved, but the manual doesn't mention this.

In addition you have INPUT# and PRINT# to recall and save data files. These instructions are used much like those in Level II BASIC. Note that you won't get an error when recalling data if the data items run out

before the designated memory spaces are filled.

All in all I think the Pocket Computer is a well thought out piece of equipment. If you are at all familiar with computers, know the BASIC language and have a little imagination, you can run some fairly elaborate programs with it. ■

Sample Program Run

CP/M^{®1} - based Business Software for TRS-80^{®2} computers on the fastest Mod-II CP/M with the most features!!!

- Over 610,000 bytes/disk
- Downloading package included
- 1,200 baud operation of serial printers without data loss
- Single drive backup
- Mixed single/double density on any of 4 drives (even a 1-drive system)
- Ultra-fast disk operation
- Emulation of cursor addressing for any of several "dumb" CRTs
- Auto-LF printer support & ASCII top-of-form software (LP III)
- Supplemental document describing our implementation
- User-settable function keys

MOD-II CP/M \$250.00

MOD-I CP/M \$150.00

CBASIC2^{®3} (Mod I or II) \$110.00

The following software for Mod-II CP/M only unless otherwise stated (*-requires CBASIC2):

RM/COBOL^{®4} - Only COBOL for CP/M with alternate keys (multi-key ISAM), CRT screen handling, interactive debug, Z80 code, and the most useful Level 2 features. **Compatible with Tandy's COBOL-but runs faster!** \$495.00

PMS (Property Management System) - Interactive, menu-driven system includes full G/L, budgeting, cash journal, delinquency list, tenant activity/rent roll, complete audit trail and reports on vacancies, lost rent, and vendors \$650.00* demo disk & manual 75.00*

APH (Automated Patient History) - General-purpose question-asking, answer-printing system furnished as self-administered review-of-systems general patient history (Mod-I also) ... \$175.00*

MAGIC WAND^{®5} - Full-feature word processing, true proportional spacing, file merging, and use of full-screen editor for source programs or data \$400.00

RPA (Residential Property Analysis) - Analyzes income and expense, financing, taxes, inflation and depreciation on home, condo, or apartments over a user-selectable time. Shows payoff in terms of ROI, Cap rate, cash-on-cash. Amortization schedules and worksheet \$300.00* demo disk & manual 35.00*

RBC (Rent/Buy Comparison) - Sales or investment tool to compare renting and savings account investment vs. purchasing a particular property \$250.00* demo disk & manual 35.00*

Osborne & Assoc. CBASIC source programs (Mod-I also):

Payroll w/Cost Accounting \$250.00*

Accts. Payable/Accts. Receivable \$250.00*

General Ledger w/Cash Journal \$250.00*

O&A CBASIC Books (ea.) \$ 20.00

Verbatim^{®6} media: (Qty. 100 prices)

5 1/4" single density \$2.50 ea.

8" certified double density \$4.00 ea.

8" single density \$ 3.00 ea.

450' tape cartridges \$20.00 ea.

Keep track of repeating code sections in those expansive programs.

Cross Reference

Erik Camp
372F Nickolson Rd
Fort Sheridan, IL 60037

I think we can modify this machine language editor/assembler to do what we want, if we can change this section of code."

"What? Will our change affect any other part of the program? Well, I don't know. I'm not sure if this section is used elsewhere."

Does that sound familiar? If so, this cross-reference program will be of interest to you. It allows you to readily determine if a section of code is used by other portions of a program. It also shows what memory locations are used as data storage space for the A and HL registers.

Loading a Cross-reference

This program is written in Level II BASIC and is placed above the editor/assembler in user RAM.

First, load your machine language program using the System Command, then POKE the address into which this cross-reference program (Listing 1) is to be loaded into

memory locations 16548 and 16549.

A sample of the printout is shown in Example 1. This particular example is taken from a listing of the locations used by the registers HL and A as data storage locations in Radio Shack's Editor/Assembler.

Column one of this listing is the location address and may indicate a single byte or double byte is reserved.

You can tell if the listing is for a single or double byte just by looking at it.

Column two lists all locations examined which appear to store or load data into either the A register or the HL register pair. In the example shown, the first entry is for decimal location 14308. The next column indicates that location 14308 was addressed by code which resides at decimal location 18106.

The code at 18106 sets the cassette latch address for one cassette device. The machine

code also shows that the memory location reserved is a single byte used to store the contents of the A register.

Skipping further into the example, you'll see several locations accessed by ten or more locations in the machine code. The first such location is decimal 16424.

This location is used to store the contents of the HL register pair and therefore reserves two bytes of memory. Location 16424 is used by Radio Shack for the cassette data device control block. That is, location 16424 is the holder for the pointer which addresses the cassette software.

The Program

The first noteworthy item concerning my program is that I have set it up to handle a 70 by 20 array. That is, the program will accept 70 data or entry locations.

While the array size is ar-

bitrary, I have found, at least in regard to the Radio Shack Editor/Assembler program, that no data or entry point location is referenced more than 17 times. While there are some 130 valid entry points used for calls and jumps, memory limitations demanded that I place an arbitrary limit on the maximum array size. Line 470 of the Program Listing insures that the array size is not exceeded.

Line 240 is the entry point for my cross-reference program. The user is asked to provide the locations, as a decimal number, at which the program is to begin and end.

Next, the user is requested to define the start of the 2000 byte memory range which the program is to use as a window. This insures that needless overflows do not occur and speeds the program's operation.

The user is then asked to choose one of two available cross-reference listings. The first option builds an entry point listing for calls and jumps. Using this program option allows a person to see if a program segment is accessed from other areas.

One note of caution, however, this program does not handle relative jumps.

The second option lists the locations which the program uses as data storage locations.

Line 310 searches for code

Program Listing

This Weekend: STIK IT.... ..to your

That's right! Esmark's VIDIET-STIK light pen has the TRS-80 CONNECTION for LEVEL I & II. Your 4K to 48K TRS-80 System will come alive under your VIDIET-STIK within minutes of its arrival. That's because there are no wires to solder or traces to cut. You're up and running as fast as you can plug the interface into your system's cassette EAR-jack. CLOAD our custom LIGHT-WAVE demonstration software and RUN. And because the interface has a plug for your recorder, you won't have to unplug it again when loading your other software tapes. The interface allows them to pass right thru whenever you're not using the pen. It's exclusive "switched tip" design means the pen's electrically isolated from your system when it's not in use. Just point & press! It's that simple. Plug, CLOAD and RUN. And have we got the software for you to RUN with! Our demonstration tape includes a calibration program (used to adjust the CRT's brightness and contrast) plus STIK-TAC-TOE, AWARI and TOWERS. Two challenging games and a puzzle that will keep grownups and children Stiking it to your TRS-80 for hours. And there are instructions provided so you can begin writing your own light pen programs (lightware) for fun or profit (Level II). Dr. just sit back and enjoy our LIGHT-WAVE tapes each month. Esmark's unmatched commitment to lightware can bring you up to five new games, puzzles, drills & educational quizzes or simulations each month. Our current LIGHT-WAVE releases are

LIGHT-PAK 2 — LIGHTPEG (4 peg-jump puzzles)
ENORUN (Othello with a twist)
(LEVEL II) LIFE9 (Conway's LIFE with mutations)
Price \$19.95 (including postage & handling)
LIGHT-PAK 3 — LITEGAMMON (Backgammon you'll Stik with)
(LEVEL II) STIKWUMPUS (Caves with a little 'lite')
MAZEMASTER (Maze after maze to poke thru)
PRICE \$19.95 (including postage & handling)

Order yours now and we'll include a free copy of FLASHBACK, Esmark's newsletter dedicated to the latest news in lightware applications. And, don't forget to tell your friends. The VIDIET-STIK can also be ordered for use on most other micro systems using the following processor chips

8080	Z80	6800	6502
------	-----	------	------

All that's required is a standard cassette jack leading to Ground and a readable single bit input port. Driver software is provided along with instructions for writing lightware applications. And tell your local Dealer that Esmark's got a Dealer package he won't want to miss out on. Delivery is 3 to 6 weeks from receipt of your order. CD D's are \$3.00 extra but will be shipped within two weeks. All prices are F.O.B. Mishawaka, Indiana. Indiana residents add 4% state sales tax.

ALSO COMING FROM ESMARK:

- [] TRS-80 Printer Interface (Cassette AUX-jack interface for all RS232 printers. Includes LLIST & LPRINT software)
- [] TRS-80 RS232 Communications Interface (Makes your TRS-80 a full I/O terminal to timesharing systems the world over. Gives you intelligent or dumb terminal capabilities at 110 or 300 BAUD. Also includes Printer Interface above with 20 mA current loop & TTL level I/O options.)

— TRS-80 is a trademark of the Tandy Corporation —

*ELECTRONIC SYSTEMS MARKETING

that equals a register save to memory or a load register from memory for the A and HL registers. Lines 320 and 330 seek code that relate to jumps and calls.

When a match is found, the program proceeds to line 390 where it determines the decimal value of the two bytes following a match. Line 390 also insures that the value is within an acceptable range. This test helps to keep the array size within limits. The test also allows me to ignore those values which are obviously not correct.

Because this program's logic is relatively limited, erroneous entries can still occur. Errors may occur because ASCII tables or other constants are treated

as legal program text. Thus, line 390 ignores those entries which claim to use ROM memory (memory below 14000 decimal in the TRS-80) or program buffer memory. (Program buffer memory, for example, in the Radio Shack Editor/Assembler exists above 23803.) These limits must be set according to the requirements of the user.

Line 440 insures that the lowest value begins the array. If the array has a starting value greater than the present value, the program jumps to line 700. The code which starts at line 700 rearranges all of the array upward to make room for the newest entry.

Note that the highest value

may be lost unless line 390 is used to limit the range of values acceptable at this point.

Line 450 checks for a match within the array. If the present value matches, the memory locations are entered into the table in the next free column location. If there is no match, the program transfers to line 460 which seeks the next unused row. If the row is not empty, then the row pointer is incremented and the program loops back to line 440. This continues until the maximum size of the array (70 entries) is reached.

Lines 550 through 590 handle the output of the array to the line printer. In order to speed printing, only those array cells which

have nonzero values are printed. All other cells are ignored. The program loops back to the beginning when the information within the array has been printed out.

Conclusion

As mentioned earlier, the logic used within this program is limited. The user must therefore be aware that the information provided in the listing must be viewed critically and not automatically accepted as authoritative. Nevertheless, I have found this program to be extremely helpful in my attempts to learn more about the inner workings of Radio Shack's Editor/Assembler. ■

THE GREEN SCREEN THING

(The Green Thing is a custom design for your TRS-80. It gives a smooth, clear picture.)

Model SC-80

The Green Thing from the manufacturer of Monitor for the TRS-80 is composed of our CF-80 High Quality cassette to the normal display as seen on our CF-80 Economy cassette. (For further information or contact, see our other ad.)

CF-80 With CF-80 Without

List \$795 (Add \$100 for shipping & handling and Cash-on-delivery add a sales tax.)

FEATURES:

- Improved image contrast
- Reduces eye fatigue
- Enhances screen legibility
- Decreases glare
- Gives system a professional look

HALF A MILLION TAX RETURNS CAN'T BE WRONG!
(OR THEY HAD BETTER NOT BE)

INCOME TAX SYSTEM FOR TRS-80* MODEL I OR II

Our system, which prepared 500,000 1979 returns, features the following:

1. Full interactive user control, in tax-form language only, line-by-line.
2. Screen display of full 1040 and all schedules, prior to printout.
3. Change of a single amount item automatically changes and re-computes entire return.
4. All printout formats IRS and state approved.
5. Stores Preparer's Identification for automatic printing at bottom of page 2.
6. Built-in Validation Check tests entire system, hardware and software.
7. Special Printer Adjustment routines, Line Length, etc.
8. Selection of closed or open output formats—for standard Form 1040 or open name-box types.
9. **Software control of text position on page.** Makes forms-alignment simple. Permits use with non-adjustable printers.
10. Fills in pre-printed Forms or you can use overlays. Your choice.
11. Automatically computes: Tax - SDI Overpayment - Wages Total from W-2's - Earned Income Credit - Income Averaging - Maximum/Minimum Tax - Least Tax Method - All Percentage of Income Limitations - All Fixed Limitations - many, many more.
12. Full support through the tax season — no charge.
13. Inexpensive yearly updates in accordance with tax-law changes.
14. Modular construction — lets you order only the type and size system you need.

PRICING STARTS AT \$189.95 (1040 & SCHEDULE A)

25-PAGE DESCRIPTIVE MANUAL \$7.50 (Refunded on Order)

An efficient application for single drive, limited memory disk systems.

Your Personal Calendar

William L. Colsher
4328 Nutmeg Lane, Apt. 111
Lisle, IL 50532

When I had finally saved up enough money for a disk drive for my TRS-80, I only had 16K of RAM. Radio Shack says in the manual that you can operate TRSDOS with 16K, but when you load BASIC it turns out you've only got about 6K. That's not much for a program.

Worse, TRSDOS and its friends and relatives do a darn good job of filling up the disk sitting in that lonely drive.

Well, here is one application I found that requires only small files, a little memory, and holds just about everybody's interest—the personal calendar. This simple program automates those little notepads that everybody carries around with “what I have to do today” information on them.

Designing the Program

A calendar program is an ideal candidate for using random access file. Think about it. You never know when you might want to add a note for September 17, July 8 or February 10.

Then we'll need a separate record for each day—oops—there are 365 days in a year, and we can only have 335 random access records on an entire disk.

Fortunately, a year can be divided in other ways. Weeks are a convenient division for our purposes. Fifty-two records are easy to manage in the space

available and we won't spend a lot of time reading, writing and searching, as we would if we had one record for each month. (Actually it turns out we'll need 53 records: Seven days times 52 weeks is only 364.)

Each record holds 255 bytes. As the TRSDOS manual says, that's a lot of data. My guess is that one's average note probably won't contain more than ten words, say 50 or 60 characters. That means that it should be possible to pack four or five separate notes into each physical record.

Unfortunately, most people

do more than four or five things each week.

The solution to this last problem lies in the way random access files are handled by TRSDOS. Remember that at first the file contains 53 records, one for each week plus the extra day or two at the end of the year. When one of these records is filled up all we have to do is find the next empty space on the disk, some record between 54 and 335, save its number in the filled record and start filling this new one. (When we design the record layout, we'll leave a space for just this purpose.) If this seems confusing, a look at Fig. 1 may help clarify things.

Let's design a record for this personal calendar file. If it's unlikely that any given note will take more than 50 or 60 characters, the simplest way to design our records is to divide them into 60-byte fields (or subrecords). That leaves 15 bytes.

We'll use two bytes for the pointer to the next record and just ignore the remaining 13. This pointer will be set to zero if the record isn't full. (See Fig. 1.)

We could make even more efficient use of disk space by using variable length subrecords, but that can get tricky to program and even harder to ex-

Figure 1.

The Original "Photo point" Light Pen

ONLY \$19.95

Why pay \$30.00, \$35.00, \$62.00 for the same results??

Don't be misled by more expensive imitations!

This is the original Photo point light pen preferred and supported by some of the leading software sources like, "Quality Software"—"Instant Software"—"Level IV" products and so on.

Just imagine...

In playing backgammon, (included) when you want to move a man, you just point at where you want to move from, then point at where you want to move to, and your man moves!!! No more fumbling with keyboards—YEA!

Your Photo Point package comes complete;

- 1 Photo point light pen (of course)
- Info sheets on how to connect the pen and how to write your own programs ALL IN BASIC
- Two apertures
- AND two sensitivity settings
- A cassette tape with 4 informative programs and games
- Ready to connect to your TRS-80 System. (DOS too!)
- Does not void any Radio Shack warranties

Requirements:

- Level II basic
- And a little imagination!!

For fast real time programming it is your lowest cost peripheral at \$19.95

Announcing

NEW PEN BASIC by Steve Bjork

Steve is one of the Best Assembly Lang. programmers around, and he has come up with PEN BASIC. This low memory routine will add 10 more commands to Level II such as PENGET which searches the entire screen for the pen and returns a number between 0-1024 in about 1 sec. Plus 9 other commands. Perfect for you lightware authors and NEW light pen owners too! only \$14.95

plain.

One more problem: Since each week has one or more records, and people usually think in terms of days, there has to be some way of identifying which notes to print on any given day. This is easy enough to arrange. We'll just stick the day of the month onto the front end of each subrecord. It takes only two bytes, leaving 58 characters for the actual notes.

You can see that the design of the file dictates how the program will operate: what information is required, what routines it will need, etc. It even tells us that we will need two programs.

When you're using random-access files the computer doesn't know whether or not a given record exists. If you tell it to get record 97 it will do just that and then give you whatever happens to be at that spot on the disk. We'll have to write a program to initialize the calendar file.

Program Listing 1 is that program. It creates the file and

writes out 53 blank records with zero as the forward pointer in each one. The main program will know if a given record has anything in it, and, if it does, where to find the next record.

Human Engineering

As you look over these two programs, (especially the INIT/BAS code) you'll notice an abundance of code that does nothing but print messages. That's one aspect of something called human engineering—making programs that are easy to use, idiot-proof.

We've all seen programs that require several pages of explanation before you can even begin to use them. (Some of them (gasp!) in these very pages.)

These two programs are a beginner's attempt to write programs that are easy to use and hard to blow up.

Program Listing 2, called CALEN/BAS, handles all the actual work that has to be done. To

5129 DATA 31,28,31,30,31,30,31,31,30,31,30,31

```

Program Listing 1. Initialization.

do its job CALEN/BAS must perform several major tasks. First, it needs to figure out what week it is. BASIC INITIALIZATION handles this beginning at line 50000.

I have used the simple "divide by 4" test for leap years. Though it won't come up for some time, this will eventually cause an error. (If anyone can supply the correct leap year algorithm, I will be more than happy to incorporate it and publish the correction.)

To add new notes to a file, the program must be able to determine if the appropriate physical record is full, and if it is, find a new record and then add the notes. All this is taken care of in lines 1500 through 1710. If you are not conversant with random access techniques, this is the place to look for an example. Notice that if it is necessary to fetch an additional record, the variable WK% (ordinarily the week number) is subverted—it contains the number of the new record.

Reading and displaying the

notes for any given day is the third major function of the program. This is quite straightforward. Beginning with line 5000 the program simply opens the file and starts to read records beginning with the current week. It checks each of the four subrecords to see if the day of the month in the first two bytes matches today's date, and if so, prints out the note.

If the forward pointer in the last two bytes of the record is not zero, the program gets that record and again checks through the notes. When it has found all the notes for the current date, it closes the file and waits for a keypress to return to the main menu.

Conclusion

As you can see, it is possible to do some practical work with a single disk, 16K TRS-80. The techniques I've used apply not just to calendar keeping but to any type of low volume archival storage. For example, you might want to divide a file not by weeks but by budget classes:

SMALL BUSINESS SYSTEMS GROUP, INC.

Use your TRS-80 disk system. Run your weekly office football pool with this menu driven program. This program includes a pre-programmed 1980 NFL football schedule. Options include Monday night football, point spreads, pre-programmed NFL games or your own college selections. Program automatically computes winners. \$35.00. Including disk.

Requires 32k one disk drive, and printer. Complete Cutting bill package includes special program. Cassette Systems also available. Software computes all truss configurations with many including material costs. System currently in use by major truss manufacturer. Call or write for details.

Both programs available from:
DATA TRUSS, INC
P O Box 14542 ✓ 453
Gainesville, Florida 32604
(904) 372-1560

As your system grows, the need for additional I/O ports becomes obvious. Solve the problem with the new three port extender from S.C.P. The EXPANO-O-BOARD may be connected to the keyboard unit or E.I. A bus cable is required and may be ordered separately for \$11.95

OR SEND YOUR ORDER TO

Sterling Computer Products
36811 Lodge Drive
Sterling Heights, MI. 48077

Add \$1.50 for shipping - Mich. res. add 4% sales tax
Orders may be paid by check, money order or C.O.D.

DEALER INQUIRIES INVITED!

TPS-80 is a trademark of Tandy Corporation ✓ 201

The most portable operating system now supports FORTRAN. Pascal and/or FORTRAN modules are compiled in universal P-code, so they can run on most microprocessors, often without recompiling. Programs execute up to 10 times faster than comparable BASIC programs, and use much less memory. Ready to run on TRS-80 Model II (64K).

- Interactive operating system—dynamic overlays, disk file handling, run-time support and block I/O routines.
- Fast, one pass compilers.
- Two Editors—one screen oriented for programming and text editing, one character oriented for hard copy terminals.
- File handler to manipulate disk files.
- Macro-assembler that produces code for linking with Pascal or Fortran programs.
- Linker for link-editing of object and assembly code modules.
- Library of program modules and utilities.

- Disk formatting program to initialize diskettes in single or double density formats.
- Configuration program for serial I/O.
- Disk-set program to permit separate assignment of density and format characteristics for each disk drive.

- UCSD System Manual (400 pages).
- Beginner's Guide To UCSD Pascal.
- Pascal User Manual & Report.
- Fortran User's Manual with Fortran systems.

■ UCSD System with Pascal Compiler	\$350
■ with Pascal and Fortran Compilers	\$500
■ Fortran Compiler alone (requires Version II.0)	\$200
■ P-Code Interpreter alone (either LSI-11 or Z-80)	\$ 85
Optional Utility Programs	
■ CP/M [†] to Pascal file conversion	\$ 50
■ TRSDOS [‡] to Pascal file conversion	\$ 50
■ Z-80 Disassembler/Dump program	\$ 50

- UCSD System for MINC® or PDT®.
- Z-80 Adaptable System (you write BIOS).
- UCSD System for CP/M environments.

PCD Systems is a licensed distributor of the UCSD System for Pascal and Fortran. Dealer inquiries are invited.

PO Box 143 Penn Yan, NY 14527 315-536-3734

I'M A BELIEVER !!

"I Love it !!... It's really a incredible O/S. It' just great!
Now I see why people who have seen it say they are now
believers. I know I am."

LANCE MICKLUS

- 1) Large (8") drive support.
- 2) Double Sided drive support.
- 3) Double Density drive support.
- 4) 80 Track drive support.

*NOTE all above drives may be mixed on any one system and can be configured at Sysgen time or during any Backup!

5) Winchester technology fixed drive support.

6) Supports any combination of the above drives up to a max. of 8 drives.

7) Supports doublespeed processor clock modifications. (Archbold for example)

8) FASTER! — Improved overlay structure using ISAM accessing techniques improves loading times by up to 1400%.

9) General purpose output spoolers of a true, symbiont design provide simultaneous output and program execution without any user intervention.

10) Keyboard Type-Ahead feature permits you to enter keystrokes before your programs need them.

11) User definable keys, all 26 letters.

12) Built in Graphic string packer lets you enter graphic symbols into a BASIC program from the keyboard through the use of the (Clear) key. The (Clear) key is simply held down (just like the (Shift) keys) during other keystrokes and viola...graphics!

13) Dated files. — All files are accompanied by the date of their last modification (creation or write).

14) Marked files. — All files are accompanied by a 'mark' if they have been modified since they were last backed up. This permits the BACKUP utility to copy only those files which have actually been updated since a previous backup.

15) File transfer by class. Allows transferring of all files of a similar directory classification such as /CMD, /BAS, /PCL, etc.

16) Built-in SYSTEM command contains lower case display driver, screen print, break key disable, blinking cursor, disk drive stepping rate and motor-on delay modifications, and more.

17) User may SYSGEN a custom VTOS system configuration containing special I/O drivers, device LINKing and ROUTing, SPOOLing and OEBUG tasks, etc. which will be automatically loaded during the BOOT process without requiring a more lengthy AUTO and CHAIN procedure.

18) Non-BREAKable AUTO and CHAIN commands.

19) Wild-card Directory. Permits you to locate all files of a certain classification such as '/BAS'. Uniformly indicates file size in K (1024 bytes) regardless of drive type. "DIR D" would give you all your files that start with "D".

20) Dynamic file name defaults in APPEND, COPY, and RENAME commands allow you to specify only minimal information about file names.

21) COPY and APPEND commands execute up to 300% faster.

22) ALLOCate command for pre-allocation and non-releasability of file space. File space will never shrink if this option used.

23) MEMORY command for directly setting upper memory limit.

24) Variable Length file support is incorporated which automatically blocks short user data records both within a sector and across sector boundaries thereby taking maximum advantage of disk file space.

25) No security disk needed to make backups or to run the system!

26) Though many O/S bear his design and code VTOS 4.0 is the only Fully Approved Operating System by Randy Cook! And it is FANTASTIC!

27) Endorsed by Scott Adams and Lance Micklus!

COORDINATED BUSINESS SYSTEMS

- EACH MODULE CAN BE OPERATED INDIVIDUALLY OR AS A COORDINATED SYSTEM
- TURN-KEY ERROR CATCHING OPERATION FOR BEGINNERS
- FREE 30-DAY TELEPHONE CONSULTATION WITH SBSG
- EACH MODULE CAN BE FORMATTED TO SPAN DATA ON UP TO 4 DISK DRIVES.
- COMPLETE MANUAL AND DOCUMENTATION ACCOMPANY EACH MANUAL
- MINIMUM SYSTEM REQUIREMENTS - 2 DISK DRIVES FOR MODEL I...1-DISK DRIVE FOR MODEL II

ACCOUNTS PAYABLE

The accounts payable system receives data concerning purchases from suppliers and produces checks in payment of outstanding invoices. In addition, it produces cash management reports. This system aids in tight financial control over all cash disbursements of the business. Several reports are available and supply information needed for the analysis of payments, expenses, purchases and cash requirements. All A/P data feeds General Ledger so that data is entered into the system just once. These programs were developed 5 years ago for the Wang micro-computer and have been tested in many environments since then. The package has been converted to the TRS-80™ and is now a well documented, on-line, interactive micro-computer system with the capabilities of (or exceeding) many larger systems.

ACCOUNTS RECEIVABLE

The objective of a computerized A/R system is to prepare accurate and timely monthly statements to credit customers. Management can generate information required to control the amount of credit extended and the collection of money owed in order to maximize profitable credit sales while minimizing losses from bad debts. The programs composing this system were developed 5 years ago, especially for small businesses using the Wang Microcomputer. They have been tested in many environments since then. Each module can be used stand alone or can feed General Ledger for a fully integrated system.

PAYROLL

Payroll involves many complex calculations and the production of reports and documents, many of which are required by government agencies. It is an ideal candidate for the computer. With this Payroll system in-house, you can promptly and accurately pay your employees and generate accurate documents/reports to management, employees, and appropriate government agencies concerning earnings, taxes, and other deductions. The package has been converted to the TRS-80™ and is now a well documented, on-line, interactive micro-computer system with the capabilities of (or exceeding) many larger systems.

CAPABILITIES:

- ★ performs all necessary payroll tasks including:
 - file maintenance, pay data entry and verification
 - computation of pay and deduction amounts
 - printing of reports and checks
- ★ can handle salaried and hourly employees
- ★ employees can receive:
 - hourly or salary wage
 - vacation pay
 - holiday pay
 - piecework pay
 - overtime pay

(Continued on next page)

CAPABILITIES

- ★ menu driven; easy to use; full screen prompting and cursor control
- ★ invoice oriented; everything revolves around the invoice; handles new invoice or credit memo or debit memo
- ★ invoice information recorded; invoice #, description, buyer, check register #, invoice date, age date, amount of invoice, discount (in %), freight, tax (\$), total payable
- ★ transaction print and file maintenance procedures insure accuracy
- ★ flexible check calculation procedure; allows checks to be calculated for a set of vendors - or - for specific vendors
- ★ program prints your checks; contiguous computer checks with your company letterhead can be purchased from SBSG
- ★ reports include (samples on back):
 - open item listing/closed item listing - both detail and summary
 - debit memo listing/credit memo listing
 - aging
 - check register report (to give an audit trail of checks printed)
 - vendor listing and vendor activity (activity of the whole year)
- ★ fully linked to GENERAL LEDGER; each invoice can be distributed to as many as five (5) different GL accounts; system automatically posts to cash and A/P accounts

CAPABILITIES

- ★ menu driven; easy to use; full screen prompting and cursor control
- ★ invoice oriented; invoices can be entered before ready for billing, when ready for billing, after billing or after paid
- ★ allows entry of new invoice, credit memo, debit memo, or change/delete invoice
- ★ allows for progress payment
- ★ transaction information includes:
 - type of A/R transaction
 - customer P.D. #
 - description of P.D.
 - billing date
 - general ledger account number
 - invoice amount
 - shipping/transportation charges
 - tax charges
 - payment
 - progress payment information
- ★ transaction print and file maintenance procedures insure accuracy
- ★ customer statements printed; computer statements with your company letterhead can be purchased from SBSG
- ★ reports include; (samples on back)
 - listing of invoices not yet billed
 - open items (unpaid invoices)
 - closed items (paid invoices)
 - aging
- ★ fully linked to General Ledger; will post to applicable accounts: debits A/R, credits account you specify

(PAYROLL CAPABILITIES CONTINUED)

- ★ employees can be paid using any combination of pay types (except, hourly cannot receive salary & salary cannot receive hourly)
- ★ special non-taxable or taxable lump sums can be paid regularly or one time (bonus, reimbursements, etc)
- ★ health & welfare deductions can be automatically calculated for each employee
- ★ earnings-to-date are accumulated and added to permanent records; taxes are computed and deducted US income tax, Social Security tax, state income tax, other deductions (regular or one time)
- ★ paychecks are printed, computer checks with your company letterhead can be purchased from SBSG
- ★ calculations are accumulated for: employee pay history, 941A report, W-2 report, insurance report, absentee report
- ★ fully linked to General Ledger Each employee's payroll information can be distributed to as many as (12) twelve different GL accounts, system automatically posts to cash account

INVENTORY/CONTROL INVOICING

- OVER 1000 ITEMS ON MODEL I
- OVER 3000 ITEMS ON MODEL II
- LOW STOCK ALARM
- INVOICING DEDUCTS FROM INVENTORY
- COMPLETE INVENTORY REPORTS
- REORDER POINT REPORT
- QUICK ITEM ACCESS

CLIENT BILLING, STOCK CONTROL, DENTAL BILLING, COMMODITIES
Medicare/Medicaid billing also available

MODEL I	\$125 Per Module
	\$495 Complete System
MODEL II	\$225 Per Module
	\$995 Complete System

MONTHLY NEWSMAGAZINE SUBSCRIBERS ONLY). WE DO
CHARGE A \$3 PENALTY TO COVER POSTAGE AND HANDLING.

GENERAL LEDGER

The General Ledger accounting system consolidates financial data from other accounting subsystems (A/R, A/P, Payroll, direct posting) in an accurate and timely manner. Major reports include the Income Statement and Balance Sheet and a "special" report designed by management. The beauty of this General Ledger system is that it is completely user formatted. You "customize" the account numbers, descriptions, and report formats to suit your particular business requirements. These programs were developed 5 years ago for the Wang micro-computer and have been tested in many environments since then. The package has been converted to the TRS-80™ and is now a well documented, on-line, interactive micro-computer system with the capabilities of (or exceeding) many larger systems.

CAPABILITIES

- ★ more than 200 chart of accounts can be handled
- ★ account number structure is user defined and controlled
- ★ more than 1,750 transactions may be entered via
 - direct posting: done by hand, validated against the account file before acceptance
 - external posting: generated by A/R, A/P, Payroll or any other user source
- ★ data is maintained and reported by:
 - month
 - quarter
 - year
 - previous three quarters
- ★ reports (samples on back) include:
 - trial balances
 - income statement
 - balance sheet
 - special accounts reports and more . . .
- ★ user formats reports with the following designed as you wish:
 - titles
 - headings
 - account numbers
 - descriptions
 - subtotals
 - totals
 - skip lines
 - skip pages
- ★ up to eight levels of totals - fully user designated
- ★ menu driven; easy to use; full screen prompting and cursor control

...EVERYTHING FOR YOUR TRS-80... TRS-80 is a trademark of the Radio Shack Division of Tandy Corporation

MICROSOFT BASIC COMPILER

With TRS-80™ BASIC Compiler, your Level II programs will run at record speeds! Compiled programs execute an average of 3-10 times faster than programs run under Level II. Make extensive use of integer operations, and get speeds 20-30 times faster than the interpreter.

Best of all, BASIC Compiler does it with BASIC, the language you already know. By compiling the same source code that your current BASIC interprets, BASIC Compiler adds speed with a minimum of effort.

And you get more BASIC features to program with, since features of Microsoft's Version 5.0 BASIC interpreter are included in the package. Features like the WHILE...WEND statement, long variable names, variable length records, and the CALL statement make programming easier. An exclusive BASIC Compiler feature lets you call FORTRAN and machine language subroutines much more easily than in Level II.

Simply type in and debug your program as usual, using the BASIC interpreter. Then enter a command line telling the computer what to compile and what options to use.

Voila! Highly optimized, Z-80 machine code that your computer executes in a flash! Run it now or save it for later. Your compiled program can be saved on disk for direct execution every time.

Want to market your programs? Compiled versions are ideal for distribution. You distribute only the object code, not the source, so your genius stays fully protected.

BASIC Compiler runs on your TRS-80™ Model I with 48K and disk drive. The package includes BASIC Compiler, linking loader and BASIC library with complete documentation **\$195.00**

1980 INCOME TAX PAC

Completely Revised • Latest Tax Tables • Fully Tested • Complete Manual and Documentation. The new version of the Income Tax Pacs are full of error catching codes making it impossible to make an error. Follow the simple Step By Step procedure that makes tax preparation simple.

INCOME TAX PAC A **(\$19.95...Cassette)**

For Level II 16K Cassette Only

Does Form 1040 and 1040A

- Schedule A itemized deductions
- Schedule B interest and dividends
- Output to video display
- Schedule TC tax computation

INCOME TAX PAC B **\$49.95...Cassette or Diskette)**

For Level II 16K with or without printer...cassette or disk has all features of Income Tax Pac A Plus works with or without line printer.

- Formats Form 1040 and 1040A for standard tax forms
- Schedule C income from a personally owned business
- Form 2106 employee business expense

PROFESSIONAL INCOME TAX PAC C **\$99.95...Diskette**

For Level II 32K with disk and printer (optional)

Has all features of Income Tax Pac B Plus automatic memory storage for income tax preparers.

- 22 additional schedules and forms
- Formats forms for individual or tractor feed printing

MOD II CPA VERSION **\$199.95**

GUARANTEED PROFIT 91% WINS PLACES 32% AVERAGE PROFIT AT ALL TRACKS-1978 SHOWS

THE HORSE SELECTOR II (FLATS) (By Dr. Hal Davis) **\$50.00**
New simplified version of the original Horse Selector. The first Horse Selection System to actually calculate the estimated odds of each horse.

HIGHER PROFITS (OVER 100%) POSSIBLE THROUGH SELECTIVE BETTING ON:

- Rates each horse in 10 seconds.
- Easy to follow rules.
- Can be used with any Apple II Computer.
- 100% money back guarantee (returned for any reason).
- Uses 4 factors (speed rating, track variant, distance of the present race, distance of the last race).
- Using the above factors, the Horse Selector calculates the estimated odds. BET on horses whose actual payoff (from the Tote Board or Morning Lines) is higher than payoff based on estimated odds.
- Using the above factors, the Horse Selector calculates the estimated odds. BET on any selected horse with an estimated payoff (based on Tote Board or Morning Lines) higher than calculated payoff (based on Horse Selector II).
- Source listing for the TRS-80™, TI-59, HP-67, HP-41, Apple and BASIC Computers.
- No computer or calculator necessary (although a calculator would be helpful for the simple division used to calculate estimated odds).

FREE Dutching Tables allows betting on 2 or more horses with a guaranteed profit.

NEWDOS/80

A New enhanced NEWDOS for TRS-80™ Model I for the 1980's

Apparat Inc., announces the most powerful Disk Operating System for the TRS-80™. It has been designed for the sophisticated user and professional programmer who demands the ultimate in disk operating systems.

NEWDOS/80 is not meant to replace the present version of NEWDOS 2.1 which satisfies most users, but is a carefully planned upward enhancement, which significantly extends NEWDOS 2.1's capabilities. This new member to the Apparat NEWDOS' family is upward compatible with present NEWDOS 2.1 and is supplied on Diskette, complete with enhanced NEWDOS + utility programs and documentation. Some of the NEWDOS/80 features are:

- New BASIC commands that supports with variable record lengths up to 4095 Bytes long.
- New BASIC commands that supports with variable record lengths up to 4095 Bytes long.
- Mix or match disk drives. Supports any track count from 18 to 80. Use 35, 40 or 77 track 5" mini disk drives or 8" disk drives, or any combination.
- A security boot-up for BASIC or machine code application programs. User never sees "DOSREADY" or "READY" and is unable to "BREAK", clear screen, or issue any direct BASIC statement including "LIST."
- New editing commands that allow program lines to be deleted from one location and moved to another or to allow the duplication of a program line with the deletion of the original.
- Enhanced and improved RENUMBER that allows relocation of subroutines.
- Powerful program chaining.
- Device hanging for routing to display and printer simultaneously.
- CDE function; simultaneous striking of the C, D and E keys will allow user to enter a mini-DOS to perform some DOS commands without disturbing the resident program.
- Upward compatible with NEWDOS 2.1 and TRSDOS 2.3.
- Includes Superzap 3.0 and all Apparat 2.1 utilities.

\$149.00

STOCK MARKET MONITOR

Galactic Software Ltd.

CASSETTE VERSION **\$89.00**
DISK VERSION **\$99.00**

1. The system is designed for the active "trader" not the "long term" investor, as the system is "technically" oriented.
2. For the TRS-80™ Model I, Level II, 16K or more. Available in both disk and tape versions.
3. Tracks user selected issues, in a technical system that reflects the issue's performance against the overall market.
4. Set up data is input by the user from the Standard and Poors stock guide or Value Line.
5. Daily issue data, "high", "low", "close" and "volume" are input from any newspaper containing this information.
6. Daily overall market, "volume" and "closing Dow" are also provided from a newspaper.
7. Volume and price changes of an issue, as they compare to volume and price changes of the overall market, are the basis of this system's analysis of the given issue.
8. Comparisons of the issue against itself are also done. This may allow the user to spot "unusual" activity on this issue.
9. Clear indications are given as to whether the issue is "out performing", "under performing" or "performing" with the market.
10. Complete video and printed output is provided.
11. This program is intended to be a guide to indications, and is not to be used as a sole recommendation to buy, sell or hold an issue. These decisions are the responsibility of the user and his brokerage.

BUSINESS 100 PROGRAM LIST

1 RULE78	Interest Apportionment by Rule of the 78's
2 ANNU1	Annuity computation program
3 DATE	Time between dates
4 DAYYEAR	Day of year a particular date falls on
5 LEASEINT	Interest rate on lease
6 BREAKVEN	Breakeven analysis
7 DEPRSL	Straightline depreciation
8 DEPRSY	Sum of the digits depreciation
9 DEPRDB	Declining balance depreciation
10 DEPRDDB	Double declining balance depreciation
11 TAXDEP	Cash flow vs. depreciation tables
12 CHECK2	Prints NEBS checks along with daily register
13 CHECKBK1	Checkbook maintenance program
14 MORTGAGE/A	Mortgage amortization table
15 MULTMON	Computes time needed for money to double, triple, etc.
16 SALVAGE	Determines salvage value of an investment
17 RRVARIN	Rate of return on investment with variable inflows
18 RRCOMST	Rate of return on investment with constant inflows
19 EFFECT	Effective interest rate of a loan
20 FVAL	Future value of an investment (compound interest)
21 PVAL	Present value of a future amount
22 LOANPAY	Amount of payment on a loan
23 REGWITH	Equal withdrawals from investment to leave 0 over
24 SIMPDISK	Simple discount analysis
25 DATEVAL	Equivalent & nonequivalent dated values for oblig.
26 ANNUDEF	Present value of deferred annuities
27 MARKUP	% Markup analysis for items
28 SINKFUND	Sinking fund amortization program
29 BONDOVAL	Value of a bond
30 DEPLET	Depletion analysis
31 BLACKSCH	Black Scholes options analysis
32 STOCVAL1	Expected return on stock via discounts dividends
33 WARVAL	Value of a warrant
34 BONDOVAL2	Value of a bond
35 EPSEST	Estimate of future earnings per share for company
36 BETAALPH	Computes alpha and beta variables for stock
37 SHARPE1	Portfolio selection model i.e. what stocks to hold
38 OPTWRITE	Option writing computations
39 RTVAL	Value of a right
40 EXPVAL	Expected value analysis
41 BAYES	Bayesian decisions
42 VALPRINF	Value of perfect information
43 VALADINF	Value of additional information
44 UTILITY	Derives utility function
45 SIMPLEX	Linear programming solution by simplex method
46 TRANS	Transportation method for linear programming
47 EOQ	Economic order quantity inventory model
48 QUEUE1	Single server queueing (waiting line) model
49 CVP	Cost-volume-profit analysis
50 CONDPFOT	Conditional profit tables
51 OPTLOSS	Opportunity loss tables
52 FQOQ	Fixed quantity economic order quantity model

53 FQEOVSH	As above but with shortages permitted
54 FQEOQPB	As above but with quantity price breaks
55 QUEUECB	Cost-benefit waiting line analysis
56 NCFANAL	Net cash-flow analysis for simple investment
57 PROFIND	Profitability index of a project
58 CAP1	Cap. Asset Pr. Model analysis of project
59 WACC	Weighted average cost of capital
60 COMBAL	True rate on loan with compensating bal. required
61 DISCBAL	True rate on discounted loan
62 MERGANAL	Merger analysis computations
63 FINRAT	Financial ratios for a firm
64 NPV	Net present value of project
65 PRINDLAS	Laspeyres price index
66 PRINDPA	Paasche price index
67 SEASIND	Constructs seasonal quantity indices for company
68 TIMETR	Time series analysis linear trend
69 TIMEMOV	Time series analysis moving average trend
70 FUPRINF	Future price estimation with inflation
71 MAILPAC	Mailing list system
72 LETWRT	Letter writing system-links with MAILPAC
73 SORT3	Sorts list of names
74 LABEL1	Shipping label maker
75 LABEL2	Name label maker
76 BUSBUD	DOPE business bookkeeping system
77 TIMECLK	Computes weeks total hours from timeclock info
78 ACCTPAY	In memory accounts payable system storage permitted
79 INVOICE	Generate invoice on screen and print on printer
80 INVENT2	In memory inventory control system
81 TELDIR	Computerized telephone directory
82 TIMUSAN	Time use analysis
83 ASSIGN	Use of assignment algorithm for optimal job assign
84 ACCTREC	In memory accounts receivable system-storage ok
85 TERMSPAY	Compares 3 methods of repayment of loans
86 PAYNET	Computes gross pay required for given net
87 SELPR	Computes selling price for given after tax amount
88 ARBCOMP	Arbitrage computations
89 DEPRSF	Sinking fund depreciation
90 UPSZONE	Finds UPS zones from zip code
91 ENVELOPE	Types envelope including return address
92 AUTOEXP	Automobile expense analysis
93 INSFILE	Insurance policy file
94 PAYROLL2	In memory payroll system
95 DILANAL	Dilution analysis
96 LOANAFFD	Loan amount a borrower can afford
97 RENTPRCH	Purchase price for rental property
98 SALELEAS	Sale-leaseback analysis
99 RRCONVBD	Investor's rate of return on convertible bond
100 PORTVAL9	Stock market portfolio storage-valuation program

- ☐ CASSETTE VERSION \$ 99.95
- ☐ DISKETTE VERSION \$ 99.95

- Tips for running your Model II
- Latest announcements and updates

**The Newsletter For Owners Of The
TRS-80™ MODEL II MICROCOMPUTER****SPECIAL CHARTER SUBSCRIPTION RATE \$12.00 □ (For 12 Issues)****MOD-II PROGRAMS CURRENTLY AVAILABLE**

- (1) **ELECTRIC PENCIL** (Michael Shrayar Software).....Complete word processor with extensive editing and printer formatting features.....\$275 (STANDARD CP/M VERSION).....\$300 (DIABLO, NEC OR OUME CP/M VERSION).....\$325 (STANDARD TRSDOS VERSION).....\$350 (DIABLO, NEC OR OUME TRSDOS VERSION).
- (2) **GENERAL LEDGER, ACCOUNTS RECEIVABLE, ACCOUNTS PAYABLE, INVENTORY CONTROL AND PAYROLL** (Small Business Systems Group).....works under TRSDOS.....can be used one module at a time or as a coordinated system.....\$225 per module.....\$995 for the complete system.
- (3) **GENERAL LEDGER, ACCOUNTS RECEIVABLE, ACCOUNTS PAYABLE, INVENTORY CONTROL AND PAYROLL** (Peachtree Software).....requires CP/M and MICROSOFT BASIC.....professional business systems.....turn key operation.....discounts available.....\$1000 per module.....\$5000 for the complete system.
- (4) **SELECTOR III** (Micro-Ap).....complete data management system.....user defined fields and codes.....manages any list defined by the user.....includes additional modules for simplified inventory control, accounts receivable and accounts payable.....requires CBASIC-2 and CP/M.....\$295.
- (5) **GLECTOR** (Micro-Ap).....add on package to the SELECTOR III.....general ledger that allows the user to define a customized chart of accounts.....\$250.
- (6) **GSF** (Racet Computers).....Generalized Subroutine Facility.....a series of super fast machine language utilities that can be called from a BASIC program (no machine language knowledge required).....sorts 1000 items in under 5 seconds.....allows PEEK and POKE statements.....move data blocks.....compress and uncompress data.....works under TRSDOS.....\$50.
- (7) **DSM** (Racet Computers).....Disk Sort Merge.....sorts and merges large multiple diskette files on a 1 to 4 drive system.....NOT AN IN MEMORY SORT.....can actually alphabetize (or any other type or sort) 4 disk drives worth of data.....sorts one complete disk of information in 10 minutes.....information is provided to use DSM with the RS MAILING PROGRAM.....works under TRSDOS.....\$150.
- (8) **RSM** (Small Systems Software).....a machine language monitor and disassembler.....can be used to see and modify memory or disk sectors.....contains all the commands found on the Model-I version plus some additional commands for the MOD-II.....works under TRSDOS.....\$39.95.
- (9) **CP/M** (Lifeboat Associates).....an alternative operating system to TRSDOS that allows users to use hundreds of programs currently available to CP/M owners.....This is the only version of CP/M for the MOD-II that comes with an elementary CP/M guide written especially for MOD-II owners.....\$170.
- (10) **MICROSOFT BASIC** (Microsoft).....an enhanced version of the MICROSOFT BASIC found on TRSDOS.....works under CP/M.....adds commands such as chaining (allows the user to LOAD and RUN a new program without losing the variables currently in memory).....long variable length file records, WHILE/WEND and others.....can be used with the BASIC COMPILER to speed up programs (3-10 times faster execution).....\$350.
- (11) **CBASIC-2**.....a non-interactive BASIC used for many programs that run under CP/M.....requires CP/M.....allows user to make more efficient use of disk files.....eliminates the use of the most line number references.....required for programs such as SELECTOR and GLECTOR.....\$120.
- (12) **MAILING ADDRESS** (Peachtree Software).....requires CP/M.....keeps track of name and address information and allows the selective printing of the information in the form of mailing lists or address labels.....unique key structure and formatting structure allows for a multitude of retrieval alternatives.....\$790.
- (13) **PROPERTY MANAGEMENT** (Peachtree Software).....requires CP/M.....keeps track of all financial records related to property management.....\$1500.
- (14) **FORTRAN-80** (Microsoft).....ANSI 66 (except for COMPLEX) plus many extensions.....requires CP/M.....\$425.
- (15) **N & E COMPUTRONICS, INC. SHARE-A-PROGRAM DISKETTE #1**.....works under TRSDOS.....a collection of programs written by MOD-II owners.....programs include date base management.....a word processor.....mail system.....mortgage calculations.....checkbook register.....and many others.....\$8 (add \$3 postage outside of the United States, Canada and Mexico).....FREE if you send us a diskette containing a program that can be added to the SHARE-A-PROGRAM DISKETTE.
- (16) **MEMOREX OR WABASH CERTIFIED DISKETTES**.....\$49.95 (per box of 10).
- (17) **FLEXI-MATIC DISKETTE STORAGE TRAY**.....Stores 110 diskettes.....comes complete with index-dividers, dust cover, tilt plates and adjustable spacing.....\$55.00.
- (18) **WORD-STAR**.....The ultimate word processor.....a menu driven word processing system that can be used with any printer. All standard word processing commands are included.....plus many unique commands only found on WORD STAR.....requires CP/M.....\$495.
- (19) **MAIL LIST MERGE**.....An add on package that allows the user to send form letters (created on WORD-STAR) to any compiled mailing list (using any CP/M based MAIL program such as the PEACHTREE MAIL PROGRAM).....requires CP/M, WORD STAR and any CP/M based mail program.....\$150.
- (20) **EDITOR ASSEMBLER** from Galactic Software Ltd. is the first user oriented Editor Assembler for the MODEL II and was designed to utilize all the features of the MODEL II. It includes innovative features for ease of coding and debugging and complete documentation (over 120 pages).....works under TRSDOS.....\$229.
- (21) **MAIL/FILE SYSTEM** from Galactic Software Ltd. stores 2,500 names per disk. No sorting time is required since the file is automatically sorted by first and last name plus Zip Code on input. Retrieve by any combination of 19 user codes. Supports an 11 digit alphanumeric Zip. Supports a message line. Comes complete with user-oriented documentation (100-page manual). Allows for company name and individual of a company and complete phone number (and extensions).....works under TRSDOS.....\$199.

Home-Brew TRS-80

Russell W. Steele
611 Lynden Ave.
Grass Valley, CA 95945

It's been said that the most sincere form of flattery is to be copied. But, when the copy is far superior to the original, it's called progress.

I have a friend and co-worker, Wilbur Dammann, who admired the TRS-80 and thought he might like to have one. He is one

of those guys who can see and make improvements in almost everything, from cars to solar systems.

Several of Will's friends used the TRS-80, so he recognized its potential, as well as some limitations such as the tricky CLOAD, slow clock speed, inadequate power supply and limited expansion capability (without an expensive interface unit).

He decided the solution to his problem was to build a TRS-80

THOUSANDS OF COMPUTERS ARE GATHERING IN BOSTON.

The biggest and best computer show ever to be in the Boston area is ready to take place. Make sure you take it in.

Over \$50 million worth of software and hardware for business, government, home and personal use will be featured at the new Northeast Computer Show in November. Computers from \$150 to \$250,000, mini and micro computers, data- and word-processing equipment, telecommunications, office machines, peripheral equipment and services will all be on display and for sale right on the spot.

All the major names like IBM, Xerox, Radio Shack and Apple will be there. There will be conferences on business uses of small to medium sized computers, and how to make purchasing evaluations.

Plus, robots, computerized video games, computer art and computer music will entertain and educate kids, spouses and people who don't know a program from a memory disk.

It's going to be a great show for everyone. Admission for adults is only \$5. The public is

invited, and no pre-registration is necessary. Don't miss the coming of the computers. Show up for the show.

BOSTON

HYNES AUDITORIUM, PRUDENTIAL CENTER
THURSDAY-SUNDAY, NOVEMBER 20-23

11 A.M. TO 9 P.M. THURS.-SAT., 11 A.M. TO 5 P.M. SUN.

THE NORTHEAST COMPUTER SHOW

Produced by National Computer Shows, 824 Boylston Street, Chestnut Hill, MA 02167, Telephone (617) 739-2000.

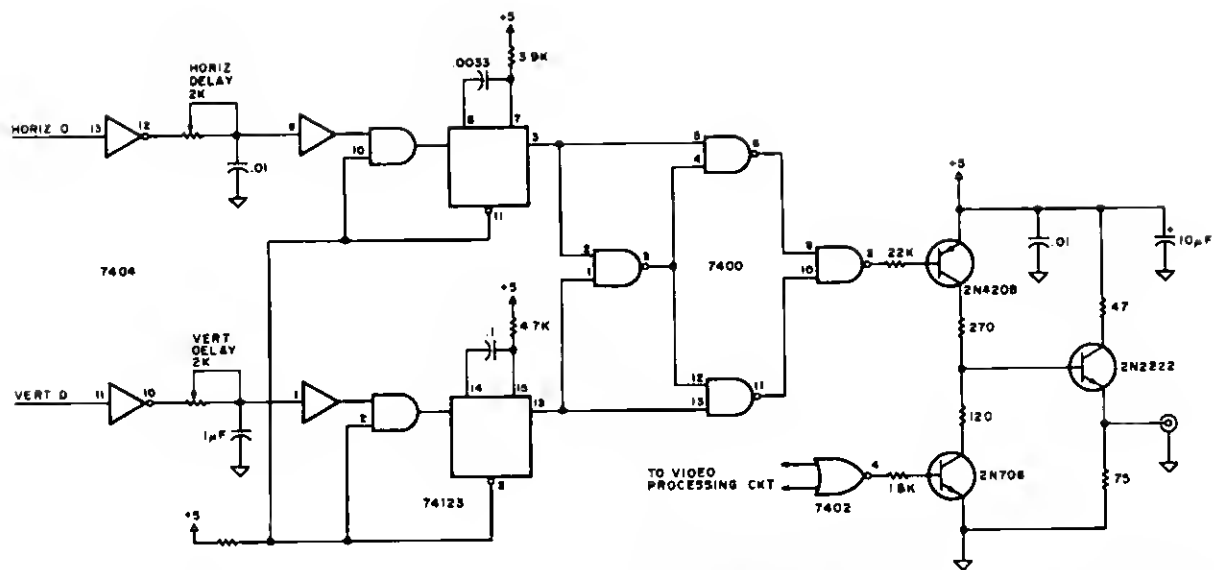

Fig. 1. Video Decode with Sync Pulse Generator and Video Output Improvement.

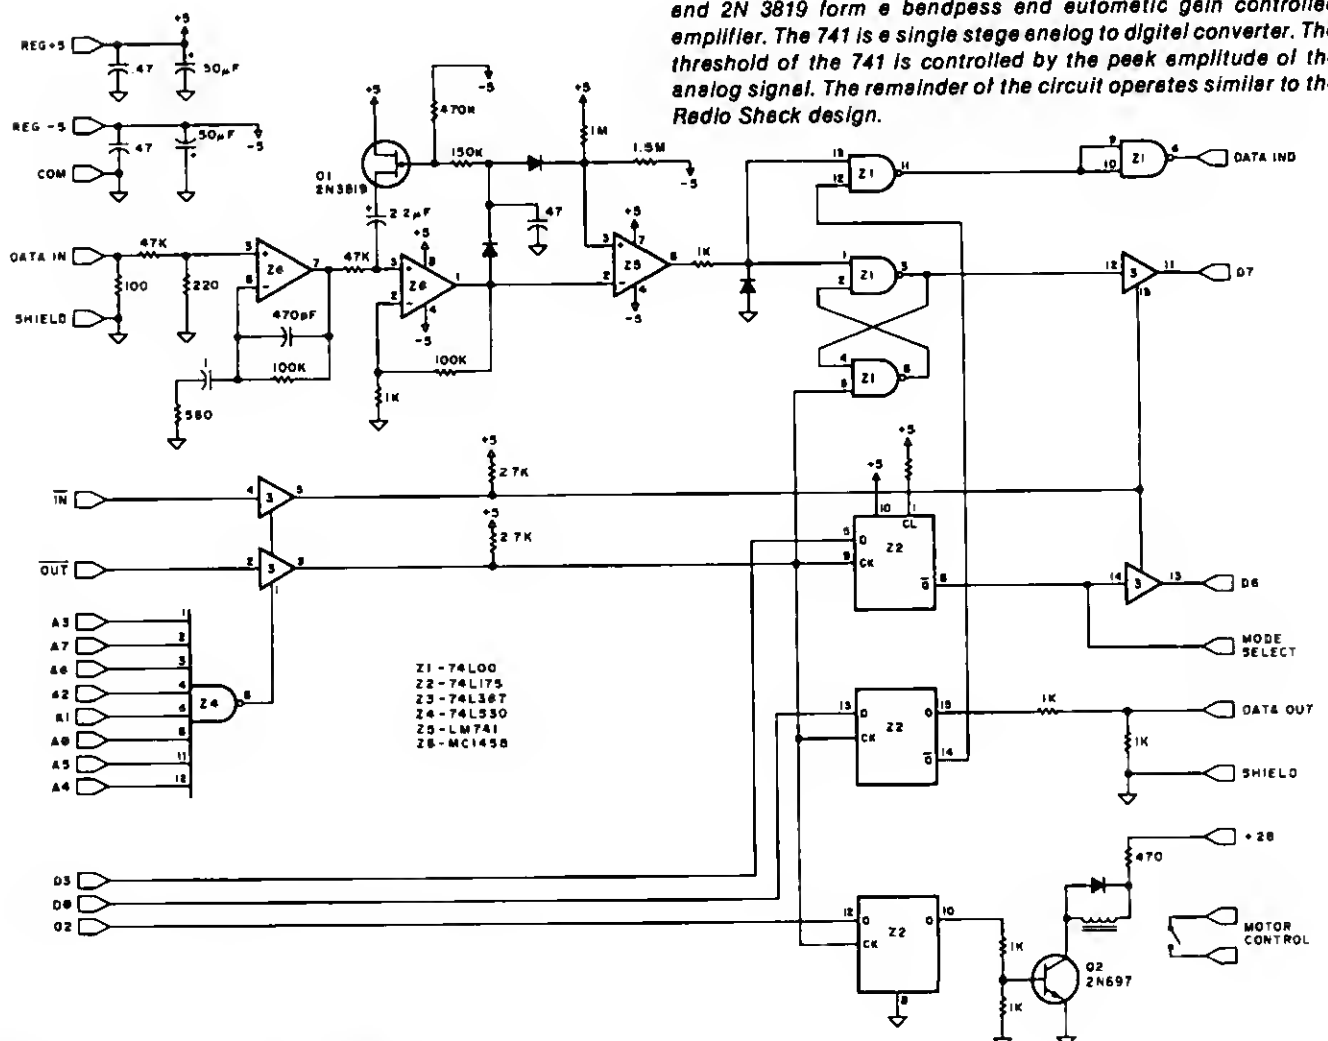

Fig. 2. This is a totally redesigned cassette I/O circuit. The MC1458 and 2N 3819 form a bandpass and automatic gain controlled amplifier. The 741 is a single stage analog to digital converter. The threshold of the 741 is controlled by the peak amplitude of the analog signal. The remainder of the circuit operates similar to the Radio Shack design.

DOSPLUS 3.1

DOSPLUS VERSION 3.1 FACT SHEET

- 1) Variable length records.
- 2) Full lower case support and detection
- 3) Repeating keyboard w/debounce
- 4) Execute only protection feature for BASIC programs
- 5) Track support for 35-80 track drives
- 6) Device I/O handling (*PR, *DO, *KI)
- 7) Built-in screen printer
- 8) Multiple command chaining with "DO"
- 9) Built-in memory test
- 10) New printer driver which allows complete forms control and paging
- 11) Execute any DOS command from BASIC and return to BASIC
- 12) Free space map of diskette
- 13) Copy with variable length files
- 14) RS232 switch status and UART check
- 15) Create and pre-allocate files from DOS
- 16) Boot without re-setting clock and date
- 17) Display current time and date from DOS
- 18) New DISKDUMP sector display/modify (real-time)
- 19) New BACKUP (more reliable, no pack ID check)
- 20) New FORMAT (more reliable, no need to bulk erase disk first)

*****5 MORE UTILITIES*****

- 1) Single drive copy
- 2) Restore (dead files)
- 3) Purge (unwanted files)
- 4) Clearfile (destroy data with zeros)
- 5) Transfer (moves all files from one disk to another)

Master Diskette Directory Ver 1.1

This program will read the directories of up to 320 diskettes or 5000 files! Insert your diskette in the drive, press enter, and it works automatically to read, store, and categorize your files. No more looking through box after box of diskettes looking for those favorite programs that are "Around Here Somewhere". You can get a listing of all the files on all the diskettes. In addition, you can list them by file extension, diskette number, or program category. With master directory, you need never again worry about the frustration of not being able to locate a particular program. Master directory will search for a particular file name and give you every occurrence of that file, its size, and the diskette number that contains it.

A totally self contained, machine language program on a self-booting diskette; master directory will work equally well on single or multiple drive systems.

Dosplus - \$99.95 Master Directory - \$29.95

% STAT-BALL % Baseball Simulation

% STAT-BALL % is not an arcade type game, but a
comprehensive, 3 part statistical baseball simulation
package that uses real life pitcher and batter statistics to
simulate game play.

During the game, 12 performance categories are
computed and displayed for batters, 10 for pitchers. These
stats reflect the player's game performance and will follow
closely a player's actual ability. Stats may be viewed on a
per game basis or kept for many games.

Agonize when your best power hitter drops a routine
fly, feel the thrill of victory when he hits a deep fly over the
wall. All action is described as it happens to add tension and
excitement to this engrossing game.

YOU'RE THE MANAGER! Select your own lineup,
make all types of substitutions, call your own strategy and
live with it! Play modern, old timer, or mixed teams.

This package consists of 3 programs:

- (1) GAME
- (2) RECORDS (Sorts up to 150 players
into 14 categories based
on relative performance)
- (3) WORKUP/EDIT (Establish, edit, or mix
players).

- Features include:
- Solitaire or head to head competition
 - Batter's ability ratings include bunting,
running, and errors
 - Pitcher's ability ratings include
• 3 offensive and defensive strategy
options
 - Full 25 man rosters
 - Printer option (32 chr/in or more)
 - Top quality tape
 - Detailed instructions
 - FREE 79: Pirates and Orioles for series
replay

PACKAGE DEAL OF THE MONTH #14

10 DISKETTES AND A DISK LIBRARY PRGRM.

We'd like to introduce you to a new line
of soft sector, 5 1/4 inch diskettes for the
TRS-80. They're manufactured by
Nashua, the same company who's been
servicing mainframe computers for
years! We've have been testing
them for over 3 months with error
free results.

DEAL #14 This package contains 1 box
(10) of Nashua diskettes, plus one of your
diskettes you will find our powerful **DISKLIB**
program. This exciting utility is so practical it
automatically reads disk directories and
creates a master file of your programs. It
prints a master listing to make finding
programs easier.

SPECIAL FOR DOS OWNERS

compatible system from the ground up, improving, where he could, on the TRS-80 design.

Initial Circuit Design

Shortly after he became interested in the TRS-80, Will obtained a copy of its schematic. A few weeks later Radio Shack published the *TRS-80 Technical Reference Manual*. With both a schematic and technical data, the design advanced rapidly.

Will modified the clock circuit to select the CPU processing speed and improved the stability of the video display. He redesigned the CLOAD/CSAVE circuits, the systems control circuits and power supply. He added provisions for both Level I and II BASIC.

Schematics for the video sync, cassette input/output and power supply circuits are shown in Figs. 1, 2, 3 and 4.

Other modifications and design changes were made to reduce the number of parts to take advantage of those he had on hand and to improve performance.

One of Will's goals was to build as much of his system as possible from a bottomless junk box of electronic parts which he has collected over the years. Those parts he did buy (character generator, graphics generator, Level I and II ROM and assorted chips) came from Radio Shack. The CPU was purchased from an advertiser in the back of this magazine. All of the memory except for the video memory came from friends who kept their 4K chips when they upgraded to 16K.

Physical Layout

Will wanted a bus-oriented system which could be expanded as his needs and capabilities grew.

In approaching the layout problem, he grouped specific functions into blocks of processing, memory, video and input/output. Each function was assigned to a 5 by 7 PC board. To keep each function an integral block, he devised a series of piggyback boards for those circuits that could not be fit on the single 5 by 7 board. Each card

was provided with its own 5-volt regulator and supplied 10 volts from a common power bus.

After juggling the circuit sub-modules until he found the best fit, Will's basic design evolved into a processor board, ROM board, RAM board(s), video board and cassette board.

The processor board includes the CPU, clock and first divider chain, and the reset functions. The ROM board has provisions for both Level I and II ROMs, plus the address decoder circuits for up to 48K of RAM. The current RAM boards, with plug-in assembly, are designed to hold two sets of 16-pin dynamic RAM chips. There is room on the motherboard for additional RAM boards with memory up to 48K.

The video board holds the video divider chain, multiplexer and video memory. A plug-in assembly holds the character/graphics generator, sync circuits and video output. The cas-

setta I/O board is built on a smaller 7 by 3 board, but is compatible with the bus structure.

Each printed circuit card is designed to plug into a 96-pin motherboard. The motherboard is built with double-sided PC board with alternate traces on

opposite sides of the board. Fig. 5 shows how the 96-pin sockets were soldered to the board.

The bus structure is shown in Table 1. There is ample room on the motherboard for expansion.

Future expansion will include a parallel/serial I/O board, disk

Photo 2. The Complete System.

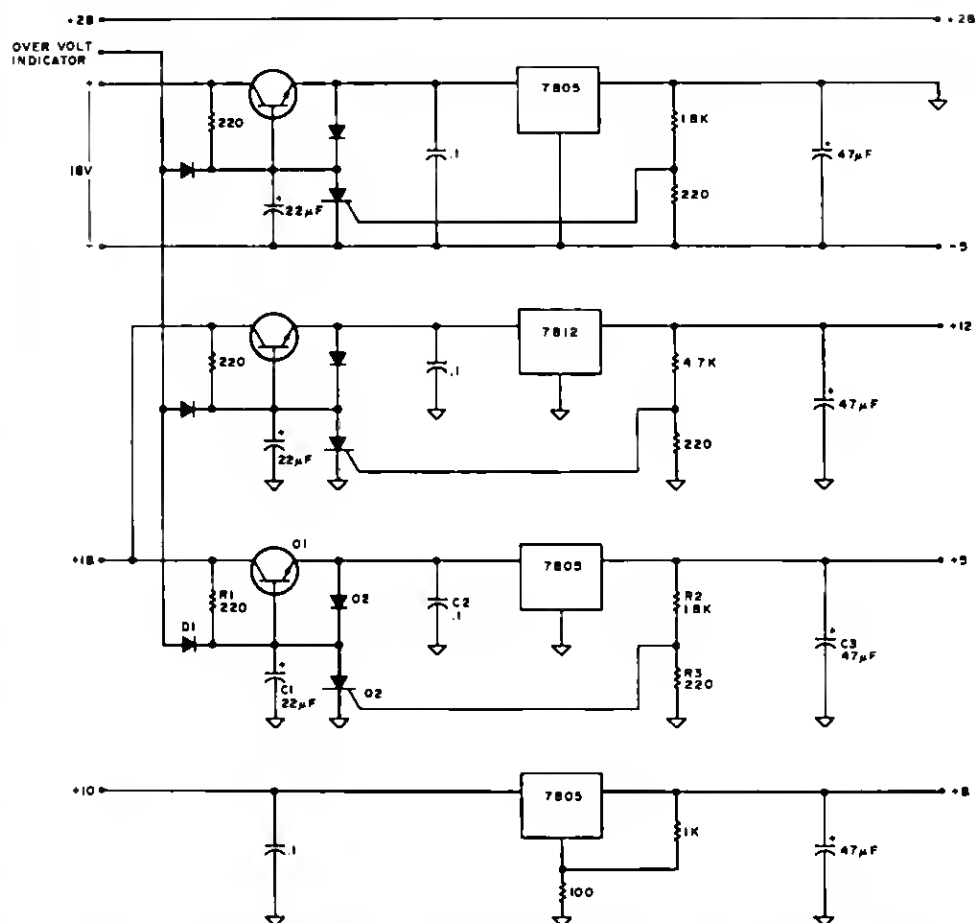

Fig. 4. Mainframe and Circuit Board Regulators Assembly. The regulator circuits use a unique over-voltage protection circuit. The transistor, SCR and resistors R2 and R3 are the principal components in the overvoltage protection scheme. The transistor, R1 and C1 form a dynamic filter.

controller, A/D converter and of course, more memory. The circuit diagrams for each of the basic modules are shown in Figs. 6 through 9.

Will totally redesigned the power supply and incorporated it into the system. His primary power supply was built on the main chassis to provide unregulated 10 volts for the bus in addition to the regulated +12 volts and -5 volts required by dynamic RAM memory.

Each regulated voltage source has a unique dynamic filtering and overvoltage protection circuit. They shut down the power to the circuit by turning off Q1 and illuminating an overvoltage LED indicator on the front panel. (The schematic for this circuit is included as Fig. 4.) This is not a crowbar circuit that

could blow a fuse, but an electronic control of the overvoltage condition. Transistor Q1, resistor R1 and capacitor C1 also provide the dynamic filtering.

In addition to the power supplied to the bus, a regulated six volts is provided to the tape recorder. By operating the recorder on regulated six volts, the voltage fluctuations caused by the recorder being switched on and off are eliminated. The possibility of 60-cycle hum creeping into the recorder is also reduced.

To provide power for future control functions and provide more reliable tape recorder relay operations, a +28-volt DC source was included as part of the power supply. A single transformer with all the necessary voltages was not available, so

Will rewound an old one.

As you can see in Photo 1, the primary power supply fits neatly into the case. A small fan was installed to provide enough cooling for reliable operation.

Construction

Will carefully draw each PC

board circuit on tracing paper, using black ink for the top PC traces and red for the bottom PC traces. Each diagram was carefully checked and a circle made to indicate an IC connection, discrete component connection or a connection that passed through to the other side of the

Fig. 5. Details of Mother Board Construction.

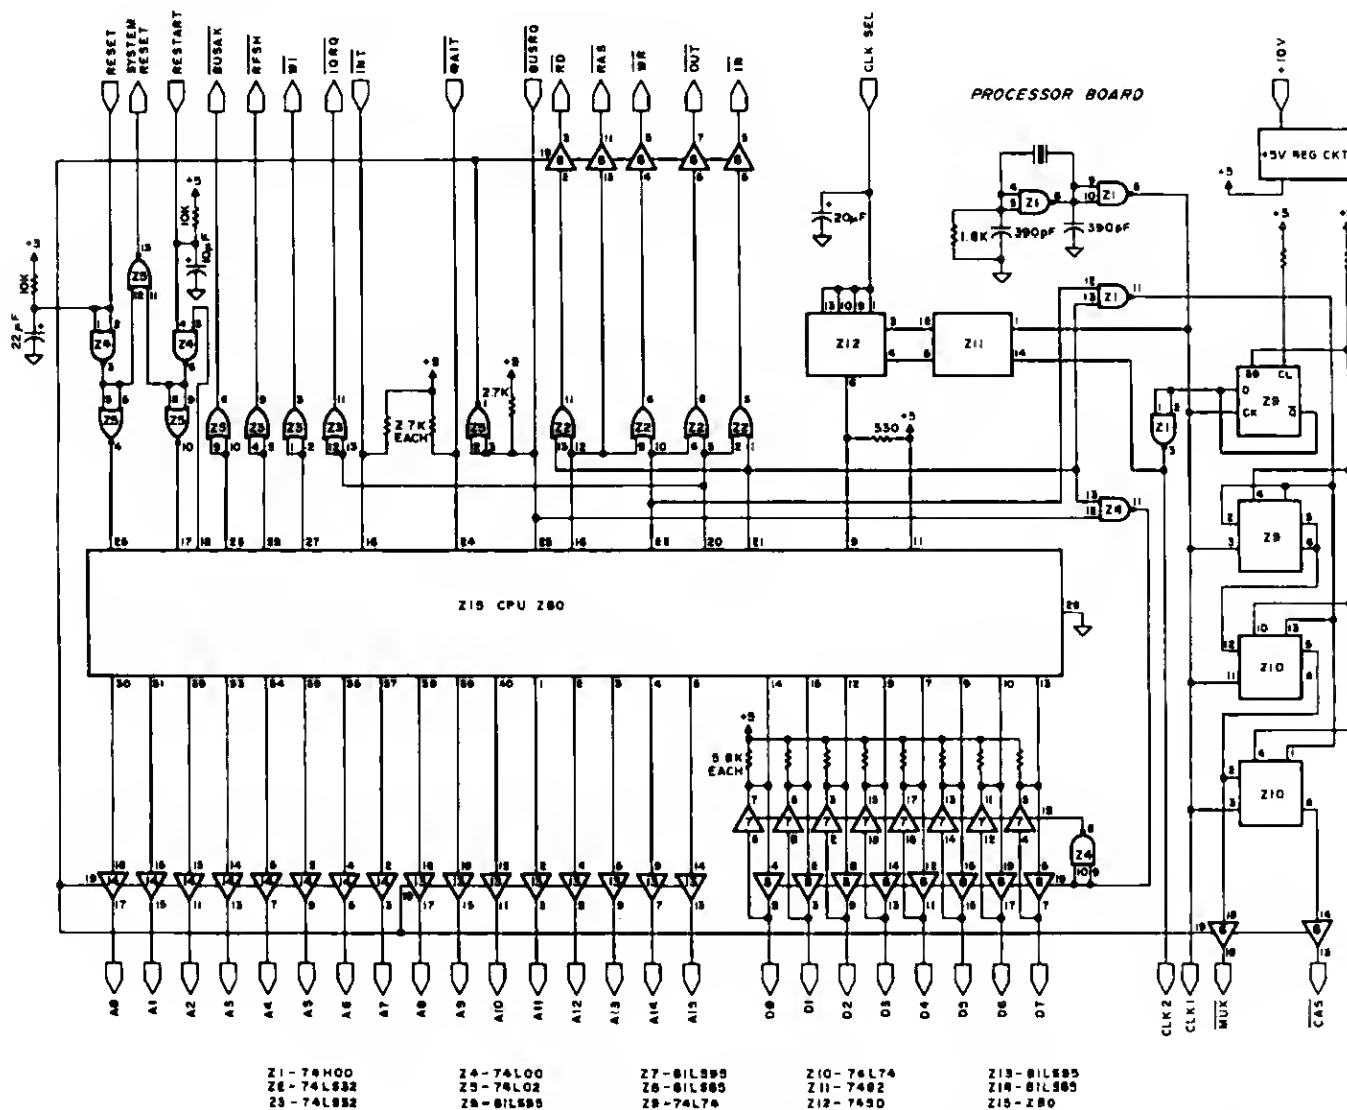

Fig. 6. The Basic Processor Board.

Introducing a new line of cases and power supplies (with or without disk drives!)

The choice is yours

Whether you need professional-looking cases and power supplies for your present hardware or complete disk drive packages, call A.M. Electronics. We manufacture a complete line of affordable, high-quality and readily-available disk drive components to expand your TRS-80™ system.

Disk drive enclosures

All of our disk drive enclosure products feature:

- One year power supply guarantee. Each unit is 100% tested, regulated and fused.
- Optimum top-end-bottom venting for improved convection cooling and lower operating temperatures.
- Excellent RF interference shielding. Steel covers come with lustrous dark grey finish to complement your TRS-80™ hardware.
- Built-in provisions for optional extender cable (5' only).

Complete disk drive packages

Our complete disk drive packages feature proven MPI and Siemens drives and are designed to meet all your storage requirements. As with everything we sell, A.M. Electronics tests each drive for 100% reliability prior to shipment.

Manufacturer-direct savings

When you order from us, you buy directly from the manufacturer. There are no "middlemen" between us and our customers, so you'll realize significant savings like these:

*TRS-80 is a trademark of Tandy Corp.

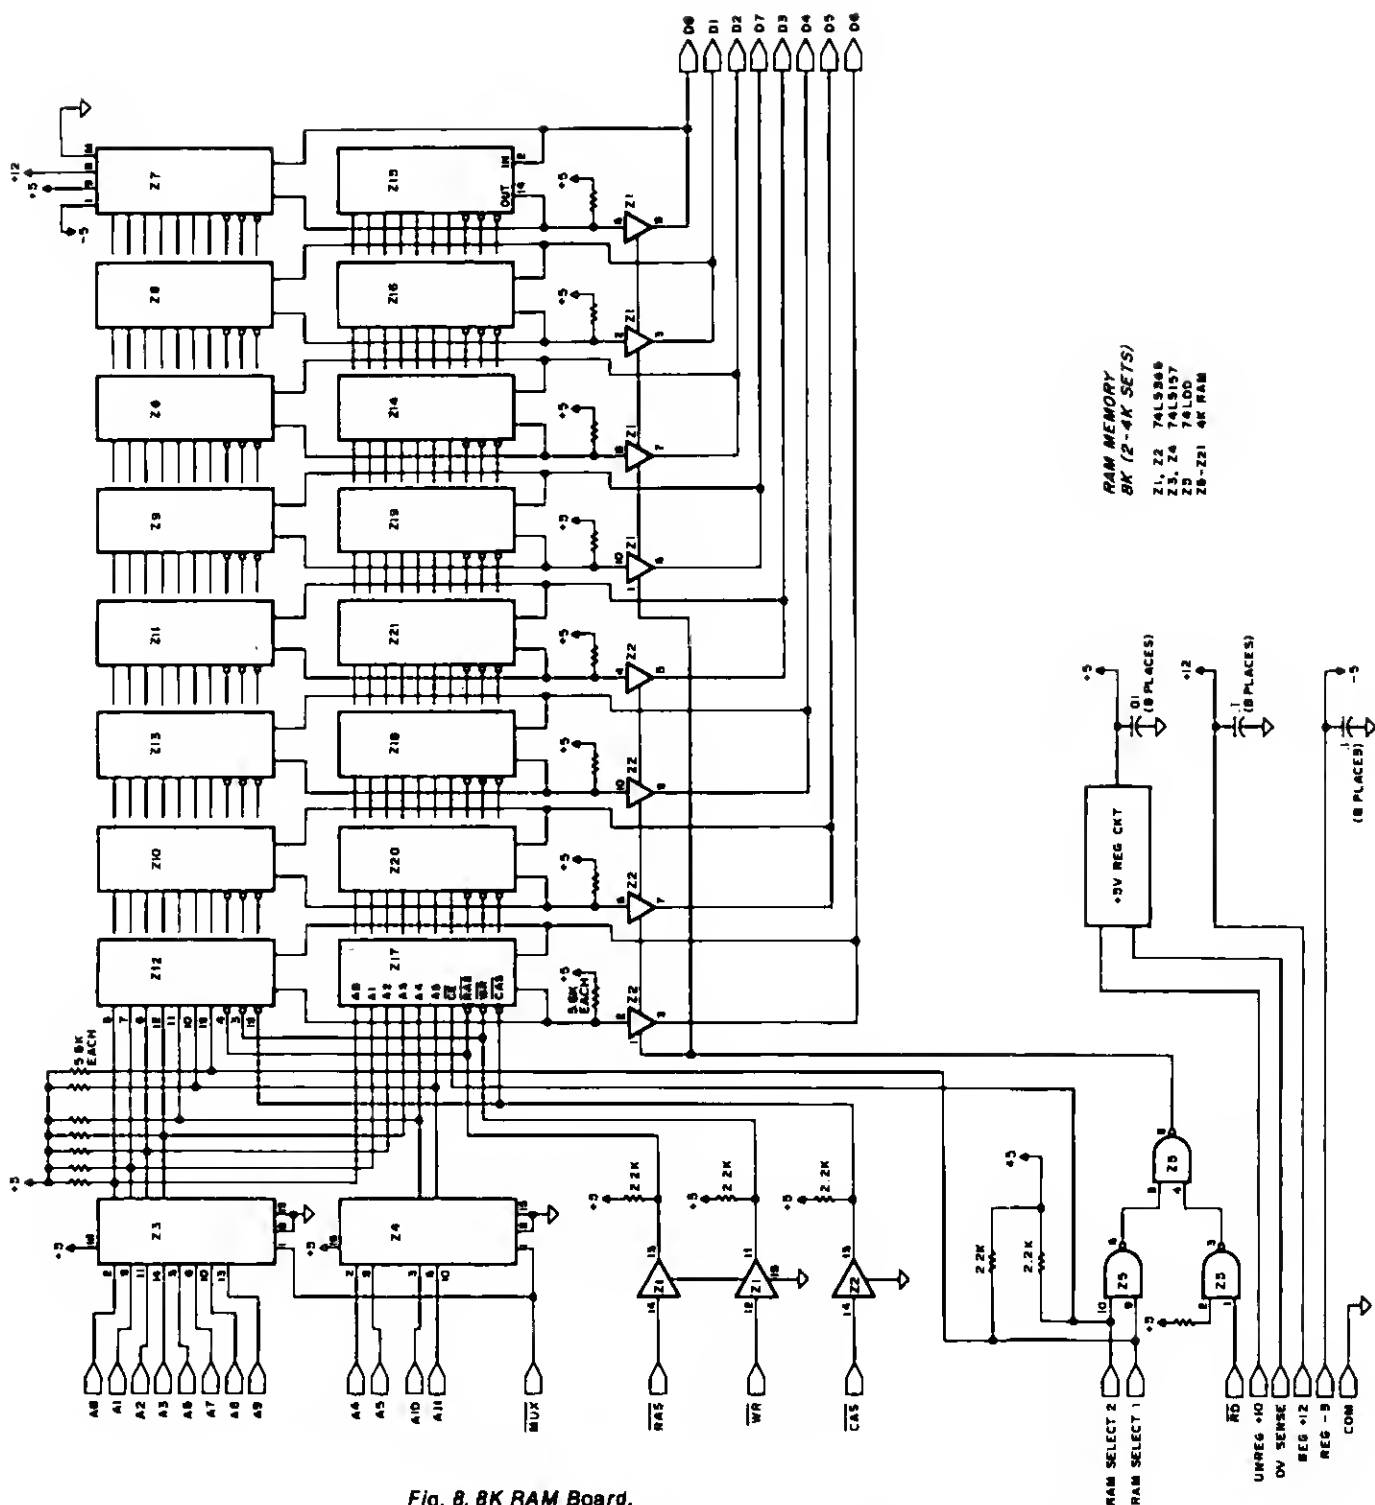

Fig. 8. 8K RAM Board.

board.

Next, Will pasted the diagram to a double-sided PC board with rubber cement and drilled holes in it with a dantel tool. The holes would be a guide for drawing on the PC traces with waterproof ink.

The copper was scrubbed clean before drawing the PC traces.

Problems with ordinary draft-

ing pens developed because the waterproof ink dissolved their plastic parts. Will devised an all-metal mechanical pen to draw the traces.

Once the circuits were drawn on the copper boards, they were etched in ferric chloride. Next the cards were washed and the copper traces tinned with a hot soldering iron.

Parts mounting was typical

for PC boards, except at points where parts passed through the board. Without through-hole plating, it's necessary to solder the leads on both sides of the board.

The only other exception to normal construction practices was the building and installing the piggy-back boards. Gold-plated cable-conductor pins were soldered into the appropri-

ate address, data and control lines.

Memory Boards and Keyboard

After the memory boards were installed and checked out, Will experienced a number of program glitches. Tracking down the problem, he discovered individual memory bits were modified at random. Running a memory test tape pro-

Commander

COMPUTER CONTROLLED - REMOTE CONTROL
Now an inexpensive and direct carrier current interface between the TRS-80 and the BSR X-10 remote control modules. The MICRO COMMANDER X-10 modules and your computer can control your lights, appliances, motors, TV, stereo, heaters, alarms, fans, pumps, etc.

COMPUTER CONTROLLED - SECURITY
Add a new dimension to your security system. Place your home under control of your computer real time clock while you are on vacation. Add an input port to your computer and intelligence to your home. With switches on doors or windows your computer can welcome guests or frighten intruders.

EASY TO USE - NO WISDOM NEEDED
Total control of all X-10 modules. Utilize all 256 house and unit code combinations. Direct interface to AC power line. No command console to purchase. Noasonic link. Plug directly into TRS-80 Model I (Level II or Disk) cassette jack or any 1 bit input and 1 bit output TTL port.

MANUAL INCLUDES ALL SOFTWARE LISTINGS

The 14K basic 4 in 1 program does the following:
Loads machine language driver.
Simulates command console.
Provides sequential operation.
Utilizes real time clock for control.
Complete documentation includes 8000 source listing.

MODEL II DISASSEMBLER PACKAGE

INCLUDES:

1. Disassembler-II
2. Hex memory dump program
3. ASCII memory dump program
4. Documentation

Dump memory using the HEX MEMORY DUMP program. Annotate obvious non-280 code areas on the hex dump printout. Next run the ASCII MEMORY DUMP program several times using various bit options (fully explained in documentation). Review these ASCII printouts and annotate the hex printout with areas that are English intelligible. Now run DISASSEMBLER-II. Viola! Now you have it! Learn all about TRSDOS, BASIC, DEBUG or any other machine code program in RAM. All programs in the disassembler package can be initiated and/or terminated at any memory location (0000 - FFFF).

Documentation includes information concerning memory locations for printer parameters. You will learn how to initialize the printer from BASIC without the nuisance entries required by the TRSDOS FORMS command. In fact, this package provides a basic tool which could allow you to master your TRS-80, MODEL II. Package price—\$49.95. Personal checks, money orders or certified checks. No bank cards.

duced inconclusive results, as the error location moved or disappeared.

When the piggyback board was removed, the memory check results were fine. After exchanging chips and putting the piggyback chip set on the main board, another memory check also showed good results.

It was mysterious. The problem seemed to be similar to the memory problems some TRS-80 users were having with the 32K and 48K memory in the expansion interface. Will solved the problem by putting pull-up resistors on the memory output data lines and the address lines coming from multiplexers Z3 and Z4 in Fig. 8.

Will's original keyboard was taken from a key-punch machine and modified extensively. After much labor he abandoned the keyboard because its momentary contact switches would not work with a text editor or any application where a repeat function was required.

Will replaced it with a 63-key unencoded keyboard from Jameco. This keyboard, shown in Photo 2, has given excellent service so far, with few key-bounce problems.

Will modified the Jameco keyboard so that a blank key is used to disable the cassette remote control, rather than a separate switch on the console.

Video Display and Cassette I/O

The video display is a converted nine-inch Panasonic black and white TV set. Will stripped the TV set of all non-essential parts, such as the tuners, IF strips and demodulation circuits. He redesigned the video input circuit to improve the character definition and to accept the standard video signal coming from the computer. The resulting video is much sharper than the standard TRS-80 display.

Will's redesigned CSAVE/CLOAD circuits have been a boon for his friends who own

TRS-80s. Whenever one of us encounters a hard-to-load tape, we ask him to load it on his machine to make a new copy.

His home brew 80 can load tapes that none of the other machines will accept, and his output is exceptionally sharp. Will's cassette I/O circuit is shown in Fig. 2. Note the field effect transistor in the second op amp stage. This transistor automatically sets the amplifier gain, presenting a constant amplitude signal to the following stages.

The decoding circuit is built around the MC1458 rather than the LM 3900 used in the TRS-80. The LM 3900 proved to be unstable under high current conditions. When the last stage of the LM 3900 was saturated, it disrupted the operation of the first and second stages. The end result was a fluctuating, unstable signal.

Since Will did not like the location or operation of the reset switches on the TRS-80, he designed a system restart. It

performs the same function as the TRS-80 reset located in the expansion interface port. He added a separate system reset.

The reset function is a true system reset, similar to the TRS-80 power up reset. However, power is never removed from the system. The reset clears the memory and returns you to the MEMORY SIZE? or READY prompt.

Summary

I'm not recommending that everyone should build his own 80. Will drew on years of experience as a technician and invested hundreds of hours in his lab to get some of the circuits to operate correctly. In the process, he increased his knowledge and understanding of digital circuits and his friends learned more about their TRS-80s as the work progressed.

In the final analysis, Will's computer is not a TRS-80, but rather a TRS-80 compatible system, loosely based on the Radio Shack design. ■

Omikron's Mapper + NEWDOS/80 8" Drives for the TRS-80

NEWDOS/80 is Apparat's latest upgrade to NEWDOS. Features include variable length records, chaining, and drivers specifically configured for Omikron's MAPPER II. \$150.

MAPPER II adapts the TRS-80 to run both 5" and 8" drives. With NEWDOS/80, storage is increased to 300K per 8" drive. \$99 plus \$10 per cable connector.

MAPPER I adapts the TRS-80 to run the vast library of CP/M software as well as the TRS-80 software. All Lifeboat Software may be ordered for the MAPPER I. All MAPPER I CP/M software is compatible with the CP/M for the Model II. With MAPPER II and 8" drives, the Model I becomes disk compatible with the Model II.

Standard features include lower case support, serial and parallel printer drivers, and an addressable cursor. MAPPER I is supplied with complete utilities including a memory test, a disk test, a copy program, and a proprietary program for converting TRS-DOS files to CP/M files. \$199.

WORD PROCESSING—MAPPER I supports professional word processors like the Magic Wand and Word Star (see reviews in June 80 Kilobaud). Omikron's implementation includes a blinking cursor, auto repeat, shift lock, debouncing, and an input buffer that eliminates missed characters. Magic Wand super discount price \$299.

FIELD PROVEN DESIGNS—After one year of MAPPER production, Omikron has established an impeccable reputation for reliability, integrity, and user support. Omikron's customers include the US Government, major corporations, universities, medical doctors, and professionals in all fields.

SYSTEMS—Omikron sells complete systems featuring Model II compatible Shugart disk drives. Call for prices and delivery.

FOREIGN ORDERS must include full payment in US funds plus \$25 for air shipping and handling.

See reviews in July 80 and August 80 BYTE By Jerry Pournelle.

A close look at using arrays around the house.

Of Two Dimensional Arrays

R. L. Conheim
1329 Stanley Avenue
Dayton, OH 45404

When I opened my utility bill the other day, I wasn't prepared for a surprise. The previous month's weather was mild, so neither the furnace nor the air conditioner ran very much. Surprise was not exactly my reaction. Anger and frustration were more appropriate descriptions. The bill was three times as high as the previous month's.

By the time I calmed down, I realized that a previous meter reading had been grossly in error—in my favor—and my current bill was merely playing catch-up. Too bad I hadn't put my TRS-80 to use keeping track of those bills. I could have learned a lot.

Utility Bill Program

Necessity is also the mother of programs, to paraphrase an old saw, so I proceeded immediately to outline what I wanted a utility bill program to do.

Basically I wanted comparisons: this month with last, this year with last, accumulated year-to-date information about

both units of energy and cost, a monthly cost-per-unit comparison so I could see what was happening to rates.

This kind of information could also give me an idea of how well my conservation efforts were working. Did insulating the basement really do anything economically sound? And, when I went around the house turning off lights, was I really accomplishing anything more than annoying the rest of the family?

I also wanted to develop a basic array which I could use for a variety of things. The program which resulted was a straightforward exercise in BASIC, except for a few sallies into uncharted waters. Among these you're-on-your-own objectives were: to include calculated data along with input data in the array, print a single column or a single row and line up data which varied in length so the array would be easy to read.

While I was about it, I investigated mixing string with numeric data. This turned out to be sticky, and required more experimentation than any of the other areas of investigation. None of my books gave much information on these areas, but reason, patience and dumb luck pointed the way.

I needed a couple of two-di-

Example 2. Comparison of a Single Month

mensional arrays—one for the current year's information and one for the previous year. The string arrays which defined the names of the months were integrated with their numeric counterparts. By using a menu I could choose between entering new data or examining the arrays. Additionally, at the end of the array printing, I could make provisions for comparing any given current month with its previous year counterpart, showing unit and percentage differences.

Using data statements and reading them into the program turned out to be the best method of feeding information to the arrays, because data statements became part of the program and were retained by it.

The string array for the names of the months caused several headaches. It wound up inside the numeric array printing loop (lines 520 through 570). Every time I tried to separate the string from the numeric arrays, I got a syntax error where no error seemed to exist. Using the TRON technique of tracing the progress of a program, I determined that the error was caused when the program attempted to read data that wasn't there.

The numeric arrays were slightly unusual in that only two of the five columns were input to the program. The other three were calculated. That meant reading only two columns of numeric data, but printing five. The last three columns were calculated for the current year's array in lines 580 through 600 and 630 through 650. I identified both the input data and the calculated data by X-Y coordinates. The rows comprised the X axis and the columns made up the Y axis. So, for printing you could identify any data item by row and column. Identify a single row or identify a single column.

When I first experimented with this program I did not have data for some months of the previous year. To keep the arrays working properly, I entered zeros as data. This caused a further problem in calculating the cost per unit column because the program attempted to divide by zero—a no-no which caused a /0 error. To keep this error from

gumming up the works I included an ON ERROR GOTO statement at line 100.

It is best to leave this statement out until you have debugged the program because with it, any type of error will cause the program to jump immediately to READY.

A Closer Look

Lines 240 through 280 provide instructions for inputting data to the program. The line number to be used, and the order in which data is to be typed is provided by these instructions. The program then reverts back to the menu. If you then select "2," you will get a readout of both arrays and, should you want it, a comparison of like months in the two years.

Lines 300 and 310 print the table headings. Data for the current year is entered in lines 380 through 490. Note that data is provided in our example for only January and February of the current year. We have reserved lines 400 through 490 for ensuing months. This is not essential unless you plan to use a renumbering program. The simplest way of reserving these lines is with the apostrophe, the abbreviation for REM.

Line 360 for the numeric array and line 550 for the string array keep execution in order when all data is not available for the entire year.

The printing program for the first array (the current year) starts on line 500 and continues through line 670. The statement in line 610 now calls for five columns, not just the two we read. This handles the printing of the calculated numeric data. The continuation statement in line 710 stops the display after the first array, if you are displaying rather than printing. For printing, you won't need this line.

To keep the columns left-justified TAB(X) is used in line 660. The value of X is set by line 510 and altered in line 620. Each time a column is printed, ten is added to the value of X.

The second array is set up and printed in lines 740 through 1080. The monthly comparisons are programmed in lines 1100 through 1500. Note that a month

Guild

identifier, N, (1350 and 1450) is required to compute the data. When item 2 of the menu is selected, there is no request for a month, so N is inserted in 1300. The month to be compared is determined by 1280 through 1300.

It is possible, of course to select a month for which there is no current data. To handle that situation the latest month for which there is data is identified in line 690. If the month selected is more than that, line 1290 prints out a not-available statement (line 1520).

When a month has been selected for comparison, the data is printed. This is done in lines 1330 through 1500, after restoring the read capability in line 1270. After the data have been printed, comparisons are made in lines 1100 through 1220. The

absolute values (ABS) are compared to prevent any printout of minus signs.

Other Applications

The arrays set up in this program can be used for electricity, gas, or water with no change other than writing line 120 to suit the application. In the printed headings we have used general terms such as units rather than KWH or CuFt.

You can also use the two-dimensional arrays for keeping track of income tax deductions, medical costs, insurance payments, or breakdowns of the household budget.

One final word. In order to retain new data as you add data statements, don't forget to CSAVE the entire program after each group of inputs. ■

TRS-80***MULTI-TASKING OPERATING SYSTEM***TRS-80^(R)

TRUE TIMESHARING WITHIN A TRS — 80

ADDS A NEW DIMENSION TO YOUR MODEL I SYSTEM

The first system utility to allow TWO USERS or programs to operate independently in a TRS-80.

• • • • •

- TSHARE V 1.2 is an interrupt driven executive which patches itself to NEWDOS or TRSDOS.
- Allows TRS-80 to be interfaced to a second terminal thus providing for an additional operating user in your EXPANDED SYSTEM. Additionally, a printer can be used to service both users.
- SIMPLEX mode for non serial-port users. Requires only a printer as the second "screen". Jobs share the keyboard under user control and detach to run separately but simultaneously. This mode allows non — interrupt driven timesharing.
- CONFIGURE allows segmenting of available memory above 7600 HEX in any proportion between the two users. Selects communication mode and port type for second terminal.
- Options for parallel port, RS232, TRS232, and HUH as the connection for your second terminal. All software drivers are included.
- Communicate between USERS or PROGRAMS using peek and poke. The experienced programmer can now create a new generation of multi — terminal operated games or business software.
- Execute BASIC or MACHINE LANGUAGE. Full use of disks. Requires 32K plus one disk drive.

The Micromatic 80, a step ahead for your TRS-80™ and other microprocessors.

The Micromatic 80 is a TTL based Interface unit designed to integrate the popular Radio Shack TRS-80®, and many other processors with parallel Centronics™ compatible output, to the IBM manufactured Selectric™ terminal.

- Used IBM Selectric terminals are cleaned and functionally checked before shipping.
- 90 day warranty on interface only.
- No software required.
- \$795. plus \$25. for packing and handling.
- TRS-80 to Centronics cable \$29.00.
- Mail or phone orders accepted.
- Certified Check, Money Order.

PROgrammer for programmers

Level II Basic is great, but it can be better — with PROgrammer. This utility package includes:

- Renumber
- Pack
- Append
- Move

and more! Take the drudgery out of writing programs, and give your programs the professional look without hours of extra effort — with PROgrammer.

PROgrammer is available on cassette for \$25. Specify a 16, 32, or 48 K version when ordering. California residents add 6% sales tax.

ALSO AVAILABLE: Merge, copy, and identify your system tapes with the **System Tape Utility**. Displays the file name, low address, high address, length, and entry point for each tape. \$12 on cassette. ✓ 241

NEWDOS/80[®]

DOUBLE-ZAP/II

Unleash your **NEWDOS/80*** power into double density!

Double-Zap is a disk program which zaps **NEWDOS/80*** for double density operation when used in conjunction with the **PERCOM DOUBLER**™.

Double-Zap will completely zap on a one or two drive diskette, it will run single and double density, mix and match.

After Double-Zap has run, you will get an extra 64,000 + bytes on the original diskette including the original programs from **NEWDOS/80***.

Double-Zap will read any single density **TRSDOS***, **NEWDOS*** or **VTOS** files and convert them to double density. Double-Zap is the **ONLY** double density conversion for **NEWDOS/80*** authorized by **PERCOM DATA** to be used with the **PERCOM DOUBLER**™. Requires 32k RAM \$49.95

Apparat, Inc.
introduces

NEWDOS 80

For the 80's —
an enhanced NEWDOS
for your TRS-80™
Model 1.

Apparat, Inc., announces the most powerful Disk Operating System for the TRS-80®. It has been designed for the sophisticated user and professional programmer who demands the ultimate in disk operating systems.

NEWDOS/80 is not meant to replace the present version of NEWDOS 2.1 which satisfies most users, but is a carefully planned upward enhancement, which significantly extends NEWDOS 2.1's capabilities. This new member to the Apparat NEWDOS' family is upward compatible with present NEWDOS 2.1 and is supplied on Diskette, complete with enhanced NEWDOS + utility programs and documentation. Some of the NEWDOS/80 features are:

- New BASIC commands that supports files with variable record lengths up to 4095 Bytes long.
- Mix or match disk drives. Supports any track count from 18 to 80. Use

35, 40 or 77 track 5" mini disks drives or 8" disk drives, or any combination.

- A security boot-up for BASIC or machine code application programs. User never sees "DOS READY" or ">READY" and is unable to "BREAK", clear screen, or issue any direct BASIC statement including "LIST".
- New editing commands that allow program lines to be deleted from one location and moved to another or to allow the duplication of a program line with the deletion of the original.
- Enhanced and improved RENUMBER that allows relocation of subroutines.
- Powerful chaining commands.
- Print Spooler.
- DFG function: simultaneous striking of the D, F and G keys will allow the user to enter a mini-DOS to perform some DOS commands without disturbing the resident program. (a.g. dir while in scripsit.)

- Upward compatible with NEWDOS 2.1 and TRSDOS 2.3.
- Includes machine language Superzap/80 and all Apparat 2.1 utilities.
- Enter debug any time by pressing 123 keys. Also allows disk I/O.
- Diskette "Purge" command.
- Specifiable system options (limited sysgen type commands).
- Increased directory capacity.
- Copy by file commands.

NEWDOS/80 with all of the NEWDOS + utility programs, many of which have been enhanced, is priced at just \$149.00 and is available at most TRS-80 dealers.

As with 2.1, NEWDOS/80 relies on the TRSDOS and Disk Basic Reference Manual published by Radio Shack. NEWDOS/80 documentation supports its enhancements and upgrades only.

Sound exercises in machine code.

Cheap Trills with T-BUG

Allan S. Joffe
1005 Twining Road
Dresher, PA 19025

This time around our programming exploration delves into some loop structures and explains a means of producing tones on your TRS-80.

Every time you CSAVE your 80 is recording tones on its cassette. The means to this end is a four-bit latch in the computer, accessed via the A register.

If you turn the correct bit of this latch on and off at an audio rate, you can produce a tone. You cannot simply turn this bit on and off, but rather, you have to turn it on and hold it on for a time, and then turn it off and hold it off for a time. If you didn't do this, the tone would be inaudible.

Two Loops

The time delay requires a loop; in actuality, two: a turn-on loop, and a turn-off loop. These are located in Program Listing 1 with the five bytes starting at 4A04. A similar loop starts at 4A0D. Each of these loops

which use the D register controls the on and off latch time through the A register latching which follow them.

There is yet another loop in the program that controls just how many times the program will pass by the two loops that we have already examined. This loop uses the BC register pair and starts at location 4A00 extending to 4A03.

It is this BASIC program that originally called this machine language routine by means of the USR(0) function.

Let's examine this machine language routine more closely. Consider a point that is easy to forget. The 01 opcode at origin 4A00 means LOAD register pair BC nn. This means that the register pair is loaded in memory locations 4A01 and 4A02. The

tures of T-BUG is the break point, and we can use this to examine the matter at hand.

If we assume that the first three bytes of the program are 01 FF AA, let us set a break point at 4A03. Now, execute a J 4A00 and when the prompt sign returns to the screen, utilize the R function of T-BUG to examine the BC register pair contents. You will see that AA is indeed loaded into the B register, and FF is loaded into the C register. Now execute an F instruction to reinstate the program before going on.

What is all this leading up to? If memory location 4A16 contains a B1 instruction (OR C), we get a short burst of tone as the LOOP terminates when C register has been decremented to zero.

Remember, this C register contains the least significant bit contained in the register pair BC. Had you changed the contents of 4A16 to B0 (which is the instruction to OR B) and then ran the program, you would get a much longer tone burst, because the B register contains the most significant bit of the register pair BC.

Now, run the original listing with location 4A16 containing

*"There is yet another loop
in the program that controls just how
many times the program will pass by
the two loops . . . already examined."*

Starting with location 4A16, this loop is tested for a zero condition to see if the count in the BC register has been fully decremented. If this is not the case, then the program returns to location 4A03 and continues decrementing the contents of the BC register pair.

When this count has been reduced to zero, the program falls through to 4A1B which returns to the BASIC auxiliary program.

value in 4A01 is loaded into the C register and represents the least significant bit. The value in 4A02 is loaded into the B register and represents the most significant bit.

(This business of the apparently backwards process of an instruction saying LOAD BC, and then actually loading CB can lead to confusion later on in the program.)

One of the most valuable fea-

the B1 (OR C) opcode. You will hear a short tone. If you examine the BC register contents, you will see that the C register has been decremented to zero, but that the B register still contains AA.

Now, change the contents of 4A18 to B0 (OR B) and run the program. You will get a much longer tone, and when the prompt appears, if you examine the BC register, you will see that the B register is now zero and the C register still contains FF.

If you want to get the last millisecond of time out of the loop, change the contents of location 4A17 to B0 (OR B) and then add the remaining bytes in order, just as they existed in the original program. This puts all these bytes into locations one removed from the original. If you put a break point at location 4A1B and run the program, you will see that both registers, B and C, are now decremented to zero.

If you timed this longest loop, you would get a value of about nineteen seconds. If you changed the contents of loca-

tion 4A17 to 00 (NO OP) and ran the program again, you would get a time only about one half-second shorter than this, clearly showing that the value in the C register is truly the least significant portion of the register pair.

The Metronome

At this point let us combine the machine language routine with a BASIC program to test it out. Naturally, you will need a monitor program such as T-BUG. Load your monitor program using the SYSTEM command as usual. Then load Program Listing 1, starting at location 4A00.

With your monitor program, change locations 408E and 408F to 00 4A respectively. This is necessary to make the USR(0) function work, as outlined in your Level II book. Next, execute a J 1A19 to return to BASIC. Now load in the following short BASIC listing.

```
10 FOR X = 1 TO 60
20 J = USR(0)
30 FOR T = 1 TO 300: NEXT T
40 NEXT X
```

Origin or starting memory location is 4A00 hex

THE BOOK

ACCESSING THE TRS-80® ROM

If you ever do
Assembly
language
programming,
or you just want
to know more
about your
TRS-80 ROM,
"THE BOOK"
is for you.

Volume I will give you access to over fifty machine language subroutines in the Radio Shack Level II BASIC. It includes information on the numeric data formats and a commented listing of the ROM routines.

"THE BOOK, Volume I", encompasses all arithmetic functions and mathematical operations. There are separate routines for integers, single precision, and double precision numbers and the data format for each of these number types is explained. The routines that perform ASCII to binary and binary to ASCII conversion are identified and explained to provide you a means of data I/O.

A fully commented listing provides the details on the step-by-step execution of these ROM routines. Although a complete disassembly is not provided in order to avoid copyright infringement, you can obtain a complete disassembly using the disassembler program listed in "THE BOOK." Volume I also includes a complete, detailed memory map of the entire machine and a symbol table noting over 500 addresses.

"THE BOOK" will save you hour upon hour of assembler program development time. Don't start programming without it.

Order your copy of "THE BOOK", today!

779 UPPER CASE/lower case "Conversion Kit I"

Expand the capabilities of your 779 line printer to include word processing!! Available to all Centronics 779 and TRS 80 Printer I owners is the option of lower case and changing slash 0 Zero to standard O. No etch cuts or soldering needed. Installs in minutes with a screwdriver. No program modification or additional interface is required.

Price \$125.00

UPPER/LOWER CASE NOW AVAILABLE FOR THE FOLLOWING CENTRONICS PRINTERS:

101AL, 102BL, 306, 500, 501, 503, 700, 701, 702, 703, 780, 781.

Motor Control "CONVERSION KIT II"

FOR ALL CENTRONICS 779 & TRS 80 PRINTER I LINE PRINTERS!! Our "Conversion Kit II" Motor Controller gives your 779 the ability to turn the motor on and off automatically. Removes the annoying noise of constant run, increasing the life span of your 779 and TRS 80 line printer motor! No soldering, software or hardware changes needed. Installs easily.

Price \$95.00

SAVE! Buy Service Technologies "Conversion Kit I" and "Conversion Kit II" together for the single price of **\$199.00**

To order, please send check or money order in the proper amount to:

Visa and MasterCard accepted (please include signature, expiration date and phone number).

At this juncture, the transmitted audio has to be amplified by way of the cord that normally goes to the input jack of your cassette recorder. On my tape machine (a CTR-41), this is the jack marked AUX. Remove the plug from this jack and put it into an amplifier of your choice.

Run the program and you will hear a series of medium frequency beeps, spaced about one second apart. After 60 beeps the program will stop and a READY will appear on your monitor. You now have a metronome, by daring to adventure into USR(0) and machine language.

At this point return to T-BUG using the SYSTEM command. You may have to use /17280 after entering SYSTEM to successfully return to T-BUG. If you try the normal /ENTER and get back to the MEMORY SIZE? power up condition this is the case. If this happens, your BASIC program will be gone and you will have to reset memory locations 408E and 408F, but T-BUG will still be present in memory.

The purpose of returning to T-BUG is to try the longer loop time, as previously indicated, by changing the instruction at location 4A16 from B1 to B0.

Now, return to BASIC, and run the same program that gave you your metronome. This time each tone burst will last for some 19 seconds, as you have accessed a much longer count.

For the next little demonstration return to T-BUG (by now this is becoming second nature), and change location 4A16 back to the original B1 instruction. Return to BASIC and load the following BASIC listing.

```
10 FOR X = 1 TO 60
20 J = USR(0)
30 G = 90-G
40 PRINT (a) 60,G
50 POKE 18949,G
60 POKE 18958,G
70 NEXT X
```

Now run this program and you will hear a sort of tweedle-dum, tweedle-dee effect similar to a European police siren.

A few words of explanation: The two locations being POKEd alternately with the values displayed at the top right of your monitor are locations 4A05 and

4A0E which happen to be the locations that contain the initial count in the O register. By using the POKE statements we are changing the count to be decremented in the D register.

We are also changing the length of time the cassette output port is being held on and off, and this causes the frequency of the tone to change.

Try these line changes. Change line 10 to read: 10 FOR X = 1 TO 45. Change line 30 to read: 30 G = G + 1.

Now, run the program, and you have a descending trill. If you wish to slow down the speed of the trill, merely insert a small time loop such as 55 FOR T = 1 to 25:NEXT T.

Higher Frequency

You have probably noticed that the lower the count that is initially POKEd into the O register, the higher the resulting frequency; and the higher the count initially in the D register, the lower the frequency produced.

If you'd like to try for ascending trill, try this.

```
10 FOR X = 1 TO 50
20 J = USR(0)
30 R = R + 1
40 G = 51 - R
50 POKE 18949,G
60 POKE 18958,G
70 NEXT X
```

A modest exercise in your basic programming skills might combine the ascending and descending trills and tie them into a repeating loop, so that when it is executed, your TRS-80 will give the resident canary a run for its birdseed.

Before we leave the arena, locations 4A08 and 4A11 (FD) in Program Listing 1 are of some interest. These are instructions couched in two's complement notation to return the O register, thus insuring that the program will indeed LOOP until the O register is decremented to zero.

If you consider the first D register loop which extends to location 4A08, for the loop to turn upon itself and decrement it must go back from location 4A08 to location 4A06, which, inclusively, is three steps back. It just so happens that FD is the two's complement form for minus three. ■

TBS KEEPS ON DOING IT!

The Bottom Shelf - A proud new tradition!

The fine quality software of The Bottom Shelf including its defined fields, editing features and blinking cursor off the Model I Radio Shack microcomputer has been established. Now it is time for the new. With the introduction of the Mod II, TBS went to work learning its secrets. This month will mark the introduction of major advances in business and database software for all Radio Shack computers - Mods I to III and even the little pocket computer. As this is being written, most titles are not known, but see your computer dealer or write for a catalog - all titles released are available at that time.

The one known title is *MEGAMAIL*. This is the beginning of truly usable business software for micro computers. To date programming has been hard to operate in order to work within the constraints imposed by microcomputers. Sophisticated software that is easy to use, it is a mailing system that will handle one million name lists or 8,000 name lists without skilled operators. Multi computer entry is supported. Write for details.

P. O. BOX 49104 • ATLANTA, GA. 30359

*Here are three (count 'em)
new commands for this program saving utility.*

T-BUG And Then Some

Mark Paxton
17903 Red Oaks Dr.
Utica, MI 48087

COMMAND	DESCRIPTION
C	Clear entire screen.
D aaaa	Dump 208 bytes of memory (with ASCII code) on screen, where aaaa is the beginning address.
S aaaa bbbb cccc	Shift (or move) memory contents from address aaaa to address bbbb for a length of cccc.

Have you ever wished for a command in T-BUG that wasn't there: like displaying an entire block of memory on the screen with one command, dumping memory with the ASCII codes, a clear screen command, or a command to move a block of memory from point A to point B?

This article shows you how to modify Level II T-BUG to add three new commands, plus where to insert the logic for your own commands.

New Commands

The format for the three additional commands is displayed in Example 1.

Example 1.

C Clear Command: To clear the screen, enter a C and the screen clears with the # symbol homed to (0,0), or 3C00H.

D Dump Memory Command: This command displays the contents of memory (in hex) for a given address. While T-Bug's M command examines one byte at a time, the D command displays 208 bytes of memory on the screen, along with each byte's ASCII code (where appropriate). Example 2 shows a sample.

Each line displays 16 bytes (or 10H bytes) of memory, with a space between every fourth byte

on the line. On the right hand side of the display, between the two asterisks, are the ASCII codes for each of the 16 bytes in the corresponding line. Any time a non-printable character is encountered a period is put in place of the ASCII character.

If something less than 208 bytes on the screen at the same time is desired (i.e., 13 lines of 16 bytes each), you can easily modify the dump routine to handle this.

S Shift (or Move) Command: This command allows you to move a block of memory from

one starting address to another.

The routine can even handle moves where the block of memory being moved from overlaps the block of memory being moved to. This is done by starting the move at the last byte in each block and decrementing, when moving a block up in memory, or by starting the move at the first byte in each block and incrementing, when moving a block down in memory. When blocks overlap, and the from address is less than the to address, you must start the move at the last byte in each block and decrement to the first byte. If you start at the first byte and increment, you will begin to destroy your original (from) block before it is safely moved to its new destination.

Program Listing 1 shows the source code for the additional commands. Use an editor/assembler or T-BUG itself to enter the machine code from the listing. If you have an editor/assembler, follow the steps below. (Substituting T-BUG should present no real problem, short of bleary-eyed boredom.)

Enter the Listing

Step 1: Enter the source code in Listing 1 into the editor/assembler. Create a System Tape and save the source code on tape too. Note that the ORG statement is at 4A00H. This starts the additional code after T-BUG ends.

Step 2: Load T-BUG.

COMMAND ENTERED TO GET THE ABOVE SCREEN: D 18B0

Example 2.

Software for PMC-80 & TRS-80* Mod I From SOFT SECTOR MARKETING, INC.

SPACE COLONY © 1980 Kim Watt, 4K, L2

Available two ways:

- 1) for the PROGRAMMA high resolution graphic board. This version has the best graphics of any "Space Invaders" type game on the market today. (Requires the PROGRAMMA high resolution graphic board from PROGRAMMA).
- 2) for the standard TRS type graphics. The graphics are not as good, but still a good game.

Note: Both have sound and are \$9.95 each (mail only)
Both on some tape \$14.95 (also in local stores)

MONSTER'S LAIR © 1980 A. Meir

The game is loosely based upon a well-known fantasy role playing game called Dungeons & Dragons. While it is not a strict interpretation of the rules, a D & D player will notice many similarities in the concept. Other game players may find the capability of adapting their characters to the game. The object of the game is to kill all monsters encountered and gain their treasures.

This program uses a full 16K of free memory (16K cass - 32K disk)
cassette \$14.95 disk \$19.95

Utilities

NUFORMAT permits formatting a diskette with any number of track works under any D.O.S. (by K. Watt) \$9.95

NUPURGE Keep your diskettes clear of unwanted clutter easily. Removes all traces of programs while letting you select how much or how little (by K. Watt) only \$19.95
both programs on one disk for only \$28.00

Lower Case Driver self relocating UI or DOS \$7.95

Operating Systems

80 Track TRS DOS (for 80 Track MPI Only) \$39.95
Comes on an Original TRS 2.3 DOS

NEWDOS 80 \$139.00

VTDOS 4.0 \$89.00

SSM DOS 1.23435 (This operating system is the author's first and last attempt at writing an operating system. It has listed all of the commands that you would expect in an operating system but they don't work as you would really want). Really, this is a spoof on operating system and is really good. It is something for a programmer to take apart and see how a system works. (if you don't like it erase the diskette))

Note: This program is a novelty only \$9.95 with the diskette

TRS SUPER INVADERS

The last and greatest writing of Larry Ashmun. © Soft Sector Marketing, Inc. 1980.
Requires 32K Disk.

The program has "Stereo Sound" and 10 levels of play. We have been told by people who have seen the program that it will set the standards for all invaders type games.
Disk Only \$24.95

Other Games

Matchbook Football w/sound 16K L2 \$9.95

Shark Attack 16K L2 \$7.95

Adventure by Scott Adams 1-10 16K L2 cass ed. \$14.95

Capture/Symon both on one tape 16K L2 cass. \$12.95

Thesis a series of 5 educational games for children on one tape.
Requires 16K of free memory disk or cass \$25.00

Prepay any three items at one time and receive a 10% discount on software or hardware in this ad. (Mail Order Only)

Victor Andrews "The Boss"

Step 3: Load the new System Tape.

Step 4: The next step is kind of cute. We have to modify T-BUG itself by using T-BUG. T-BUG must be able to branch into our new code.

In T-BUG, the code between 43E5H and 4408H is checking for keyboard input of one of the T-BUG commands: F,B,M,J,R,G,P or L. At 43E5H, the code is checking for an F, and branches to 480DH if an F was entered:

```
# M 43E5 FE C3
43E6 48 06
43E7 CA 4A
43E8 0D 00
43E9 48 00
#
```

Example 3.

```
43E5 FE46 CP 'F'
43E7 CA0D48 JP Z,480DH
```

This code should be replaced with an unconditional branch to our new code, as below:

```
43E5 C3064A JP 4A06H
43E8 00 NOP
43E9 00 NOP
```

To actually accomplish this, use the M command, as shown in Example 3. Be careful to get it right the first time. If you mess up before you finish entering C3064A, you will hang T-BUG up and have to reload it.

You might want to check address 4A06H to make sure the new code got there safely, before you alter T-BUG at 43E5H and go branching uncondi-

tionally into the hinterlands.

Step 5: Test all of the T-BUG commands. Once you have a good version of T-BUG +, then save it to tape with the P command:

```
P 4380 4B90 4380 T BUG
```

That's all there is.

To add your own commands is easy. Insert the comparas and branches at line 240 in the same manner. Use the following T-BUG subroutines to save space:

4532H: Displays the contents of the A register at the current screen position. (The current screen address is stored in 483DH - 483EH.)

4589H: Retrieves two ASCII digits from the keyboard, displays them on the screen, using the current screen address as in the above routine, and returns the hex value in the A register.

One additional benefit from these routines is that the D and S command can be terminated in the same manner as the J command, by entering an X.

The final touch you might want to add is to literally put the + in your new T-BUG. That is, change the # symbol to a + symbol.

Locations 43DDH-43DEH load the A register with 23H (or #). To change the symbol, alter location 43DEH to contain 2BH (or +). ■

ORDERING INFORMATION:

We ship the same day we receive a certified check or money order. Texas residents add 5% sales tax. Write for our CATALOG of many parts, terminals, printers, etc. All items subject to availability. Your money returned if we are out of stock. Mail order hours 9-4 Monday-Thursday. Closed Fridays.

SHIPPING INFORMATION:

Modems: \$3.00 each; Key Boards \$4.00; Power Supply \$7.00.
Large Items & Parts: Specify Freight or Air Freight Collect.
Foreign Orders: Add appropriate freight or postage.
We now take Master Charge and Visa orders. Specify full number, bank number and expiration date.

DOES YOUR TRS-80 • DESERVE THE VERY BEST SOFTWARE?

EDUCATIONAL

MATH-PAK-1 • **MATH-PAK-2** • Interactive math drill programs. Enter answers digit by digit, just like paper and pencil. With user selected difficulty levels, remainders, carryovers, reducing, simplification, games as rewards, scoring, and more. Order MATH-PAK-1 for whole numbers, MATH-PAK-2 for fractions. \$14.95 ea (L2-19K)

BUSINESS

H-O-R-K-S • Low cost, single entry accounting system that works. Has 66 user assigned account codes, auto audit trail, search with totals, 32 or 48K, 1 to 4 drives, credit and debit summaries with 3 formats, up to \$200 complete entries, plus 8 pages of documentation. (32K-1 disc minimum) \$24.95/cassette \$29.95/disc

INVENTORY+ • Why settle for just an inventory listing? Get aging reports with 2 options, reorder reports, total listings with purchase dates and amounts, total cost of inventory, items sold, profit margins, and more. Do day to day updates, delete items, change items, and pack files; with printer routines and documentation. (32K-1 disc minimum) \$24.95/cassette \$29.95/disc

CASH REGISTER 80 • Use your TRS-80* as a point of sale terminal with auto inventory lookup, auto pricing, auto inventory update, discount pricing, automatic taxing, print sales slip with user adjusted formats, and of day reports with all cash, charge, and check sales by salesperson. **CASH REGISTER 80** requires **INVENTORY+**, 48K, and 1 disc minimum (2 discs recommended). \$24.95/cassette \$29.95/disc

INTEGRATED UTILITY PACKAGE

"Very powerful, underpriced, a must buy!"

Marcia Kalish, OCTUG Newsletter, May, 1980

"Keyplus is terrific... an incredible program."

James Joachim, North Hollywood, CA.

"Thank you for your fantastic utility program."

Mark C. Wehmhoefer, Chicago, IL.

"Makes the TRS-80 that much more versatile."

Carl Pawl, Santa Monica, CA.

Keyplus is a powerful collection of utilities for the TRS-80. Routines can be enabled whenever the TRS-80 accesses the keyboard. A partial list of utilities includes:

AUTO REPEAT—Allows you to repeat a key simply by holding the key down. This is a must when editing BASIC programs.

LOWERCASE VIDEO—If your TRS-80 has a hardware modification installed for lowercase video, Keyplus will add the software needed to make it work.

BASIC SHORTHAND—Keyplus generates BASIC key words (GOSUB, INPUT, STEP, etc.) in a single key stroke. You have the option of having Keyplus print trailing blanks when practical, adding to the appearance of the listing.

RESTORE LOST BASIC PROGRAM—Ever NEW a program on-ly to realize you did not record it? Two key strokes and you've got it back!

LOWERCASE WITHOUT SHIFT—Keyplus lets you generate lowercase from the keyboard without depressing the SHIFT key.

DIRECT KEYBOARD ENTRY OF GRAPHICS—Type graphic strings directly from the keyboard. This is the easy way to create BASIC programs with super fast graphics.

USER DEFINABLE STRINGS—Two user definable strings up to 32 characters long can be generated in a single key stroke. With this feature redundant input does not have to be retyped.

KEYBOARD DEBOUNCE—(LV. II, 16K version only) Keyplus cures debounce problems completely.

AUTO INPUT—(Disk version only) Allows you to define a string, save the string onto disk, and then recall the string, fooling the computer into thinking the string is being typed from keyboard. This is extremely powerful. For example, you can enter BASIC, set memory size, reserve file buffers, turn off interrupts, run a program, respond to questions asked by the program, etc., automatically from power up or from the DOS READY prompt.

SAVE KEYPLUS—(Disk version only) You can use this routine to allow Keyplus to be initialized with any combination of routines enabled or disabled. In addition, your user definable strings can be saved to disk!

Disk Keyplus comes on cassette with both the 32K and 48K versions recorded twice. The documentation gives detailed information on loading Keyplus to diskette.

TRS-80 is a registered trade mark of Tandy Corp.

Here is a system-level software patch for 80's with sensitive ears.

Up and Down

M. Parris
646 Island Park Drive
Ottawa, Ontario
Canada K1Y 0B7

TRS-80 Laval II system) cleanly onto a new cassette, and so eliminate all of that fumbling around with volume levels. The program simply loads (from the DATA statement) two short machine routines.

You call the first routine by typing R; it fills an 8K buffer from the cassette input, an adequate size for practically any tape that might be encountered.

The second is called by typing W; it dumps this buffer onto a new tape. The first ten bytes are written slowly, which allows time for the eventual loader program to organize itself.

The program is written for a 16K system and an 8K buffer, but you can adapt it for a 4K system or a larger/smaller buffer. For example, changing DATA items 6 and 35 from 32 to 4 will provide a 1K rather than an

8K buffer, which speeds up the processing of small tapes. I've provided Listing 2 for more ex-

planative changes.

Note that no checksum determination is made. ■

The TRS-80 has an annoying feature—its sensitivity to input volume. While you can re-record a BASIC program into an acceptable volume level, this cannot be done with machine language tapes.

The short BASIC program in Listing 1 lets you rerecord any 500 baud A5 tape (as used in the

See ever-changing patterns in 500 bytes.

The Random Walker

John F. Strazzerino
150 Dundee Dr.
South S.F., CA 94080

This amusing Level II program uses TRS-80 graphics to draw an ever-changing pattern before your eyes. After a specified amount of time, the screen is erased and a new pattern is drawn, with different starting points and spacing between points.

The main coordinates X and Y are chosen. The spaces between the dots for the X and Y coordinates are called X1 and Y1. The X coordinate is checked to see if it's an even multiple of X1. If not, 1 is subtracted from X until X is an even multiple of X1. The same is done for the Y coordinate.

The point at the screen location specified by (X,Y) is lit. A random number is chosen and, depending on its value, one of four directions, right, left, down or up, is chosen, and the appropriate coordinate is altered. If the resulting movement is the lighting of a point outside the range of the TRS-80 screen, a new starting point is chosen, and the process begins again. The above rules apply once for each iteration of the program loop in line 1500.

The logic is simple and there are many ways to alter it. For example, add the line shown in Example 1, and the number of iterations will be shown in the lower right-hand side of the screen. The code in Example 2 resets the point if it is lit and sets the point if it is not lit. Example 3 contains BASIC statements to

list the X and Y increments used. Example 4 gives a way to start a drawing over before the loop in line 1500 has completed.

Even though multiple BASIC statements per line are not used, the program still takes less than 500 bytes. It is also easily convertible into Level I BASIC. ■

3150 PRINT @1017 Z%

Example 1.

3050 IF POINT(X,Y) THEN RESET(X,Y):
GOTO 3200

Example 2.

1450 PRINT @970,"X INCREMENT = ",X1:
1475 PRINT @990,"Y INCREMENT = ",Y1:

Example 3.

1550 Y\$ = INKEY\$
1560 IF Y\$ = "" THEN 1600
1570 GOTO 1100

Example 4.

```
1100 CLS
1200 RANDOM
1300 Y1=RND(2)
1400 X1=RND(3)
1500 FOR Z%=1 TO 500
1600 IF Z%<>1 THEN 2500
1700 X=RND(127)
1800 Y=RND(47)
1900 IF X/X1 = INT(X/X1) THEN 2200
2000 X=X-1
2100 GOTO 1900
2200 IF Y/Y1 = INT(Y/Y1) THEN 3100
2300 Y=Y-1
2400 GOTO 2200
2500 ON RND(4) GOTO 2600 ,2700 ,2800 ,2900
2600 X=X+X1:GOTO 3000
2700 X=X-X1:GOTO 3000
2800 Y=Y+Y1:GOTO 3000
2900 Y=Y-Y1:GOTO 3000
3000 IF X<0 OR X<0 OR X>127 OR Y>47 THEN 1700
3100 SET (X,Y)
3200 NEXT Z%
3300 GOTO 1100
```

Program Listing 1.

See how to format your *Quick Printer's* output to effectively display video graphics.

The Long and The Short of It

Albert C. Bole, Jr.
224 Jupiter Drive
WSMR, NM 88002

The TRS-80 Quick Printer is a versatile little machine—but it lacks an inherent capability to print graphics displayed on the TRS-80 video monitor. Moreover, the narrow width of the Quick Printer paper may seem to be a

bar to reproducing graphics.

The following program shows you how to print graphics that result in a better graph than the one displayed.

Two equations will be used on the TRS-80 video monitor to illustrate the program:

$$\begin{aligned} x^3/350 - x^2/50 - 10x/7 &= y \\ \text{and} \\ 38x/127 &= y. \end{aligned}$$

They will show you three elements of graphic display: curves, near-vertical lines and near-horizontal lines.

Two Problems

There are two problems associated with representing graphics on the Quick Printer: scaling, and the step-like blocks that represent lines at an angle on the TRS-80 video monitor.

Let's take a look at the scaling problem first. Fig. 1 shows the way the curves would look if they were graphed with one unit on the horizontal axis having the same length as one unit on the vertical axis—pretty much the same way we learned in algebra or analytic geometry.

The scale on the TRS-80 video monitor is about two units on the horizontal scale equal to one unit on the vertical scale. Fig. 2 shows how the curves would look on the video monitor. Note that the curves are compressed on the vertical axis. Nothing is wrong in that, but it gives a different appearance than what we are used to, and can make the graph more difficult to read.

In the November 1979 issue of the *Radio Shack Microcomputer Newsletter*, a program to print graphics on the Quick Printer is listed. The program uses the

Fig. 1. Conventional Graph

Fig. 2. Graph on TRS-80 Video Monitor.

Adapter for TRS-80* computer eliminates disk read errors

Garland, Texas — Harold Mauch, president of Percom Data Company, announced that the company is marketing a simple plug-in adapter for TRS-80* computers that corrects a design deficiency in the disk controller circuit.

The problem, which causes disk read errors, has been traced to Tandy's reliance on a circuit internal to the FD1771 controller IC to perform the function of separating clock and data pulses.

As explained in the *Background*, use of the internal chip circuit for reliable data-clock separation is a design shortcut which the manufacturer of the controller IC warns against.

The Percom solution, a PC card adapter called the SEPARATOR™, eliminates the problem by substituting an explicit data separator circuit

Percom adapter fixes TRS-80* computer disk controller.

— one which has been used reliably in Percom disk controllers since 1977 — for the internal IC separator circuit.

The SEPARATOR™ is installed without modifying the host system. The user merely removes the FD1771 IC from

the host controller, installs the IC in the DIP socket on the SEPARATOR™ card, and plugs the adapter into the vacated socket of the host controller.

Percom cautions that opening the Expansion Interface of the TRS-80* computer, which is required to install the SEPARATOR™, may void the computer's limited 90-day warranty.

The SEPARATOR™, which sells for \$29.95, may be purchased from Percom dealers or ordered direct from the factory. The Percom toll-free order number is 1-800-527-1592.

Payment for mail orders may be made by certified check, cashier's check or money order, or charged to a Master Card or VISA account. Texas residents must add 5% sales tax.

Percom Mini-Disk Drives Store More, Cost Less. 408

Percom mini-disk drives store more data, are more reliable, yet a 40-track Percom drive costs \$100.00 less than a 35-track Tandy drive.

You can store over 102 Kbytes per disk on Percom TFD-100™ 40-track drives, over 197 Kbytes per disk on TFD-200™ 77-track drives. A patch — supplied free on minidiskette — upgrades TRSDOS* for operation with the newer 40- and 77-track drives.

Both TFD-100™ and TFD-200™ models are available in one-, two- and three-drive configurations.

Prices start at \$399 for a single-drive TFD-100™, \$675 for a single-drive TFD-200™. Drives are supplied with heavy-duty power supplies. Metal enclosure is finished in compatible silver enamel.

See your nearby Percom dealer or order direct by calling toll-free 1-800-527-1592.

Five-Inch Disks Store More Than Eight-Inch Disks! 41

Garland, Texas — June 25, 1980 — Percom Data Company has begun production of a double-density disk controller adapter for TRS-80* Model I computers.

Harold Mauch, president of Percom, made that announcement here today, saying that data storage capacity using the adapter and double-density disk operating system — which is included — can be increased to as much as 354 Kbytes per minidiskette.

By comparison, the maximum storage for larger eight-inch disk systems used with the TRS-80*

Model I computer is about 290 Kbytes.

Mauch said the PC card adapter, which plugs into the controller chip socket of the computer Expansion Interface, works equally well for either single-density or double-density storage, and users may continue to run programs under TRSDOS*, OS-80™ and other single-density operating systems with the adapter installed.

Price, for the plug-in adapter, the TRSDOS*-like double-density DOS and a utility for converting files and programs from single- to double-density format is \$219.95.

BACKGROUND CRC ERROR! TRACK LOCKED OUT! 410

by the Technical Staff
Percom Data Company

This problem started while we were studying an annoying problem with the TRS-80* computer. Disk drives sold by Percom are realigned and tested before shipment. We noticed, however, that some disk drives would pass the Percom inspection but just would not work reliably on the inner tracks with a TRS-80* computer. These drives were within the manufacturer's specifications, and would function perfectly on other disk systems Percom manufactures — "perfectly" here meaning more than 50 million bytes read without error!

The disk read data separation arrangement in the TRS-80* computer Expansion Interface uses an internal data separator of the FD1771 disk formatter/controller IC. Use of the FD1771 internal data separator is not recommended by Western Digital, the IC manufacturer. The following note appears on page 17 of the FD1771 data sheet:

Internal data separation may work for some applications. However, for applications requiring high data recovery reliability, WDC recommends external data separation be used.

We suspected the data separator because the problem was most severe on disk inner tracks where storage density is highest and data separation is most critical.

To prove our point, a technician breadboarded a standard Percom data separator circuit, and configured it to plug directly into the FD1771 IC socket of the TRS-80* computer controller.

When connected to the TRS-80* computer, a troublesome drive functioned perfectly! We ran a BACKUP utility many times and never got a track lock-out. Before we added the external data separator circuit to the computer, this same drive would always lock out tracks, and would have difficulty reading from the inner (higher number) tracks.

The Percom data separator circuit fixes the mini-disk controller of the TRS-80* computer. The type of drives being used is irrelevant; the circuit eliminates disk read errors resulting from the inability of the Tandy controller design to reliably separate clock and data signals when reading high density inner tracks.

LEARN TRS-80® ASSEMBLY LANGUAGE DISK I/O

Your disk system and you can really step out with REMSOFT's Educational Module, **REMDISK-1**, a "short course" revealing the details of **DISK I/O PROGRAMMING** using assembly language.

Using the same format as our extremely popular introduction to assembly language programming, this **"ASSEMBLY LANGUAGE DISK I/O PROGRAMMING"** course includes:

- Two 45-minute lessons on audio cassette.
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A booklet of comprehensive, fully-commented program listings illustrating sequential file I/O, random-access file I/O, and track and sector I/O.
- A diskette with machine-readable source codes for all programs discussed, in both Radio Shack EOTASM and Macro formats.
- Routines to convert from one assembler format to the other.

This course was developed and recorded by Joseph E. Willis, for the student with experience in assembly language programming; it is an intermediate to advanced-level course. Minimum hardware required is a Model I Level II, 16 K RAM one disk drive system.

REMDISK-1 only **\$29.95**

ROM
Wasn't built in a day!

And you need a good guide to explore it. **SUPERMAP** is an invaluable aid in discovering the hidden secrets of Level II ROM. **SUPERMAP** is a long detailed and commented memory map of ROM routines giving register setups for calling them. Assembled RAM and ROOT, 3260, and 3261 are commented. There are notes on the significant addresses in the Radio Shack Editor/Assembler, 2800, and the Electric Pencil. Tape and memory format are given too. Learn which version of Level II ROM you have and what the differences are. All this and more for only **ONE** price.

Fuller Software
630 E. Sprague
Orem, Utah, UT 84051
(214) 642-0441

TUCH Examines, clears, initializes, moves and modifies data in memory. Compares two blocks or searches for up to 24 byte HEX or ASCII strings. Punch, load, verify, or execute SYSTEM tapes. Set breakpoints and jump. Display and modify registers. Output to printer if desired. **TUCH** tape has a bonus program, **MODIFY**, improves **EDIT**(1) or (2) by allowing return to BASIC without loss of source file. Also uses Level II I/O to allow debounce, serial drivers, etc. (16-48K) \$15

DATA Has all the above plus disk read and write. (16-48K) \$20

DISK-MOD Modify **EDIT**(1) or (2) under **TRSDOS**, **MEMDOS**, even **VDS** into a disk type I/O. Adds block move, global change, page output to printer with optional page prompt, sorted symbol table, and **DEFA** connections. Protect memory, use Level II I/O block, recover from reboots, and branch to any address. DIB, F800, and **KLICK** available without leaving the modified I/O (32K+ DOS required) \$20

DISASM 1 Disassemble 280 code to video, printer or tape. Provides **ASSEMB** CPG, and even labels. Tapes load into I/O to allow you to modify machine code programs easily. (16K, 32K, and 48K) \$15

DISASM 2 DOS version writes I/O as **NACOS** disk file. (32K+ DOS) \$20

STEP80 will single step BASIC or machine language programs even in ROM. Outputs trace values to video or printer via DCA. **STEP80** in ROM. Outputs trace values to video or printer via DCA. **STEP80** more. Relocatable program. \$16.95 + \$1.00 postage and handling.

SILVER-IT a kit to silver solder the TRS80's cheap bus connections for increased reliability and wear. Hi-No silver away for only \$5.

INSIDE LEVEL II excellent manual containing 18 chapters on using ROM routines with many examples and explanations. It shows how to make a composite program load under **SYSTEM** but execute in both BASIC and machine language. Problems of using ROM in a disk system are shown and solved. Expand **USK**; relocate and interface with BASIC programs after reading these chapters. \$15.95 + \$1.00 postage and handling.

TRM BOOK The most comprehensive and complete book yet on the math routines in Level II ROM. Has a commented disassembly of addresses 300 to 1607. This is the book for the serious assembly programmer. 136 pages. 7 chapters. \$14.95 plus \$1.50 postage and handling.

DOS Bytes ROOT, 3260/3261, 3261/3262 comments. 12 page booklet. \$5

Fig. 4. Near-horizontal Line on Video Monitor (on left) and Near-vertical Line.

width of the Quick Printer paper (approximately 4.75 inches) as the horizontal axis. It compensates for the 80 characters per line, compared with 128 spaces on the horizontal axis of the video monitor, by compressing 1.6 spaces of video into one line character on the Quick Printer.

This works all right, but the curves are further compressed about the vertical axis. Now seven units on the horizontal

axis equal one unit on the vertical axis. This is shown in Fig. 3.

My solution is to use the width of the Quick Printer paper as the vertical axis and the length of the paper as the horizontal axis. This corresponds roughly with the 48 by 128 matrix on the video monitor.

Now, if I let one line character represent one unit on the vertical axis, with one line representing a unit on the horizontal

NEW FROM MICRO-SYSTEMS!!!

Micro-Systems Software Inc. now has double density software available for TRS-80® Model I's that are equipped with the Percom Doubler. +

First is a disk editor called "Disk Zap 2.3". This editor will work either single or double density diskettes. It is track and sector oriented, and offers total access to all parts of the disk. It has the ability to format and backup diskettes as well as editing them.

Second is our new double density DOS. DOSPLUS 3.1D is similar in most respects to our single density operating system; but offers the increased disk storage of double density.

Disk Zap is \$19.95, and DOSPLUS 3.1D is \$99.95. To order, call or write us at the address below. Master Card and Visa welcome. Orders accompanied by a personal check will be shipped when the check clears the bank.

SOFTWARE FOR THE TRS-80®

**NOW!
A LIGHT PEN
FOR THE TRS-80
AND
SOFTWARE
THAT USES IT!**

QS LIGHT PEN. We have taken the excellent Photopoint™ light pen and packaged it with our own custom software. Use the light pen to draw on the video screen, make multiple choice selections, or add zip to your game programs. You get the light pen which plugs into your tape recorder, and an instruction booklet that includes the software you need to interface to your own BASIC programs. Our software routines are in BASIC and a simple GOSUB puts the light pen in action. These routines include a "menu selection" routine and a "screen location" routine. Two BASIC programs that demonstrate these routines are also included. One 9V battery required, not included. Light Pen — **\$19.95**

SKETCH-80™ by Bob Christiansen. Use the QS light pen to draw figures on the TRS-80 video screen. Figures are drawn at three times normal size. Then save your sketch in memory and start another one. Your sketch can be displayed at normal size or at the enlarged size at which they were drawn. Combine two or more sketches on the same screen. Ask the computer to print out the POKE values required to produce your sketch using BASIC. Save your sketches on diskette. This system program figures out how much memory your TRS-80 has and allocates storage accordingly. Requires level II, 16K. On Cassette — **\$14.95**

THE FOLLOWING PROGRAMS REQUIRE LEVEL II, 16K, AND CAN BE PLAYED WITH OR WITHOUT A LIGHT PEN.

POKER PETE™ by Dave Gubser. Play live card draw poker one on one against an animated PETE. Watch PETE shuffle and deal the cards. He will challenge you with bluffs, raises, calls and folds in this winner take all showdown. And watch out — PETE's got a gun! Three levels of skill. Written in BASIC.

On Cassette — **\$11.95**

LOWBALL POKER by Danny Shea. How low can you go? It's you against Micro Molly and the lowest hand wins. That's the rule in lowball poker. This version plays the popular Gardenia, California rules. Don't take her for granted — Molly plays an excellent game. Written in BASIC. On Cassette — **\$11.95**

RUMMY MASTER by Dave Gubser. Play rummy against the computer. Exceptional graphics display your hand, the discards, and the cards that have been melded. You see your opponent shuffle and deal out the cards. Tested in an arcade, this program was a big hit. Written in BASIC. On Cassette — **\$11.95**

MATCH CARDS by Danny Shea. **BANKSHOT** by Bob Christiansen. Two programs on one cassette. **MATCH CARDS** is a concentration-type game where you match numbers, letters, or graphic shapes. For 1 or 2 players. Automatic scoring rates your recall ability. Written in BASIC. **BANKSHOT** is a billiard-like game for those who think they know all the angles. Hit the ball into the pocket, but you must hit a wall first. Written in BASIC with machine language subroutines. Just CLOAD and RUN. For 1 or 2 players. On Cassette — **\$9.95**

THE FOLLOWING PROGRAMS REQUIRE LEVEL II, 16K, AND DO NOT USE A LIGHT PEN.

FASTGAMMON™ by Bob Christiansen. Our popular machine language backgammon game that started us in business. The computer plays against you and makes good moves instantaneously. Option to replay dice rolls from the previous game. An eight page instruction booklet is included.

On Cassette — **\$19.95**
On Diskette — **\$24.95**

DEBUG by Bob Pierce. Debug machine language programs by stepping through one Z-80 instruction at a time. Relocatable. Several display options. Multiple break points. Modify memory and registers.

On Cassette — **\$14.95**

Z-80 DISASSEMBLER by Vic Tolomei. Decode machine language programs, including TRS-80 ROM with this Z-80 Disassembler written in BASIC. Instruction mode prints out machine code and Zilog mnemonics in standard format. Or use the ASCII mode which converts machine language code to ASCII.

On Cassette — **\$14.95**

* Photopoint has been trademarked by Micro Matrix.

close to the vertical appear on the video.

Lines 170 and 171 in the Program Listing are designed to eliminate extra +’s on near-vertical lines. I tried putting in a similar routine to eliminate extra +’s for near-horizontal lines—and succeeded in eliminating so many that the graph was uninterpretable!

The finished product is shown at Fig. 5. Note that it looks more like Fig. 1 than Fig. 2. It demonstrates that with some fitting to the particular curves being graphed, you can print a satisfactory representation of the video monitor display on the TRS-80 Quick Printer. ■

Program Listing.

SPECIAL DELIVERY

WORDPROCESSING

Don't play games with YOUR mailing list in a BASIC program! Get down to business with **SPECIAL DELIVERY.**

Fast, dependable and easy to use machine language from SOFTWARE CONCEPTS.

"If you're presently looking for a mailing list processor, this represents the current state of the art. ... leave any equivalent BASIC program miles behind ... extremely fast searches and sorts... At a price of \$125.00 this package is not cheap. But then good software doesn't come for pennies. Any businessman using mailing lists (and that doesn't leave out many!) would be well advised to use this package. You'd be hard put to find a better one."

80 Microcomputing - 80 Reviews - July 1980

"...machine language, very rapid and extremely sophisticated... Easy to enter and edit data... The ability to sort via any field, the speed of data entry, and the ease of editing are all very impressive... tremendous flexibility... (MAILRITE) allows you to print letters, envelopes, or labels from a master mailing list made from MAILFORM... machine language, very fast and cleanly written..."

80-US - Software Review - Sept/Oct 1980

SPECIAL DELIVERY will operate in all known
TRS-like DOS environments,
including double density and hard disk.

SPECIAL DELIVERY (MOD I)	\$125
SPECIAL DELIVERY (MOD II)	\$275

Carrollton, Texas 75007
Phone Orders: (214) 492-0515

Dealer inquiries invited - Write for our complete brochure of fine software

You say you want educational software. Here it is, Bunkie.

Hey . . . You in the Corner

Mike South
4510 Clark Rd.
Pasco, WA 99301

Attention, class! Can anyone name a use for a computer? No, not games! Yes, you in the corner. Ah, good! Did everyone hear that? He said *educational games*".

"What's that, Simon? You have a 4k Level I TRS-80, but no educational programs for it? Never fear! Today the Professor has just what the doctor (of computer science) ordered."

Mission Control

Mission Control is a program that makes simple math drills—addition, subtraction, multiplication and division—enjoyable for students. You can even use

the program to practice with negative numbers.

As the student runs the program, a series of math problems are presented. The problems may be any combination of the four mathematical operations and in any of four difficulty levels. As the student progresses, various messages, such as Tracking—Go!!, light up the annunciator panel at the left of the screen. With each correct answer a timer decreases by one. When a student answers a certain number of problems correctly, a rocket ship blasts off from a launching pad and continues across and off the top of the screen.

Load and run the program. Make sure that whoever is going to use the program knows these five things:

1. Push the Enter key after each answer.
2. Use the ← key to correct

mistakes.

3. To prematurely stop the program, press the Break key.
4. Numbers are entered calculator fashion (with each new digit the number is shifted over and the new digit is put in the ones column).
5. There is a difference between zero and the letter O. The computer will not accept O for a number, only zero.

After you have typed Run there will be a short delay as the computer initializes the random numbers. It will then print a short introduction to get the student's attention. It will ask which types of problems (+, -, ×, ÷) are wanted. You may choose more than one, but you must choose at least one. These four questions must be answered Yes or No.

The computer will then ask for a skill level number, which the student answers by entering a

Modification	Room required
One	14 bytes
Two	None
Three-Five	Total of 19 for all three, +/− approximately 25 bytes for each skill level added/deleted
Six	− 333 bytes
Seven	− 52 bytes
Eight	164 bytes
Nine	80 bytes

Negative numbers indicate a space saving modification.

Table 1. Memory Size Modification Table.

LYNX

makes your TRS-80 a whole new animal.

LYNX is more than a telephone coupler. LYNX is a one-piece total telephone linkage system for TRS-80 Level I and II computers, with or without expansion interface. No RS-232 required for true originate/answer direct-connect telephone operation. DOS-compatible EMTERM "smart terminal" software furnished on cassette. Already have a favorite TRS-80 program? Use it with LYNX.

With LYNX you can tap the Source or the new Compu-Serve Information Utility. Control university, business and personal computers from a remote location. Communicate via electronic mail. Learn from library data bases. Profit by instant financial market info.

All for only \$279.95* at your dealer or:

its...SOFTWARE SE Search Entry

SE is a super-fast, general purpose information retrieval program for the TRS 80*. The uses of SE are limitless. It can be a file system, a matching service, an inventory control, or a message center. Whenever fast searching of large amounts of data is needed, SE can be your program.

Written in Z80 machine language, SE compares tens of thousands of characters in a few seconds. Simple commands add, change, or remove data entries. To search for entries, up to 64 characters can be combined as targets for immediate retrieval. SE occupies only 4K; the rest is storage and can be saved on tape or disk.

The tape version for 16K level II, SE2.0, is \$24.95, while the disk version for DOS up to 48K, SE3.0, is \$49.95. The price includes full documentation.

1. BUSINESS PROGRAM PACKAGE

13 Business programs (e.g., capital budgeting, cash-management, ratio analysis, debt management). These programs will be very useful to the business manager. (Price \$200)

2. PROCUREMENT PROGRAM

Ascertains purchase amount when future price of commodity is varying. A must for all managers who have purchasing responsibilities. This program takes into consideration inventory levels, inventory capacity, and financial carrying cost in determining the optimal amount of an item to purchase when future prices are varying. (Price \$150)

3. PROFORMA CASH-BUDGET PROGRAM

Allows the user to project the cash-balances for up to twelve periods in the future. Amount of loan, if needed, is computed as well as computing funds available for short-term investment. (Price \$125)

4. LEASE-PURCHASE PROGRAM

Evaluates the lease vs. purchase decision incorporating all the latest tax laws including the investment tax credit and accelerated depreciation. This program gives the user all the information necessary to make this decision. (Price \$50)

5. COLLEGE ENROLLMENT PROJECTION PROGRAM

Forecasts the enrollment for colleges using several different statistical techniques. User can specify the number of periods for which a forecast is desired. (Price \$100)

Extensive Documentation With Each Program

All programs on disk and require at least 32K of memory.

Write or call for a brochure which describes the product in greater detail.

MANAGEMENT SYSTEMS SOFTWARE, INC.

5200 Brittany Drive, #1006 St. Petersburg, Florida 33715

813 864-4347

Attention TRS-80 Mod II owners: P&T CP/M® 2 has more to offer!

More Disk Storage 598K bytes with double density on standard single sided disk drives. If that's not enough, versions are available for double sided expansion drives (1.2M bytes per disk) and the Cameo Hard disk system (10M bytes.)

More CRT Functions P&T CP/M 2 has the most advanced screen driver available for the Mod II including: erase to end of line/screen, insert/delete line, cursor addressing, non-scrolling area on screen, and much more.

More Serial I/O Capabilities The serial drivers in P&T CP/M 2 support ETX/ACK, XON/XOFF, and request to send handshaking. Direct control of serial ports is also available for special applications.

More Documentation We provide the standard CP/M manuals and our own 150 page manual written specifically for P&T CP/M 2.

More Utilities We have added 14 of our own utility programs for the Mod II to the standard CP/M utilities.

More Useful System Functions P&T CP/M 2 has all sorts of useful features you won't find elsewhere: type-ahead buffer for keyboard input, system time of day clock, automatic program execution and lots more.

Prices

Standard P&T CP/M 2	\$185
P&T CP/M 2 for Shugart 850 2 sided drives	\$220
P&T CP/M 2 for Cameo Hard Disk system	\$250

We also carry other software packages, single & double sided expansion drives and the Cameo Hard Disk System. Write for details.

Prepaid COD, MasterCard or Visa orders accepted.
Shipping extra. California residents add 6% sales tax.

PICKLES & TROUT
PO BOX 1206, GOLETA CA 93017. (805) 967-9563

CP/M is a trademark of Digital Research Inc. TRS-80 is a trademark of Tandy Corp.

3200 x O, a, b, c, d, e, f

x = Skill level number

a = Maximum of first addition number

b = " second "

c = " answer (a + b). If the values randomly chosen for a and b would result in an answer greater than c, new values for a and b are chosen.

d = Maximum of first multiplication number

e = " second "

f = " answer (d * e)

The program creates subtraction problems from addition problems. The addition problem 3 + 5 = ? would become 6 - 5 = ? or 8 - 3 = ? for a subtraction problem. The same method is used for multiplication and division.

Fig. 1. Skill Level Modification

number between one and four. The easiest is level one and the degree of difficulty progresses through level four, which is quite difficult even for an adult.

At this point the computer clears the screen, draws the pattern that will be used in the game, and then begins the test.

Three Opportunities

Each problem is displayed in the middle of the screen. The student has three opportunities to answer each problem, after which the computer prints the answer on the screen. (By the way, if the picture on the screen is disturbed during the game, press the Break key and run the program again.)

Each time the student answers a problem correctly the computer updates the timer and may light up a message in the annunciator panel. The seconds on the timer are equal to the number of problems to be answered before the rocket takes off, plus ten.

When the student correctly answers a certain number of problems the program simulates a count down, with the timer decrementing from ten to zero. At zero the rocket blasts off. After the visual display the student is told how well he did, by means of one of two computer messages. The message displayed depends upon the percentage of problems that were answered correctly on the first try.

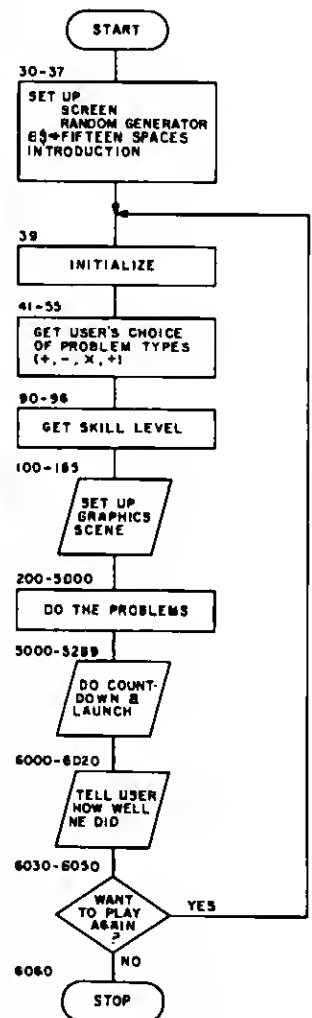

Finally the program asks if the student wants to play again.

Customizing Ideas

For those of you who can't

leave a good thing alone, I've included a few ideas for modifications.

Before you do any surgery make sure the entire patient is loaded into the computer. If you have only a limited amount of memory available, it is best to make sure there will be enough for all the changes you plan.

DONE

Program Listing. Mission Control

First find how much space is left over after the program is loaded. Subtract 16 from that number; sixteen bytes are needed for an array. This is the amount of room available. Next calculate the amount of memory needed for the changes (Table 1).

Modification number one: As the program now stands, if the user misses a problem the next one will be a different operation. To give him the same operation as the one missed, type in the following line:

computer. Substitute the desired numbers for the lowercase letters. For example, suppose that for skill level one you want the highest value assigned to the first addend to be 10, the highest value assigned to the second addend to be 5, the highest sum allowed to be 13; the assigned multiplicand value to be no greater than 3, the assigned multiplier value to be no greater than 6, and the result to be a maximum of 12. You would type:

32001D.10.5.12.3.6.12

2895IFK<98F=F-1

Modification number two: If you desire to change the skill levels, enter Fig. 1 into your

(Note that the line number for this modification is 32001, not 3200. Similarly the line number for skill level two would be 32002,

40P=w:A=x:T=y:S=z

w = Number of problems must answer correctly for skill level one
 x = Extra number of problems per skill level increase (E.G.: Skill level three would require w + x * 3 problems done correctly)
 y = Number of extra tries
 z = Number of skill levels available

Fig. 2. Modifications Three-Five

```

35ENTER
36ENTER
37ENTER
41A(0)=w:A(1)=x:A(2)=y:A(3)=z
50ENTER
56ENTER
32000ENTER

```

w = Addition
 x = Subtraction
 y = Multiplication
 z = Division
 For w,x,y,z: If equals one, you want that type of problem; zero if you don't

Fig. 3. Modification of Operation Choice

Variable	Lines Used	Use
AS	41-50 600-640 2500 5000-5120 90(for mod #7)	Math operation name Math symbol (+, -, x) Annunciator message Annunciator message Dummy
BS	30-5120	Holds fifteen spaces (used to clear display)
A(0-3)	41-5000	Holds user's operation choices (1 = yes, 0 = no) 0: addition 1: subtraction 2: multiplication 3: division Random seed
A	32 39-97 210-400 500-2300	Increases, for each level above level one, in number of problems the student must answer correctly First addition/subtraction number Goes into this block as add/sub number, comes out as top number of problem I.E.: $\begin{array}{r} A \quad A \quad A \quad C \\ + B \quad - B \quad \times B \quad B \div A \\ \hline C \quad C \quad C \end{array}$
B	32,98 210-400 500-630	Dummy Second number for add/sub Goes in as second number for add/sub, comes out as bottom number of problem
C	500-2300	Answer to problem
D	230,500,620, 630,2300	Input to DIG# subroutine
E	50-55,90-97, 900-1100,1410, 6040-6050	Input
F	39-5000	Which operation currently doing (1:add 2:sub 3:mult 4:div)
G	220-400,500,620	First mult/div number
H	220-400,500,620	Second mult/div number
I	200-6015	Total number of problems attempted
J	41-55,100-165, 5200,5299 200-5000	For-next loops, usually graphics Number of problems student has yet to answer correctly
K	37,100-165,510 640,500-5299 1100-1700 (2300-2395 for mod. #1,	For-next loops. Graphics For-next loop; Extra attempt counter; Flag (K<98 if user didn't get problem right, K = 0 if got right on first attempt)
L	41-55,230,620 1200,2000,2300, 2390,2500,5000, 6030 (630 for mod. #6)	General purpose; temporary
M	5200-5299 97-6010	For-next. Graphics Initial value for number of problems student must answer correctly
N	41-55, 6030-6045 230,500,510, 620,630-640,2300	Used for indirect input (if user wants "N", "NO", etc.) Output of DIG# subroutine
O	98,230,610,620 5200-5299	Temporary Used in graphics (holds last height)
P	39-98	Number of problems must answer correctly for skill level one
Q	39-5000	Holds number of last annunciator message displayed
R	39-6015	Number of problems student answered correctly on first attempt
S	39-98	Number of skill levels available
T	39-5000	Number of extra attempts user gets
U-Z	97-5000	Difficulties of problems for chosen skill
Y	41-55,6030-6045	Used in indirect inputting (like N)

Table 2. List of Variables

Routine	Lines	Var.	Uses
DELAY	2	L	Temporary
DIG#	4-5	D,N	D = Input, N = Output
SWITCH	6-7	B,C,O	B&C = Input&Output, O = temporary
ROCKET	3000-30070	J,K	For-next loops (graphics)

Table 2a. Subroutines

etc.)

Modifications three, four, and five: To change the number of extra tries given the student, and/or the number of problems that have to be answered correctly before the rocket will launch, and/or the number of skill levels, input the line shown in Fig. 2, using what part of it you need. If, for example, you wanted five extra attempts and six skill levels, but want to leave the number of problems as is, you would type:

40T = 5:S = 6

If you are going to change the number of skill levels to less than four, you should delete some of the lines which define the difficulties. Let's say that you only want two skill levels. You then have to delete the lines for skill levels three and four. To do this, type:

32003 ENTER
32004 ENTER

If you want more than four skill levels, you will have to add lines in the manner of modification two. If you desire five skill levels with the maximum values being 10, 10, 20 (addition) and 5, 5, 25 (multiplication) you would type:

320050,10,10,20,5,5,25

You may have a maximum of nine skill levels.

Modification number six: To take away the user's freedom to choose operations (+, -, x, /), use the lines in Fig. 3.

Be very sure not to tell the computer to do nothing, e.g.:

41A(0) = 0:A(1) = 0:A(3) = 0

If you do, the computer will

```

2331FR(0)>.5A = - A
2371FR(0)>.5B = - B
2431FR(0)>.5G = - G
2471FR(0)>.5H = - H
630D = B:GOS.4:L = N:P.A.97 - N,
B::O = A:GOS.4:P.A.33 - N.A.:IFN
<LN = L
4F.N = 1TO9:O = A:(D/10):
IFD = 1N.N

```

Fig. 4. Negative Number Modification

get stuck!

Modification number seven: To freeze the skill level at some particular difficulty, enter the following:

```

90:1:"PRESS 'ENTER'
KEY TO GO ON":AS
93E = Z
Z = Skill level wanted

```

You must be careful to specify a skill level that is available.

If you don't expect to change the skill level often you can save space by cutting the skill levels down to one (modification five). Make level one as difficult as you want (modification two), and then freeze the skill level at level one.

Modification number eight: Type in the lines which are in Fig. 4 and the computer will give practice in negative numbers.

Modification number nine: As it comes from the factory, Mission Control will give you the answer to a problem you can't answer correctly, wait three seconds, and then continue. If you would rather have it wait until you're ready, use the following lines:

```

23931FK<98P.A.410:"PRESS 'ENTER'
KEY TO GO ON":I.A.S:P.A.410

```

The computer will wait for you to push the ENTER key before going on.

Converting to Other BASICs

Those of you who don't have a

Table 3. Level I BASIC Abbreviations

SOFTWARE → TRS-80 ← SOFTWARE

PACKAGE ONE INCLUDES: GRAPHIC-TREK 2000 — This full graphics, real time game is full of fast, exciting action! Exploding photon torpedoes and phasers fill the screen! You must actually navigate the enterprise to dock with the giant space stations as well as to avoid Klingon torpedoes! Has shields, galactic memory readout, damage reports, long range sensors, etc! Has 3 levels for beginning, average, or expert players! • **INVASION WORD** — Times 3009, Place: Earth's Solar System Mission: As general of Earth's forces, your job is to stop the Worg invasion and destroy their outposts on Mars, Venus, Saturn, Neptune, etc! Earth's Forces: Androids, Space Fighters, Laser Cannon — Neutrino Blasters! Worg Forces: Robots — Saucers — Disintegrators — Proton Destroyers! Multi level game lets you advance to a more complicated game as you get better! • **STAR WARS** — Maneuver your space fighter deep into the nucleus of the Death Star! Drop your bomb, then escape via the only exit. This graphics game is really fun! May Force be with you! • **SPACE TARGET** — Shoot at enemy ships with your missiles, if they eject in a parachute, capture them — or if you're cruel, destroy them! Full graphics, real time game! • **SAUCERS** — This fast action graphics game has a time limit! Can you be the commander to win the distinguished cross? Requires split second timing to win! Watch out!

ONLY 14.95

PACKAGE TWO INCLUDES: CHECKERS 2.1 — Finally! A checkers program that will challenge everyone! Expert as well as amateur! Uses 3-ply tree search to find best possible move. Picks randomly between equal moves to assure you of never having identical games. • **POKER FACE** — The computer uses psychology as well as logic to try and beat you at poker. Cards are displayed using TRS-80's full graphics. Computer raises, calls, and sometimes even folds! Great practice for your Saturday night poker match! (Plays 5 card draw). • **PSYCHIC** — Tell the computer a little about yourself and he'll predict things about you, you won't believe! A real mind bender! Great amusement for parties. • **TANGLE MANIA** — Try and force your opponent into an immobile position. But watch out, they're doing the same to you! This graphics game is for 2 people and has been used to end stupid arguments. (And occasionally starts them!) • **WORD SCRAMBLE** — This game is for two or more people. One person inputs a word to the computer while the others look away. The computer scrambles the word, then keeps track of wrong guesses.

ONLY 14.95

PACKAGE THREE INCLUDES: POETRY — This program lets you choose the subject as well as the mood of the poem you want. You give TRS-80 certain nouns or names, then the mood, and it does the rest! It has a 1000-word vocabulary of nouns, verbs, adjectives and adverbs! • **ELECTRIC ARTIST** — Manual: draw, erase, move as well as, Auto: draw, erase and move. Uses graphics bits not bytes. Saves drawing on tape or disk! • **GALACTIC BATTLE** — The Swineus enemy have long range phasers but cannot travel at warp speed! You can, but only have short range phasers! Can you blitzkrieg the enemy without getting destroyed! Full graphics — real time! • **WORD MANIA** — Can you guess the computer's words using your human intuitive and logical abilities? You'll need to, to beat the computer! • **AIR COMMAND** — Battle the Kamikaze pilots. Requires split second timing. This is a FAST action arcade game.

ONLY 14.95

PACKAGE FOUR INCLUDES: LIFE — This TRS-80 machine language program uses full graphics! Over 100 generations per minute make it truly animated! You make your starting pattern, the computer does the rest! Program can be stopped and changes made! Watch it grow! • **SPACE LANDER** — This full graphics simulator lets you pick what planet, asteroid or moon you wish to land on! Has 3 skill levels that make it fun for everyone. • **GREED II** — Multi-level game is fun and challenging! Beat the computer at this dice game using your knowledge of odds and luck! Computer keeps track of his winnings and yours. Quick fast action. This game is not easy! • **THE PHAROAH** — Rule the ancient city of Alexandria! Buy or sell land. Keep your people from revolting! Stop the rampaging rats. Requires a true political personality to become good! • **ROBOT HUNTER** — A group of renegade robots have escaped and are spotted in an old ghost town on Mars! Your job as "Robot Hunter" is to destroy the pirate machines before they kill any more settlers! Exciting! Challenging! Full graphics!

ONLY 14.95

PACKAGE FIVE INCLUDES: SUPER HORSEACE — Make your bets just like at the real racetrack! 8 horses race in this spectacular graphic display! Up to 9 people can play! Uses real odds but has that element of chance you see in real life! Keeps track of everyone's winnings and losses. This is one of the few computer simulations that can actually get a room of people cheering! • **MAZE MOUSE** — The mouse with a mind! The computer generates random mazes of whatever size you specify, then searches for a way out! The second time, he'll always go fastest route! A true display of artificial intelligence! Full graphics, mazes & mouses! • **AMOEBA KILLER** — You command a one man submarine that has been shrunk to the size of bacteria in this exciting graphic adventure! Injected into the president's bloodstream, your mission is to destroy the deadly amoeba infection ravaging his body! • **LOGIC** — This popular game is based on Mastermind but utilizes tactics that make it more exciting and challenging — has 2 levels of play to make it fun for everyone. • **SUBMARINER** — Shoot torpedoes at the enemy ships to get points. Fast action graphics, arcade type game is exciting and fun for everybody!

ONLY 14.95

HARDWARE → TRS-80 — HARDWARE

MICRO SPEED

Upgrade your "slow" TRS-80 to a SUPER FAST MACHINE!! (2.66 MHZ) over 50% FASTER! Some of the features:

Auto turn-off during cassette or disk access. (This means NO lost programs EVER!) (Turns back on automatically too!) MANUAL control. (Unit may be turned on or off at any time. Yes even during program execution!) Keyboard indicator light "blinks" when micro-speed is on. Stops blinking when off! Don't wait for SARGON II or any other program!!! Comes with easy to follow instructions. (Some soldering required.) OR take to your local computer store or TV-Appliance Center for quick installation. (5-10 minutes!!) Works with any model, TRS-80.

ONLY 29.95 complete

MICRO BEEP

Simple hook up: Just plug cassette remote jack into unit.

EASILY CONTROLLED FROM BASIC:

OUT 255,4 = on
OUT 255,0 = off

MICRO-BEEP make games more fun as well as provide useful sound output for professional applications!

Works with Any Model I TRS-80

ONLY 15.95 complete

PACKAGE SEVEN INCLUDES: BACKGAMMON 5.0 — 2 different skill levels make this game a challenge to average or advanced players! FAST (15 second avg) Looks for best possible move to beat you! FANTASTIC GRAPHICS. Plays doubles and uses international rules! • **SPEED READING** — Increases your reading speed. Also checks for comprehension of material. Great for teenagers and adults to improve reading skills! • **PT 100** — Drop depth charges on moving subs. Lower depths get higher points in this fast action graphics game. • **VAHTZEE** — Play Yahi-ze with the computer. This popular game is even more fun and challenging against a TRS-80! • **WALL STREET** — Can you turn your \$50,000 into a million dollars? That's the object of this great game. Simulates an actual stock market!

ONLY 14.95

PACKAGE SIX INCLUDES: 20 HOME FINANCIAL PROGRAMS — Figures amortization, annuities, description rates, interest tables, earned interest on savings and much, much more. These programs will get used again and again. A must for the conscientious, inflation minded person.

ONLY 14.95

TRS-80 IS A REGISTERED TRADEMARK OF TANDY CORP.

Level I TRS-80 but want to use this program on your computer will need to know a few details about this BASIC.

Graphics: The 80 has a graphics resolution of 128 vertical by 48 horizontal. The top left corner is position (0,0) and the bottom right is position (127,47). The commands used to manipulate

these points are:

SET(X,Y) Turn on the graphics spot at (X,Y).
 RESET(X,Y) Turn off the spot at (X,Y).
 POINT(X,Y) A function which returns (is equal to) 1 if the spot is on, and 0 if it is off.
 CLS Clears the screen and puts the cursor at the top left corner.

Print formatting: Level I has a

PRINT AT X statement which moves the cursor to position X on the screen before printing. The top left corner is position 0, and the bottom right is position 1023. A comma, separating items in a PRINT statement (for example PRINT A,B,C) puts the item following the comma in the next print field.

Fields start at columns 0, 16,

32, and 48 in each line. Semicolons put the next item immediately after the previous item. An exception is "PRINT AT," which is the same as "PRINT AT,,".

FOR-NEXT loops: BASIC will always run through a FOR-NEXT loop at least once; it checks if the variable is in bounds at the NEXT point, not at FOR.

IF X THEN Y: If X is false, it will jump to the next line; it will not do the next statement in a multistatement line. Y may be any legal statement, not just a line number. THEN is optional.

Random numbers: RND(X) returns a random number between 0 and 1 if X<1. If X>1, RND(X) is a random integer between 1 and X. An equivalent statement is INT(RND(0)*X) + 1.

Logical operations: The symbol for AND is *, and + stands for OR.

Numerical input: This BASIC allows you to input a variable name where a number is wanted. Only the first letter is looked at. Thus, YES would input the value of Y.

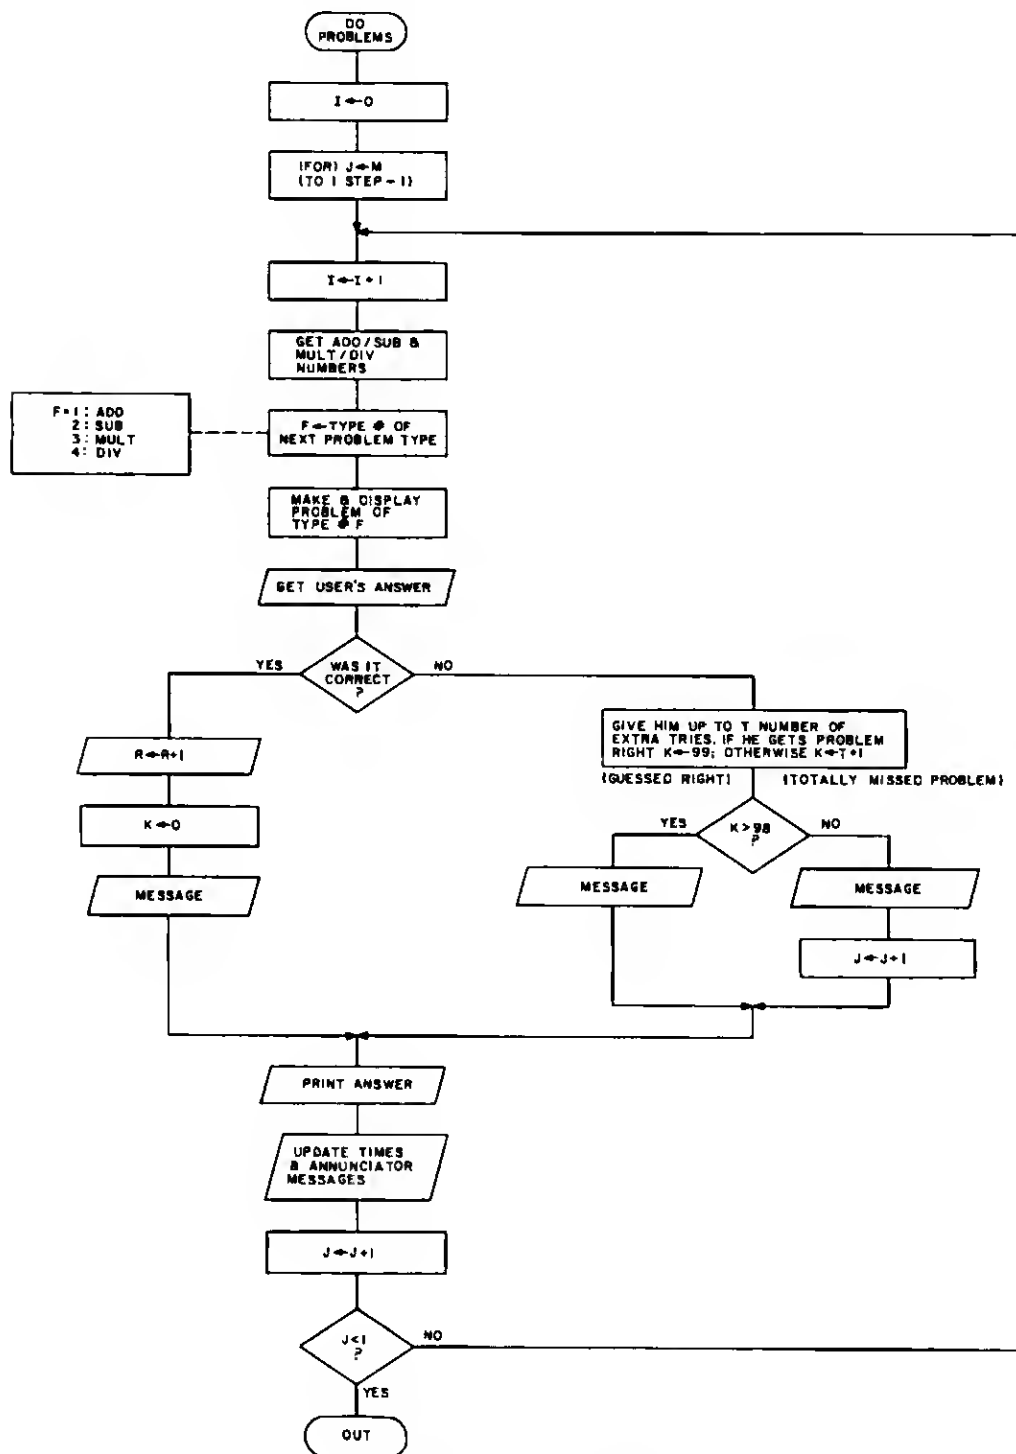

Variables (Table 2): Only twenty-six numeric variables are allowed (A-Z). There are two string variables (A\$ and B\$), each containing up to fifteen characters. All variables are defined from the moment you turn the computer on until the moment you turn it off. (Of course, until you assign it a value, it could be any random number, a characteristic I use in initializing the random number generator.)

A single one-dimensional array is available—array A. It uses whatever memory is not needed by the program, therefore there is no DIM statement. Each element takes four bytes. In Mission Control four elements are used, for a total of sixteen bytes.

Abbreviations: Level I BASIC allows abbreviations of instructions. A list of these is shown in Table 3.

End of Lecture

"There you are, Simon. A useful, educational program that will fit on your 4k, Level I TRS-80. Class dismissed." ■

Let Your TRS-80® Teach You ASSEMBLY LANGUAGE

Tired of buying book after book on assembly language programming and still not knowing your POP from your PUSH?

REMSOFT proudly announces a more efficient way, using your own TRS-80®, to learn the fundamentals of assembly language programming -- at YOUR pace and at YOUR convenience.

Our unique package, "INTRODUCTION TO TRS-80® ASSEMBLY PROGRAMMING", will provide you with the following:

- Ten 45-minute lessons on audio cassettes.
- A driver program to make your TRS-80® video monitor serve as a blackboard for the instructor.
- A display program for each lesson to provide illustration and reinforcement for what you are hearing.
- A textbook on TRS-80® Assembly Language Programming
- Step-by-step dissection of complete and useful routines to test memory and to gain direct control over the keyboard, video monitor, and printer
- How to access and use powerful routines in your Level II ROM.

This course was developed and recorded by Joseph E. Willis and is based on the successful series of courses he has taught at Meta Technologies Corporation, the Radio Shack Computer Center, and other locations in Northern Ohio. The minimum system required is a Level II, 16K RAM

MICRO-SPEED TRS-80 SPEED UP MODIFICATION THE BEST ON THE MARKET! Simutek's Micro-Speed increases computer operating speed by 50%

- 1) Speeds up your TRS-80 from 1.77MHz to a hefty 2.66 MHz!
- 2) Shuts down during disk or cassette I/O to end lost programs, then turns back on automatically when disk or cassette I/O is finished (Provided, of course, it was on to begin with)
- 3) Connects to keyboard L.E.D. and blinks when unit is operating. Stops blinking when turned off!
- 4) Comes with illustrated instructions (Some soldering required)
- 5) Average person can install in 10-20 minutes!
- 6) All work is done in hardware! Absolutely no software drivers needed!
- 7) Operates with any TRS-80, (except Model II) works with TRSDOS, NEWDOS or any other operating system or software. Works with RS-232 and telephone modems!
- 8) Comes completely assembled and ready to install. All wires are stripped, switch installed!

There are no hidden extra costs to you!

- 9) May be turned on or off at any time! Even during program execution!
- 10) Money back guarantee!!

Our new program package for the TRS-80 sounds terrific.

So does the price.

There are lots of programs with sound that are worth about a dollar. Trouble is, they cost a lot more.

But at Basics & Beyond we've just developed Microcosm III, 20 programs with sound — each just as good as our competition's \$15 and \$20 programs — for \$24.95. That's a 20-program package for \$24.95.

It includes "Pinball," replete with ringing bonuses, spinners, buzzers and flippers; torpedo-firing "Submarine" that explodes with underwater excitement; and the right/wrong buzzer in "Long Division" teaches step by step.

At Basics & Beyond we underscored our point that most other program packages are overpriced with Microcosm I and Microcosm II, \$19.95 each. Now a lot of people will start hearing about our third package and stop listening to high prices.

You see, it's not that our program packages for the TRS-80™ microcomputer are so cheap. It's just that theirs are so expensive.

Foolproof method of your own choosing.

Menu List Selection Subroutine

Frank B. Rowlett, Jr.
4272 Lancaster Drive
Sarasota, FL 33583

You've probably eaten in restaurants where the major items on the menu have numbers next to them and you order by giving the numbers.

By doing this everything is simplified. Time is saved. Information is accurate. It is quickly given, transmitted and acted on.

Choosing Options

The same technique can be used in interactive application programming. Menu selection—or list selection—is an important tool. It allows the user to specify an option.

The usual procedure presents a list of options available and the user indicates which one he wants. This is done by numbering the options and having the user enter the number. Table 1 illustrates a typical list as might be displayed by a computer.

The list selection technique was originally developed for

INPUT: X = STARTING LOCATION TO PRINT INDICATOR
X0 = NUMBER OF ITEMS IN MENU

OUTPUT: X = NUMBER OF ITEM SELECTED

USES: X, X0, X1, X2, X3 AND B

```

1000 X1 = X                                'SET X1 TO 1ST ITEM PRINT LOCATION
1010 PRINT@960,CHR$(30);"[ MOVES INDICATOR UP, "CHR$(92);" MOVES INDICATOR DOWN
    , "CHR$(34);"ENTER":CHR$(34);" TO SELECT";
1020 PRINT@X1, CHR$(143);                  'PRINT INSTRUCTIONS
1030 FOR X2 = 0 TO 2                        'PRINT GRAPHIC BLOCK
1040 B = INKEY$                             'SET TIMING LOOP
1050 IF B = "" THEN NEXT X2 ELSE 1100      'GET ANY INPUT
1060 PRINT@X1, CHR$(94);                   'SEE IF THERE WAS ANY INPUT
1070 FOR X2 = 0 TO 9                       'PRINT A RIGHT ARROW
1080 B = INKEY$                             'SET TIMING LOOP
1090 IF B = "" THEN NEXT X2; GOTO 1020     'GET ANY INPUT
1100 PRINT@X1, " ";                        'SEE IF THERE WAS ANY INPUT
1110 IF ASC(B) = 91 THEN 1170               'CLEAR SCREEN LOCATION IF INPUT
1120 IF ASC(B) = 10 THEN 1200              'SEE IF INPUT WAS AN UP ARROW
1130 IF ASC(B) <> 13 THEN 1020              'SEE IF INPUT WAS A DOWN ARROW
1140 PRINT@X1, CHR$(94);                   'NOT LEGAL KEY, GOT GET INPUT
1150 X = (X1 - X) / 64 + 1                  'ENTER PRESSED, GET SELECTED INDICATOR
1160 RETURN                                'SET X TO NUMBER OF SELECTED ITEM
1170 X1 = X1 - 64                           'RETURN FOR MENU SELECTION
1180 IF X1 < X THEN X1 = X+(X0-1)*64        'SET INDICATOR LOCATION UP ONE LINE
1190 GOTO 1220                              'IF ABOVE, SET TO BOTTOM
1200 X1 = X1 + 64                           'SEE IF KEY KEPT PRESSED
1210 IF X1 = X + X0 = 64 THEN X1 = X       'SET INDICATOR LOCATION DOWN ONE LINE
1220 X3 = 0                                'IF BELOW, SET TO TOP
1230 PRINT@X1, CHR$(143);                  'SET TO BLINK INDICATOR TWICE
1240 FOR X2 = 0 TO 5                        'PRINT A GRAPHIC BLOCK
1250 NEXT X2                               'SET TIMING LOOP
1260 PRINT@X1, CHR$(94);                   'PRINT A RIGHT ARROW
1270 FOR X2 = 0 TO 19                       'SET TIMING LOOP
1280 NEXT X2
1290 IF X3 = 0 THEN X3 = 1 ; GOTO 1230     'SEE IF BLINKED TWICE
1300 X3 = PEEK ( 14656 )                   'SEE IF KEY STILL PRESSED
1310 PRINT@X1, " ";                        'BLANK PRINT LOCATION
1320 IF X3 = 8 THEN 1170                    'GO PROCESS IF UP ARROW PRESSED
1330 IF X3 = 16 THEN 1200                  'GO PROCESS IF DOWN ARROW PRESSED
1340 GOTO 1020                             'IF NO KEY PRESSED GO GET INPUT

```

Program Listing 1

hard copy terminals. The list was printed and the user asked to enter the number.

A method more advanced than specifying the number of the option desired is illustrated in the List Selection subroutine.

List Selection

This subroutine requires that the list of options be displayed on the screen. A blinking indicator is placed by the first option. It can be moved from option to option by using the down arrow and up arrow keys.

If the indicator is at the first option in the list and the up arrow key is pressed, it goes to the last option. If it is at the last and the down arrow is pressed, it goes to the first. Continuous key depression moves the cursor up or down the list.

Once the user has it positioned at the option he wants, he presses ENTER. This indicates which option is selected. At the same time, the position of the option in the list is stored in an integer variable (1, 2, 3 and so

on). The subroutine then returns control to the calling program.

Program Listing 1 illustrates one version of the subroutine. This listing is basically one statement per line. The remarks show you how the subroutine works. Program Listing 2 shows a condensed version of the subroutine. It is more efficient and uses a minimum of memory, but

is more complicated to enter into the computer. Both versions require exactly the same preparation and input, and they give exactly the same output.

Note the [left bracket in line number 1010 of Program Listing 1 and line number 1000 of Program Listing 2. It is really an up arrow.

The subroutines require the

3 ALTERNATIVE INTERFACES FOR THE TRS-80

Save by purchasing only those units that meet your needs. Want a Parallel Printer or RS-232-C Serial Port, choose the Comm-80. Plan to turn your TRS-80

into a full timesharing terminal, choose the Chatterbox. Interested in a Disk Controller plus additional memory, choose the Disk-80.

CHATTERBOX™

- 300 baud originate modem
- Centronics printer port 8-bit
- RS-232-C port (50-19.2K baud)
- connects to keyboard or I.E.
- received data automatically routed to printer ports
- includes terminal software
- only \$279.95 complete

DISK-80™

- disk controller (4 drives)
- hardware data separator
- includes 16K of RAM provision for additional 16K
- buffered TRS-BUS expansion connector
- real-time clock
- only \$329.95 complete

COMM-80™

- RS-232-C port (50-19.2K baud) software/hardware selectable
- Centronics printer port 8-bit
- connects to keyboard or I.E.
- chain up to 16 units
- use with I.E. for 2nd printer
- includes terminal software
- only \$179.95 complete

ALL INTERFACES ARE RADIO SHACK HARDWARE AND SOFTWARE COMPATIBLE AND CARRY A 60 DAY WARRANTY INCLUDING PARTS AND LABOR. ALL UNITS INCLUDE USER'S MANUAL, POWER SUPPLY & AUXILIARY TRS-BUS CONNECTOR FOR FUTURE EXPANSION.

SAFOR

Sales Analyst and Forecaster

with Graphic Display

Here is a new program from Software Etc. . . that is invaluable to any businessman. SAFOR is a time series analysis and forecasting program that will produce presentation quality graphs on your own printer. SAFOR will handle up to ten years of monthly data, provide a comprehensive analysis of past patterns and make both long and short-range forecasts.

SAFOR uses a classical time series decomposition model to provide both tabular and graphic presentations of Original Data, 12 Month Forecasts, Business Cycle, Growth Cycle, Seasonal Pattern and 12 Month Moving Average.

SAFOR can handle any type of data series measured on a monthly basis where no value is zero or less. This data may be in any unit of measure, however

SAFOR does not adjust dollar figures for inflation. The trend is calculated in the same units as actual sales, while other factors are treated as multipliers or indexes. Because the irregular component is unpredictable, SAFOR ignores it.

SAFOR is designed for ease of use, data entry is particularly straightforward, every user action is prompted. The program features extensive editing, updating, data storage and error detection routines.

SAFOR allows for varying levels of expertise in the techniques of analysis, beginner to expert. For the beginner, SAFOR contains standard default operations to help prepare routine analysis and forecasts. For the expert, key assumptions in the program are readily modified without any programming.

SAFOR will run on your TRS-80* Level II with an expansion interface, 32K of RAM memory, a disk drive, TRSDOS* and optionally a 132 column printer.

Each program comes complete with a two year set of demonstration data. Order yours now! A \$200.00 value at this Introductory Price of only

\$79.95 Good through December 31, 1980 Only.

calling program to print the list of options on the display screen. Each must be a single line. The second option must be on the line immediately following the first, the third option on the line immediately following the second and so on. There can be no blank or text lines mixed with the option list.

Integer X

The subroutines require the integer variable X as input. X contains the location on the screen of where to print the indicator for the first option. All future movements of the indicator will be in multiples of 64 screen positions.

The indicator consists of two characters printed rapidly, one after another. The first is a white square that consists of the upper four graphic cells of a graphics character (ASCII code 143—a character size square). It is printed momentarily and is overprinted by a right arrow. This is repeated at the approximate rate of three per second to pro-

duce the blinking indicator. It appears as pronounced right arrow superimposed over a white square.

The subroutines require that the integer variable X0 be input. It contains the number of options in the list and is used to de-

termine where the end is.

The subroutines cannot handle more than 15 options to a list, because there are only 16

« MISOSYS »

MISOSYS is proud to announce EOAS, a sophisticated Z-80 Editor Assembler for the '80 Model I & Model III

EOAS ***** JUST LOOK AT THESE FEATURES ***** EOAS

.. All EOAS commands and source text may be entered in either upper case or lower case providing ease of operation as a text editor.

.. Direct assembly from memory or disk by means of *GET assembler directives entered into the text buffer. This provides for a symbol table buffer area of over thirty thousand bytes with text buffer equal to your drive capacity!

.. Direct assembly to disk or memory for faster debugging operations! Branch allows you to execute your program, that has been assembled to memory, and then return to EOAS.

.. Source and object files interface directly with disk using TRSDOS (tm), VTOS (tm), or other compatible system.

.. DOS "System" command functions KILL, DIR, FREE, and LIST are available from within the environment of EOAS.

.. The Editor, with renumber, maintains command syntax identical to the BASIC editor. Global change allows the user to alter a string throughout a designated range of lines while block move relocates lines of text.

.. Great amounts of time and effort were expended to give this Editor Assembler the absolute best in ease of operation and functional efficiency. Optimize assembly programming time; use the Editor Assembler designed with the programmer in mind. EOAS is priced at \$79.00 plus \$3.00 S&H. A 72-page EOAS reference manual is included.

✓ 270

SORT-80

Produced exclusively for Mark Gordon Computers by SBSG

TRS-80* disk files may be sorted and merged using SORT-80, the general purpose, machine language, sort program. Written in assembly language for the Z-80 microprocessor, it can:

- Sort files one disk in length
- Sort Direct Access, Sequential Access and Basic Sequential Access files
- Reblock and print records
- Recontrol files from disk
- Be executed from DOS
- Be inserted in the job stream
- Allow parameter specification
 - input/output file specification
 - input/output record size
 - lower/upper record limit
 - print contents of output file
 - input/output file key specifiers

The minimum requirement is a 32K TRS-80* Level II computer with one disk drive or a single drive Model II computer. It will operate on 35, 40 and 77 track drives, and has been tested on TRSDOS 2.1, 2.2, 2.3, NEWDOS 2.1, 3.0 and VTOS 3.0.1. It is compatible with most machine language printer drivers. Sort time is fast: for example, a 32K file will sort in approximately 40 seconds. \$59.

InfoBox is the easiest-to-use information manager available for the TRS-80*. It's ideal for keeping track of notes to yourself, phone numbers, birthdays, inventories, bibliographies, computer programs, music tapes, and much more. This fast assembly language program lets you enter free-format data, variable length items and lets you look up items by specifying a string of characters or words that you want to find. You can also edit and delete items. Items entered into InfoBox can be written to and read from cassette and disk files. All or selected items can be printed on a parallel or serial printer. InfoBox occupies 3K. Specify cassette or disk version. \$29.95

*TRS-80 is a Tandy Corp. Trademark

lines on the display screen, and the subroutine prints instructions on the last.

When the subroutine returns control to the calling program, the number option selected is stored in the integer variable X. Also, the indicator at the option selected is replaced by a right arrow on the screen.

In addition to the integer variables X and X0, the subroutines use the integer variables X1, X2 and X3, and the string variable B. Any information stored in these variables when the List Selection subroutine is called will be lost. The calling program should use them as temporary variables before and after calling the subroutine.

Variables beginning with X should be defined as integers at the start of the program by using a DEFINT statement. Variables beginning with a B should be defined as strings using a DEFSTR statement. If you don't define it, the appropriate variable must be indicated with its name, including a declaration character.

Testing, Testing

Program Listing 3 is a demonstration to test the subroutines. Note the variable A\$ in line 120 of the demonstration. It contains three characters: a move cursor down character, a position cursor at the front of the line character, and a tab 25 character. By printing this string, the

would print, starting at the 25th position of the line, on the third, fourth and fifth lines of the display screen:

```
SORT
MERGE
QUIT
```

You can experiment with making up your own control strings.

"The subroutines cannot handle more than 15 options to a list because there are only 16 lines on the display screen. . . (with) instructions on the last."

cursor is set to the 25th position on the next line. A short list can then be printed with a single PRINT statement. For example, the statement:

```
PRINT @64, A$; "SORT"; A$;
"MERGE"; A$; "QUIT"
```

There is another technique shown in line 300 of the demonstration program. A CHR\$(30); is printed as the first character of the message. This causes the line to be blanked before the text is printed. If the new text is shorter than the information already on the line, no residual

text from the original contents will be left.

Line 200 of the program is an ON X GOTO statement. This is also an efficient way of executing the desired code for the option selected. It uses the integer variable X to provide the option selected.

Two Benefits

Besides having debugged code available, there are two benefits for the application programmer when using these subroutines. First, only a legal option can be selected—there is no need to use time and memory to test the input. Second, the user cannot destroy the display by entering too long a value (causing a line feed) or entering an illegal character.

Making a selection this way is easy. Because there is a direct visual link to what is being selected—both the blinking indicator and the option description text are on the same display line—there is less opportunity to make the wrong choice. ■

Introducing.....60 Cycle Sine Wave U.P.S.

(Uninterruptible Power Supply)

MAYDAY₆₀+2S

Mayday™

- for those systems that need 60 cycle sine wave keeps computer & disk systems on when the power goes out
- rated for 150, 250 and 600 watts continuous operation *
- provides up to 30 minute operation time for Model II TRS 80 with 4 disk drives

* Standard MAYDAYS available starting at \$195.00 for 150 Watt

Poor Man's Floppy

HIGH SPEED CASSETTE SYSTEM

Now the widely acclaimed
JPC Cassette System is available
for your TRS-80* computer.
The price is only \$90.00!

FOR TRS-80*

TC-8 Cassette System
JPC Products
Albuquerque, NM
Kit: \$90
Assembled: \$120

by Carl A. Kollar

I guess I don't have to tell any TRS-80 owners how frustrating the cassette system that comes with the computer can be. Even with the factory mod that's available, the annoyance of loading and checking programs becomes just barely tolerable.

If you're like me, after you've just plunked down a chunk of money for a Level II 16K machine, "you ain't got nuttin left" for even one disk drive at 500 bucks apiece. So you suffer.

A reasonable alternative is the Exatron Stringy Floppy (ESF). This will cost you about 250 bucks and totally eliminates your loading and saving problems, automatically and fast. I've had one of these for about six months and love it!

But, if the price is still too steep, have I got a device for you!

The Device

The February 1980 issue of *Microcomputing* had an ad that intrigued the hell out of me. It was a high-speed cassette system by JPC Products acclaimed as a "poor man's floppy." It made all sorts of seemingly ridiculous claims such as "loads five times faster," "stores 50,000 bytes on a 10-minute cassette," "less than one bad load in a million bytes with the volume control anywhere between one and eight."

All this for a measly \$90 bucks? How could this be? A call to Albuquerque answered a few questions: Yes, it had its own power supply, and, it stored programs five times faster because it utilized higher density data. The computer outputs the information at a higher rate out of the rear keyboard connector.

The ad had even claimed anyone could build it even if you have never soldered before. JPC would make it work, if you couldn't—for free. I was sold. I placed my order, and it arrived about two months later (parts shortage).

I work in electronics, so I found the unit exceptionally easy to build. It took about an hour. The manual is superb. (That's better than great.) It was clear, concise and exact with no

ambiguities. Important parts placements are stressed (polarity markings on electrolytics, bands on diodes, etc.).

JPC was right! With these instructions, you couldn't go wrong. The board quality is excellent. It is double-sided and parts locations are clearly marked on the component side of the board. There are no jumper wires to install. JPC utilizes PC traces and plated-through holes for connections to traces on the other side of the board.

Also, there are absolutely no adjustments or settings to bother with.

The documentation is a sheaf of 8 1/2 x 11 papers stapled together. It is written in the nicest format I've seen in a while. Each command and/or subjects is covered on its own sheet in large type. All explanations are in easy to read English—not computerese.

Commands and Features

SAVE "filename": Saves your BASIC program on cassette.

LOAD: Reads the next BASIC program from the cassette.

LOAD "filename": Searches for and loads the specified file from cassette.

LOAD? and LOAD? "filename": Reads file from cassette, and compares contents to memory.

LOADN: Prints a list of all the programs on a cassette, until interrupted by the "break" key.

LOADN "filename": Same as above except the tape will stop at the end of the program named.

KILL: Removes the file manager program from memory so that the extra memory can be used by large programs.

RSET: Allows the operator to rewind and position the tape on tape recorders that have these functions tied to the motor control jack.

RUN "filename": TC-8 searches for a specified program and runs it immediately.

PUT "filename": Same as SAVE "filename", except it is for use with system tapes.

GET: Same as LOAD, except it is for use with system tapes.

GET "filename": Same as LOAD "filename", except it is for use with system tapes.

GET? and GET? "filename": Same as LOAD? and LOAD? "filename", except it is for use with system tapes.

GETN and GETN "filename": Same as

LOADN and LOADN "filename", except it is for use with system tapes.

OPEN: Required before cassette input or output of a data file can be attempted.

CLOSE: Required to end a cassette data file.

PRINT#: Allows numerical or string data to be output to a cassette file.

INPUT#: Allows numerical or string data to be input from a cassette file.

I haven't counted them, so I don't know about the "one load in a million bytes" claim, but my son, Anthony (age 11), loaded about 30 of his programs from his Radio Shack format tape to a new TC-8 format tape. He's run them all and found no bad loads.

Unlike the standard tape system, you can position your tape anywhere before the program you want and not have to look for a blank spot between programs. The TC-8 patiently waits for the program you want and then starts loading without getting confused by the portion of the previous program you just fed it.

Try that on your regular cassette system; you'll wear out the reset button. ■

ORDER NOW

To order your TC-8 kit, send your check or money order for \$90.00 plus \$3.50 postage and handling to JPC PRODUCTS CO., 12021 Paisano Ct., Albuquerque, NM 87112 (New Mexico residents add 4% sales tax). Credit card orders accepted by phone or mail. Personal checks will delay shipment. We will otherwise immediately ship you the TC-8 kit, the cabinet, the ribbon cable, the power adapter, an instruction manual, and a cassette containing the software.

Learn the secrets of self-modifying code.

Smart Programs

Daniel Levy
2820 Willow Rd.
Homewood, IL 60430

Programs that can alter their own codes have always conjured up images of computers that may learn to rule the world, only to be foiled in the end by their human creators.

Unfortunately, when self-modifying code is attempted on a microcomputer, especially in BASIC, the end result is usually the machine being turned off, then back on, to undo the damage that was done.

One-Byte Codes

Writing a BASIC program that can modify itself means POKEing BASIC statements into the area of RAM that stores the program.

The Level II manual states that reserved words like GOTO and PRINT are stored as one-byte codes, but for some reason it never gets around to mentioning what those codes are. Since they are stored in ROM, this information cannot stay hidden forever. Program Listing 1 brings them out.

Each function has its own code. When the BASIC interpreter comes across one of these codes, it translates it into the proper word. By POKEing the proper codes into memory, statements can be changed and added to the program, by the program itself.

Now, a suitable place must be found for the statement. One solution is to have the program search to find a key word in the program text and to replace that word with the desired one. Program Listing 2 demonstrates this. Type the program, LIST it, RUN it, then LIST it again. If all went well, the last line should read 60 PRINT.

Line 10 of the program sets up a loop that steps through the program text. It begins at location 17129, since that is the address in memory where BASIC storage begins. The next line looks into the memory location and checks for 230, which is the code for CVI (a false command). If it finds it, 178 (the code for PRINT) is POKEd into that address.

The reason I chose the com-

mand CVI is because it is a disk command and thus totally undigestible by the Level II interpreter; more importantly, it is a command that would never appear in a Level II BASIC listing.

One Application

One possible application for a self-modifying code is in the evaluation of an equation that has been entered and stored as a string variable. (Those of you who have tried, know how difficult a task that is).

For example, you have just written a program that can graph any function, but unfortunately it requires, as most do, that the function be a program line. This poses no problem for you, since it is easy enough to change one line in the program. However, if you wanted your class or kid brother to use it they

```
10 K=128
20 FOR S=5712 TO 6180
30 IF PEEK(S)>128 THEN PRINT:PRINT K;" ";CHR$(PEEK(S)-
  128);:K=K+1:GOTO 50
40 PRINT CHR$(PEEK(S));
50 NEXT S
```

Program Listing 1.

```
10 FOR LO=17129 TO 20000
20 IF PEEK(LO)=230 THEN 40
30 NEXT LO
40 POKE LO,178
50 END
60 CVI
```

Program Listing 2.

would also have to change the program. Ideally, the program should input the function as a string, then evaluate it.

Program Listing 3 prints Y = on the screen, then inputs the other half of the equation and stores it as a string variable. It turns the equation into a program statement, executes it, and prints the value for Y. It could just as easily call a subroutine that will graph the equation.

It is very important when typing the program that line 130 contain CVI twice and is followed by several blanks. (The *s in the listing indicate those blanks.) If they are not there, the next line or several lines will be destroyed. This type of programming is a bit more dangerous than usual.

As before, the program steps through the memory looking for CVI. This time however, it checks for two in a row since line number 230 could be mistaken for the code for CVI. Line 70 puts the Y = in place of the

two CVIs. Lines 80-100 put the equation, stored in E\$, into the program character by character.

The next line places :REM at the end of the equation, so anything on the rest of the line will be ignored. Since the operators (+, -, *, /, ^) have their own codes as well, lines 120-150 scan through the newly implanted line to find them. Control is then transferred to lines 170-220, which act as a mini-interpreter, converting the ASCII values of the operators to the proper codes using the data at the end of the program.

The program then executes the created line and prints the value for Y. Line 260 puts the CVIs back so the program can be broken and then RUN again.

If you're skeptical as to whether or not the program is changing, then type 255 LIST. Make sure when you remove this line that the two CVIs are back in line 230.

The program is able to handle any equation, including those with variables. It is not able to

COTTAGE SOFTWARE

FOR TRS-80™ Micro Computers

PACKER: Automatically edits all or part of your Basic program to ease editing, run faster, or save memory. Has 5 sections: **UNPACK**—unpacks multiple statement lines into single statements maintaining program logic; inserts spaces and renumbers lines for easier editing. **SHORT**—shortens your program by editing out all REM statements, unnecessary words and spaces. **PACK**—executes **UNPACK** and **SHORT**, then packs lines into multiple statement lines; maintains program logic. **RENUM**—renumbers program lines including all GOTO's, etc. You specify increment. **MOVE**—moves any line or block of lines to any new location in the program and renumbers lines. Written in machine language; supplied on tape in 3 versions for 16K, 32K, & 48K. For Level II or Disk Basic. \$29.95

DISASSEMBLER: Read, write, and copy system tapes. Display and modify memory contents. Disassemble ROM, DOS, and system tapes into 2-80 mnemonics. Search for strings in memory. Much more!! Includes 32 pages of documentation and information. For 16K Level II. \$19.95

SYSTEM TAPE DUPLICATOR: Copy your system format tapes. Includes verify routine. For any Level II. \$14.95

CHESDISK: Transfers your copy of Microchess to disk for quick and easy access. For any Level II Disk system. \$8.95

CASSETTE LABEL MAKER: A mini-word processor to print cassette labels on a line printer. Includes manual and 50 peel-and-stick labels on tractor feed paper. For 16K Level II and printer. \$15.95

INSTRUCTION MANUALS for any Cottage Software original programs available for 20% of program list price. Refundable when program purchased.

If your object code crucifies your BASIC program. . .

Resurrect It!

Thomas L. Quindry
TLQ Enterprises
6237 Windward Drive
Burke, VA 22015

Have you ever lost your BASIC program through an error in BASIC or object code programming? Sometimes an error can crash your program, and, unless painstaking resurrection efforts are undertaken, all is lost.

Actually only a few bytes of the program are lost. The rest of the program still resides in memory, but without the properly set key memory locations, it is hard to make it mean anything.

Initialized Memory

When your computer is first turned on, or you enter SYSTEM (10), a series of pointers are set and some values are placed in the usable program memory area at locations 42E9, 42EA, and 4330 through 434B (17129, 17130, and 17200 through 17227 in decimal).

Most BASIC programs, however, include code in these locations, and if initialization occurs when a BASIC program is resident, these 30 bytes of memory are destroyed including the Start of BASIC Pointer, 40A4 and 40A5, and the End of BASIC

Pointer, 40F9 and 40FA. The two bytes at 42E9 and 42EA, which can also be lost when the command NEW is entered, comprise a pointer to the second line of your BASIC program.

On initialization bytes 40A4 and 40A5 point to the 42E9 which is the normal Start of BASIC Program. Sometimes, while doing other computer tricks, a programmer intentionally POKes different values into 40A4 and 40A5 so that the BASIC program starts at a different memory location. Locations 42E9 and 42EA in these cases contain zeros at start up which tell the computer that no program is in memory, and the pointer at 40F9 and 40FA is set to value 42EB, two bytes after 42E9.

To resurrect your "lost" program, then, you must correct the values at these 34 byte locations: the two two-byte pointers and the 30 bytes in the BASIC program memory area. Additionally, if you have changed the Start of BASIC Pointer, you must also replace the two bytes starting at the new address. Of course, in order to replace them you must know what these bytes are. One option is to save their values at another place in memory. These values have to

be continually updated for every change in BASIC, and it can be quite tedious, if done manually. The locations that need to be stored are given in Table 1.

Never fear, there are ways to save the byte values at these locations automatically. My machine language program (Program Listing 1) performs this operation as long as certain conditions are met. The key to this program is a "patch" through the keyboard driver routine labeled PATCH in Listing 1.

Whenever the computer looks for an input from the keyboard, it passes through a routine which looks to locations 4016 and 4017 for an address to continue to. On initialization, the address at

this location is 03E3, the keyboard driver routine. We can interrupt the computer at this point and enter our own address at 4016 and 4017 to branch to our time-sharing routine and save the needed information before returning to 03E3. Then, every time the computer looks for a keystroke, until there is a program crash, the values of our 36 crucial bytes are continually refreshed into the memory saving locations.

Operation

First the routine checks for a BASIC program. It does this by checking to see where the End of BASIC Pointer is with respect to the Start of BASIC Pointer. If

HEX	DECIMAL	
40A4	16548	Start of BASIC
40A5	16549	Pointer
40F9	16633	End of BASIC
40FA	16634	Pointer
42E9	17129	Destroyed memory (Normally coincides with
42EA	17130	nnnn—see text.)
nnnn		Next Line Pointer
nnnn		at start of BASIC
4330	17200	Destroyed memory
434B	17227	
thru		

Table 1. Bytes to be Restored after a System Crash.

no program is present, the End of BASIC Pointer address will be two bytes greater than the Start of BASIC Pointer. When this condition exists, the 36 byte values in higher memory are not changed.

Enter the RESTOR program with SYSTEM(/). The protected memory of your computer must be set to at least 32625 before the program is enabled and re-set after every system crash.

When a system crash occurs, set MEMORY SIZE, enter SYSTEM and then (/32625). The RESTOR subroutine (same name as program) then performs a block move of your "lost" bytes back to their proper locations and your BASIC program has been saved. The RESTOR program is then re-enabled.

The same procedure is used to restore your program when the NEW command has been inadvertently entered except that MEMORY SIZE is already set. If, after entering the NEW command, you wish to write a new program and not save the old one, simply enter the new program and its values will now be continually refreshed into the memory saving locations. This occurs because of our CHECK subroutine and because NEW does not disable the RESTOR program.

This routine works as long as your system crash does not lock up the computer, destroy other BASIC memory or the RESTOR memory locations. Even if some of the RESTOR memory locations are destroyed, you may be able to enter the RESTOR pro-

Program Listing 1. RESTOR Program.

gram again. This time, instead of entering (/), enter (/32625). The RESTOR subroutine automatically enables the program after returning the lost data.

I do have one word of caution. Since this program works through a patch to the keyboard routine, if you enter any program that overwrites any portion of RESTOR, you must first enter SYSTEM then (/0) to initialize the

computer. This removes the patch from the keyboard driver. Of course, your BASIC program will then be lost. If this is not done, the keyboard driver routine will be directed to ambiguous memory locations and have no way to return to keyboard control. This locks up the computer.

If you really feel it is necessary to save your BASIC pro-

gram from this untimely demise, you can either CSAVE it first or keep it by first POKEing 0s in the patch subroutine, initializing, and then entering SYSTEM (/32625). Don't try POKEing the address at 4016 and 4017, as this will lock up the computer in the process.

A cassette tape of this program is available from the author.■

DOS Machine Code Loading Technique

Tim Turner
W. 2225 Houston
Spokane, WA 99208

Most TRS-80 users need a printer but their high price presents an obstacle to some. The introduction of the Heathkit H14 brings high quality, reliable print within the range of many potential users.

Since the H14 uses an RS-232 port, and standard TRSDOS uses the parallel port, a replacement driver routine must be written.

Radio Shack supplies a sample driver in the RS-232 documentation which works with the H14 at low speeds, but fails miserably at high baud rates. Despite what the manual says the handshaking latch is not tested for "printer busy." This may be cured by adding the three instructions shown in Listing 1.

New Loading Technique

The inconvenience of loading such a routine and the occasional need to load other drivers and routines in high storage, led me to develop the following routine and general purpose loading technique.

The prologue code investigates the TRSDOS high storage

address to avoid the last 64 bytes of memory. The high address is then backed up enough to hold the resident code (lines 190-340). This protects the code from BASIC.

The starting address and relocation factor are determined

```
00510      JR  Z,STATIN ;LOOP IF NOT
00513 BUSY IN  A,(RESURT);READ MOOEM STATUS
00514      BIT  6,A ;TEST DSR FOR HI
00515      JR  Z,BUSY ;LOOP IF BUSY
00520      LD  A,C ;LOAD A W/CHAR
```

Program Listing 2.

ever, but remember to include necessary addresses in the table for relocation.

Address relocation can be avoided in this routine by replacing the two JP instructions with JR instructions.

You may load additional routines using this method without worrying about sharing the same area. The 64 bytes is skipped only by the first routine loaded.

If you don't own an assembler, use TRSDOS DEBUG to put the code in storage then key the command:

```

DUMP PRTOV/CMD (START = X'7000',
END = X'70C4',TRA = X'7000')

```

to put it on disk. This assembler presents constants in reverse backward notation (high-order byte first), although they are generated low-order byte first, so use caution in entering the hex code.

Finally, to avoid memory problems (yours, not the computer's) specify AUTO PRTOV to load the routine when TRSDOS is loaded. ■

(360-400), addresses are relocated (420-640), and the resident code is moved to high storage (660-700).

The TRSDOS print driver control block is plugged to point to the new routine (860-900). Additional

code initializes the UART registers from the RS-232 board switches, to set the baud rate and configuration options (720-840).

The setup and initialization code, which is executed only

once and not required for operation, is not retained in storage. This aids the small storage user as only 26 bytes are resident!

Additional resident code may, of course, be added to do case translation, spooling, or what-

Goodies from GALACTIC

Specialty Programs for

TRS-80 Model I - II - III

EDAS 4.0 (Editor/Assembler)

This is the highly acclaimed "USER ORIENTED" Assembler for the TRS-80 Model II by GALACTIC. Loaded with features such as assemble to memory, block move, link to debugger, default file naming, reverse video editing, warm start entry and much more. Now the programmer can write, assemble, test, and debug his code without ever leaving EDAS.

EDAS 4.0 with complete manual (120 pages)
Model II Version Was \$229.00
NOW ONLY \$179.00

MASS/MAIL SYSTEM

This is the NAME and ADDRESS system for subscription control or large mailing lists. It will handle up to 10,500 records, with a worst access time of less than 15 seconds and usual access of less than one second. All adds, deletes, and edits are instant for the operator and are then completed later in a "batch monitor". Extensive documentation and ongoing support. Requires TRS-80 Model II and 2 disk drives minimum. Contact GALACTIC direct for detailed specifications and prices for your exact needs.

Model II Version Contact GALACTIC for Price

STOCK MARKET MONITOR

This day to day market monitor is designed for the active trader. The system will track the performance of an issue against the market as well as against itself. The package comes with complete documentation and explanations of the formulas that are used by the program. The system is available for the Model I and the Model III TRS-80.

Model I and III cassette version \$89.00
Model I and III disk version \$99.00

INVENTORY MASTER

Tired of being a slave to an out-of-control inventory? Let GALACTIC'S INVENTORY MASTER put you in control of your inventory. INVENTORY MASTER operates on a TRS-80 Model I and Model III 48K disk system (Minimum of 2 drives with capabilities of up to 4 drives). Drive spanning capabilities allow you to track 2700 inventory items with 4 drive system (\$100 items for the Model III). Unique machine language sort allows for instantaneous item insertion (approx. 15 seconds with 2700 items in system). Item access can be immediate using system-supplied control numbers. Modeled after a proven main-frame system costing tens of thousands of dollars. Complete add/edit/delete capabilities supported. Placement of orders can be machine-generated as well as user-generated, with editing capabilities. Full report-generator included. Exquisitely documented.

Model I Version \$159.00
Model III Version \$259.00

MODEL II HOST I/O SYSTEM

From the original author of the TRS-80 HOST and TERM systems in the RADIO SHACK "COMMUNICATIONS PACKAGE". This system allows the full control of the HOST facility by your BASIC program. Set the number of nuls to be sent after a C/R, set a command line to be executed if carrier is lost, turn HOST on and off, switch to channel A or B as desired, enable and disable the ability for the remote terminal to "BREAK" BASIC, identify whether a character came from the HOST'S keyboard or from the REMOTE'S and more. No knowledge of assembler needed. All options may be accessed from BASIC or ASSEMBLER. Complete with detailed documentation. Don't isolate your Model II. Let outside terminals access it's computing power.

Model II with TRSDOS 1.2 \$179.00
Model II with TRSDOS 2.0 \$199.00

MAIL/FILE SYSTEM

This is the name, address, phone number, data base manager that has set the standard by which other systems are compared. This system contains advanced editing and output capabilities. The TRS-80 Model I system will handle up to 600 records per file, while the Model III version will handle up to 1150 records and the Model II will handle 2500 records per file. All versions are file compatible and maintain constant sort indexes on both NAME and ZIP CODE. International PHONE numbers and ZIP CODES are supported. Thousands of code combinations are available. The Model II version also has a "word processor" type input editor and last assembler sorting. Complete documentation is included with each version of MAIL/FILE.

Model I Version \$ 99.00
Model III Version \$149.00
Model II Version \$199.00

ULTRA TREK

This is an all new concept for this type of game, and compares to the others like chess compares to checkers. ULTRA-TREK is a complex, logical game, intended for the serious contestant. It is doubtful that you will ever master this game, but you will certainly enjoy trying this program requires a TRS-80 Level II, 16K or more. The program is written totally in BASIC and uses 15.5K of RAM.

Add a directory to your PIMS files.

Mix Your Own PIMS

David Busch
515 E. Highland Ave.
Revere, OH 44266

The nicest thing about Scelbi's Personal Information Management System (PIMS) is that it can be used and modified even by beginning BASIC programmers. It's an easy means of setting up quick-and-dirty data files when there's no time to write a custom program.

Judging from the number of articles that have appeared showing how to adapt PIMS to Disk BASIC, (see *80 Microcomputing*, Feb. 1980 "Floppy PIMS"), many users seem to have found the program a handy way to ease into the mysteries of sequential disk files.

In my own household, we still turn to PIMS from time to time. My kids faithfully enter each new comic book purchase into their respective files and tote printouts of their acquisitions to comic conventions and trading sessions. I keep track of exten-

sive book and record collections using PIMS.

I manage to keep PIMS and all the different files on a single disk, but find that it's difficult to remember the file names of the many PIMS files I maintain. What the program really needs is a directory, and I hit upon two different ways of adding this feature.

Modified PIMS

The following assumes that you have already modified PIMS for sequential disk files. The changes are simple. OPEN and CLOSE statements for input and output must be added and buffers assigned to F\$, the string variable that stores the name of the file being input or output. Some PRINT #1 and INPUT #1 statements need to have the hyphen removed. That's about it.

Adding a directory is simple for NEWDOS+ users. Just change line 160 in PIMS to read:

```
160 ON WM% GOTO 170,10000
```

and add the subroutine shown in Program Listing 1. At that point, the program requests a CMD DIR, and displays the entire disk directory of visible files. If only PIMS data is kept on the

disk, then just PIMS itself and its data files will be displayed. The subroutine asks for the file name of the desired PIMS file, then sends control back to the main program at line 1914.

Users of TRSDOS 2.3 or other systems not allowing a directory read without exiting BASIC can still add the feature to their PIMS. This subroutine is a little longer.

Program Listing 2 shows the few changes needed to PIMS itself. Line 130 changes option number two, load from cassette to load from disk, and adds a third choice, update index.

Choosing either of the latter two choices sends the control to the subroutine at 10000, but the (load from disk) option sets the value of variable FLAG to 1.

Lines 10000-10100 is an input routine that lets the user decide whether to add a file name to an existing index, or create an entirely new one. Remember, if you create a new index, the existing one will be overwritten. The create index option should be reserved for initializing a new PIMS disk or starting over with a new directory.

Lines 10105-10170 read the existing index, either for update or display. If FLAG = 1 (indicat-

ing that the user is accessing a file), the update portion of the subroutine is skipped.

The array IN\$(n), read from the disk file PIMINDEX, if it exists, is added to in lines 10180 = 10320. If the index is just being created, N is incremented from one. Otherwise, the next file name added is placed in the array after the last one in the existing index. The lengthened sequential file is saved to disk.

Finally, lines 10410-11030 format and display the file names on the screen in two columns. The user supplies the file name of the PIMS data file desired, that string is assigned to F\$, and the program branches back to the main program at line 1914.

Suggested Modifications:

The array IN\$(n) is shown on line 10010 for clarity; it can be moved to the beginning of the program with the other DIM statements. The user can make this array larger. However, TRSDOS 2.3 will only allow 47 files per disk.

It is probably best to have a separate PIMINDEX for each disk that your PIMS inhabits. That eliminates loading a file that is located on another disk

the kim challenge

From Rudyard Kipling's KIM, General Computer brings you an adaptation of the exciting, mind expanding game of memory and recall. KIM uses dynamic handicapping to compensate for skill differences while urging each player into greater challenges. Everything adjusts—display times, number of objects displayed, identification difficulty, and even scoring as you play your way through a data-base of thousands of items. Quicken your perception, sharpen your awareness, and

develop an elephant-like memory ... while enjoying the competitive excitement of playing KIM.

- An exciting two player game with competitive skill-difference handicap scoring (Junior could beat daddy every time!)
- Or, A challenging single-player contest
- Includes a BASIC source listing as part of a trend-setting manual

KEEPIT — Version 2.0 Enhances Level II Basic!

KEEPIT adds these function:

- Save a running BASIC program with variables
- Restore a program accidentally deleted by "NEW"
- Observe and change memory locations directly
- Save a block of memory as a system tape

KEEPIT also features:

Keyboard debounce, audible beep and autorepeat! KEEPIT is written in machine language and resides in less than 1,000 bytes of high memory. EDTASM source code is also supplied so the user can relocate the program at any convenient location.

How to order KEEPIT:

Level II users will find KEEPIT to be an extremely valuable utility as well as a frustration saver. To receive your copy, send you name and address, along with \$9.95 + to:

ZBASIC is an "interactive Compiler". This means it is resident while you write your basic programs. You may compile your program and run it or save it, without destroying your resident basic program! In fact, jumping back and forth between your compiled program and your basic program is one of its best features!

Simutek's compiler allows saving your "compiled" programs to tape or disk. Programs may then be loaded by use of the system command for tape, or as a /CMD file from DOS. This makes it extremely hard for people to "pirate" your programs.

Best of all, Simutek does not charge royalties on programs you sell that are compiled with ZBASIC! (Microsoft charges 10% or \$200 a year!)

Why use a complicated "Assembler" to write machine language programs when you can write them in ZBASIC?

Some of the basic commands supported by ZBASIC:

FOR	NEXT	STEP	IF	THEN	ELSE	PEEK	ON GOTO
SET	RESET	POINT	CHR\$	RANDOM	RND (I)	POKE	ON GOSUB
DATA	READ	RESTORE	END	GOTO	GOSUB	CLS	ON GOSUB

TRS-80 is a TM of Radio Shack a Tandy Corp

by mistake.

However, it is a simple step to write a program that reads in the PIMINDEX from a number of disks and sorts them for a Master Index or formats them for output to a printer.

If you have that many PIMS

files, you're probably long overdue for some custom-written database management programs. I've found that working with the Scelbi program, and modifying it for my own needs, was the best possible training for my own programs.■

Build this protection device for your cassette's relay.

Look, A Snooper/Snubber!

Philip O. Martel
748 Tyler Street
Pittsfield, MA 02101

The relay that controls the TRS-80's cassette player is subject to high voltage across its contacts when it's turned off.

Radio Shack gives the relay some protection with two 75 volt zener diodes across the contacts, but this isn't always enough. The relay sometimes welds shut.

When this happens, you can remove the remote plug from the recorder and operate it manually. Eventually, the relay unsticks. Or you can try the snooper/snubber.

Easy to Build

The snooper/snubber, a small easy-to-build electronic circuit, monitors the TRS-80's cassette interface and gives the relay extra protection. The snubber circuit (Fig. 1) gives the motor current some place to go when the relay contacts open, so that the current doesn't try to jump

across the contacts and weld them together.

The snubber can be placed anywhere between the relay contacts and the cassette recorder motor. To avoid breaking any of Radio Shack's seals, I put the snubber circuit in a small box, plug the remote from the TRS-80 into the box, and run a jumper cable with subminiature phone plugs from the box to the recorder.

In addition, a push-button switch across the circuit lets me advance the tape in play mode.

The snooper (Fig. 2) is a simple means of monitoring the audio signals into and out of the TRS-80. The snooper consists of five miniature phone jacks, a crystal earphone, a double-pole double-throw (DPDT) center off-switch and some shielded cable.

Two of the jacks accept the earphone and auxiliary plugs from the TRS-80. Two others pass out the same signals to the cassette recorder via jumper cables with miniature plugs on each end.

The fifth jack passes one of the two signals to an external device, such as an amplifier.

You'll need one, if you are running programs that produce sound.

The DPDT switch determines which of the two signals—the earphone signal (to the TRS-80) or the auxiliary signal (from the TRS-80) is passed to the fifth jack end to the crystal earphone. The crystal earphone outputs a low-volume signal, audible, but not loud enough to require a volume control.

When you record a tape, the volume level may be slightly greater. If you listen to the earphone line. If so, it is because your recorder sends out an amplified version of the input on the earphone line while recording.

Construction

If you have some experience in electronics, you can build the snooper/snubber from the schematic diagrams. If not, I've provided some guidelines.

Build your snooper snubber in a plastic box. If it's metal, you

may encounter ground loops. These cause a loud, low-pitched buzz on recorded tapes. A box about 2 x 3 x 4 inches is a good size. You can use one half this size, but unless you like repairing watches or constructing ships in bottles, it's likely to prove frustrating.

You can lay out the components any way you like. Mine has the jacks for the TRS-80's cable in front, the jacks for the jumper cables in back, the fifth jack on one side and the two switches and earphone on top.

Drill the holes and mount the components loosely. (Miniature jacks take 1/4-inch holes and subminiature jacks take 3/16-inch holes.) How you mount the earphone depends on its shape. If the earphone is flat, drill several small holes and glue the earphone behind them. If the earphone has a roughly cylindrical earplug, drill a hole to fit the earplug and glue the earplug to the box.

Take the shielded wire and

Fig. 1. The Snubber Circuit.

Fig. 2. The Snooper Circuit.

run it between the jacks and switches to measure how much is needed. Leave an extra inch and a half on one end of each piece of wire as it is cut. This may seem like a lot, but it is much better to stuff any extra length of wire into the box than to come up a tenth of an inch short.

Before you solder the circuit together, remove all the components from the box and put it well away from your soldering iron. The affinity that plastic boxes have for hot soldering irons, you cannot believe.

Soldering

The wiring is straightforward, but most of the parts, especially the jacks, are fairly small. You aren't going to get all the wires from the shield through those little holes in the jacks. Cut off

about half of the wires very close to the insulation and things will go much easier.

Make sure that all the remaining strands of the shield are twisted together. One tiny, almost invisible strand of wire can short out one of the signals. This condition is not likely to damage anything, but the time spent trying to track down a short can be frustrating.

The DPDT switch (Fig. 3) has a 3x2 array of contacts on the bottom. All the shields should be connected to one set of three contacts, and all of the center wires to the other set of three contacts.

The shielded wires can be run from one jack to the other and then to the switch, or from one jack to the switch end then to the other. I recommend the second approach, since it puts the

point where the two shielded wires join at the switch, which usually has larger contacts than the jacks.

The specific values given for the resistor and capacitor are not critical. Anything within a factor of about three should work fine. That is, the capacitor should be between about 0.3 microfarads (μF) and 3 μF , and the resistor should be between about 3 Ohms (Ω) and 30 Ω . The capacitor and resistor are soldered together by one lead and soldered to the normally open push-button switch by the other (Fig. 4).

The earphone should be a high impedance type. A crystal earphone is specified, but any type with an impedance of 10K Ω (10 kilohms = 10,000 Ohms) or more will work. The high impedance minimizes loading and re-

```
10 OUT 255.4
20 FOR I = 1 TO 1000: NEXT I
30 OUT 255.0
40 FOR I = 1 TO 1000: NEXT I
50 GOTO 10
```

Listing 1. Test program.

sults in a fairly low volume.

Once you have the snooper/snubber assembled, normal use of the cassette recorder will test it. If you would like to give the snubber a thorough test, run the program shown in Listing 1. It will turn the cassette motor on and off once within a period of about five seconds. I ran this program for more than 1000 cycles of the relay with no trouble. Not bad considering that the relay had failed the first day I used my TRS-80. ■

PRIORITY ONE ELECTRONICS

A radial line drawing program for art's sake.

Images

Buzz Gorsky K8BG
2449 Derbyshire Road
Cleveland, OH 44106

In the past I've written some application and utility programs for *80 Microcomputing*, but this article is *useless*!

A Series of Lines

The program shown in the listing generates a series of lines like the spokes of a wheel from a randomly chosen point on the screen. It will then draw another pattern, delay, then clear the screen and start again. Let's see how it's done.

Starting at line 100 the K loop goes from one to two to draw the two patterns. X1 and Y1 are chosen randomly as values up to 127 and 47, respectively, so that the pair (X1,Y1) points to a random point on the display in the format used by SET statements. This point will be the center for the radiating line pattern.

Then, in line 110, T runs from zero to 170 drawn in increments of 10. T represents the angle in

degrees (in this case 10) at which each line drawn will radiate. Since each line will run through the center of the circle, we only have to let T go this far.

When T is 90, a vertical line is needed. This is drawn by the FOR-NEXT loop involving L. In line 120, T1 is set equal to T times a constant to change the degree value to a radian value.

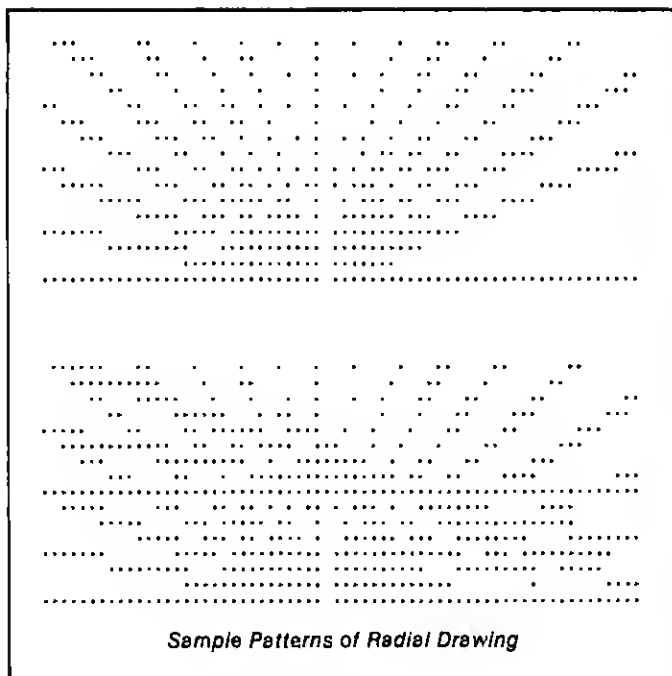

In line 130 X will run through the limits of the values which can be displayed. Y is then set equal to X times the tangent of T1. $Y = X \cdot \tan(\theta)$ is the equation for a line in a polar coordinate system.

Then in 150, X2 is set equal to $X + X1$ and $Y2 = Y + Y1$. This moves the point (X,Y) from the origin of the plot (the upper left of the screen) by an amount determined by X1 and Y1.

In line 160 we check to see if the values of X2 and Y2 can be shown on the screen with a SET (X2,Y2) statement. If so, they are displayed at 170, and if not we go to 180. There we set $X2 = X1 - X$ and $Y2 = Y1 + Y$. This then reflects the line just drawn through the center of the circle.

If the values of X2 and Y2 can be displayed, then the SET

Sample Patterns of Radial Drawing

statement displays them. Otherwise what happens depends on the value of Z.

If the first half of the line had terminated because values were off the screen, then Z would equal one. If this part of the line were also off limits, then we would reset Z equal to 0 and go to the next value of T. However, if Z were zero, then we would go to 190 and the next value of X. When X was completed we'd

have the next value of T. In this way each half of the line is finished until it reaches the limits of the display.

In line 200 there is a short wait and then the second pattern is drawn by going to the next value of K. A long delay follows after which the program is run.

It's useless, I know, but fun to watch, and the radial line drawing technique might even find a place in something useful! ■

```

98 REM RADIAL LINE DRAWING PROGRAM BY BUZZ GORSKY, X08C

Program Listing

NOW AVAILABLE for use with TRS80 Level II (16K)

Baseball & Soccer COMPUTERIZED GAMES

Realistic! Exciting! Based completely on the statistics of actual players and teams.

WCS SOCCER is a sophisticated, computerized game that demands strategic decisions! Each player is rated in at least 6 categories for both offense and defense. Easy to use, but complicated enough to challenge the most accomplished gamesman. Play a full game in only 30 minutes. 16 all-time great teams & dozens of top players, including Pele and Beckenbauer. Price: \$21.00.

DFC BASEBALL ABSOLUTELY the finest simulated sports game available for home computer use. DFC is not a mere graphics, random play game — DFC is a highly sophisticated simulation program. Hundreds of different plays — including over 50 different types of infield outs!! Complexity only possible through the selective calculations of home computers. The computer compares each and every characteristic of a particular batter against a particular pitcher and defense for a degree of realism never before possible.

AS MANAGER OF A REAL MAJOR LEAGUE TEAM, YOU CONTROL EVERY ELEMENT OF PLAY ACTION. You make every managerial decision available in major league baseball based on the real ability of your players.

12 TOP TEAMS OF THE 60's and 70's INCLUDED.

Each team contains the names of 25 players and is loaded directly from tape into the program. Price: \$21.00

BOTH GAMES INCLUDE A MANUAL AND PROGRAM TAPE WITH FIELD GRAPHICS AND PROGRAMMER TIMER!

ORDER DFC BASEBALL AND WCS SOCCER FROM: GAMECRAFT CO., BOX 2299, STATION A, CHAMPAIGN IL 61820. GAMES ARE \$21.00 EACH. ORDER TODAY or write for FREE Computer Games Brochure.

PERIPHERALS for TRS-80

IBM 725 ASCII/ELECTRIC PRINTER

- Full-size 15" Carriage
- Includes 3 built-in ASCII to IBM translation tables for different type balls.
- Plugs to Line Printer Port and runs from "LPRINT" and "LLIST" commands.
- LOCAL mode allows manual use of typewriter keyboard.

- Ship wt. 75 lbs. PRICE, cleaned & adjusted \$395.00
- Optional Forms Tractor for pin-feed paper (used) . \$ 75.00

DIABLO HYTYPE I DAISY-WHEEL PRINTER

- 30 cps bi-directional printer
- Graphics plus letter-quality print.
- Includes power supply, case, platen, print wheel, interface PCA and cable to TRS-80 40-pin BUS.
- Responds to "LPRINT" and "LLIST" commands.

- Ship wt. 65 lbs. PRICE, refurbished & tested, complete \$1495.00
- HYTYPE I Printer Interface PCA and cables, sold separately \$249.95

OTHER PRODUCTS:

- POS 103/202 Dual-Speed Auto Answer Modem
- POS 100 NRZI 1/2" Mag Tape Drive Controller/Formatter
- Power Supplies, Forms Tractors, AC Line Filters, etc.

A logical approach to graphics.

Inside-Out Debugging

Del Ogren
565 B Lynn Ct.
Glendale Hts., IL 60137

A friend of mine has the best standard answer to the standard question posed to all new micro owners. When asked, "What are you gonna do with it?" he replies, "Make it teach me to use it." My purpose in writing this article is to attempt to make the process of learning to use a computer more enjoyable.

Specifically, I want to discuss graphics programming techniques for Level II BASIC. I'll develop a simple game program to illustrate some of the techniques presented.

Programming Style

Unfortunately, a machine has yet to be designed that translates ideas directly into computer code. This means that the user must do the translating. Learning to program is a process in which the programmer develops rituals, based on experience gained through dialog with the machine. As the error messages become less frequent, a programmer develops a style of going about the task of telling his machine what to do.

By "talking to computers," I have fallen into using what is sometimes called the "inside-out" style of programming. This style is made up of bits and pieces of "structured," "top-down" and "modular" programming and seems well suited to recreational programming.

Inside-out Programming

Inside-out programming divides a program into two major sections, a control section and a routine section. The routine section is a list of subroutines which make up the body of the program. The control section is

generally a loop which calls the relevant subroutines in sequence. As ideas come to mind, a subroutine or two is added to the routine section and patched into the control section by adding GOSUB.

Say, for example, we want to create a space war game. First, we need space ships. We would write subroutines to draw them on the screen, and try them out by putting GOSUBs in the control section. We can then add animation, laser fire, photon torpedoes, fuel allocations, etc., patching in each new idea as it is developed.

As each routine is linked to the system, it can be run. Thus errors are quickly detected and easily resolved. Part of the programming burden is transferred to the computer and the whole development process takes place as a dialog with the machine.

Here are some techniques which should help you to think inside-out:

I generally leave the first 1000 lines or so for the control portion of the program and the remain-

der for the routines. Also, the first 1000 lines hold the house-keeping statements, starting values for variables, etc. Leaving plenty of room for expansion is important, if you are to avoid the disgusting task of re-typing large segments of code.

The most useful command in the book is GOSUB. True, it takes more memory and more time to execute than GOTO, but for program development it's the easiest way to patch in each segment as it's created. You can always go back and change the GOSUBs to GOTOs when the program is finished. (Determining when a program is finished is almost impossible—there's always just one more feature to add.)

Use comments. Here again, comments waste space but they also save a lot of development time. I begin all subroutines with a comment telling what it does, what input is required and what output comes from the routine. That way questions like, "How did I get that photon torpedo to go across the screen?" are easily answered.

If I have a subroutine that starts at 1000, my comments will be on line 998 or 999 and the calling routine will contain GOSUB 1000. That way the remarks are never executed and little run time is wasted.

When programs begin to grow, things can get out of hand. It is a good idea to keep a list of subroutine locations and important variable names as you go along. If a variable is local (only used in the subroutine), then it can be used locally in other routines, but if it is global (used throughout the program), it must be well controlled.

Once you get really wild with inside-out programming, some control sections can run as subroutines of subroutines of the control section When a program gets this far, good documentation is an absolute essential.

TRS-80 Graphics

Graphics are an important part of fun programs, so before we do some inside-out programming, let's take a look at TRS-80 graphics.

Unless you want to get involved in assembly language programming, POKE is the best command for producing graphics. SET and RESET take longer to execute and are more useful for graphing mathematical functions than for interactive interplanetary warfare.

On page D/1 in the Radio Shack Level II Manual is the memory map. You can see that the video memory, which stores the current state of the screen,

***"The obvious solution
is to go mosquito hunting,
but, being a true computer nut,
you are inspired to write a program
to sharpen your swatting skills."***

is located between address 15360 and 16383 inclusive. These addresses are used in POKEing graphic symbols onto the screen.

Fig. 1 shows the beginning and ending address for each line on the monitor. Typing POKE 16320, 191, for example, will put an all white graphics character at the lower left corner of the screen.

Before you start POKEing around in memory, it's a good idea to CSAVE a backup copy of your program. If there is a not-too-well written routine in your program, it could POKE into the wrong place, bomb your BASIC interpreter and wipe out all your work.

Since there are 64 characters, or graphics blocks per line, adding 64 to the POKE address moves the image down one line on the screen, and subtracting 64 moves it up one line. Likewise, adding one to the address moves the image right, and subtracting one moves it left.

15360	15423
15424	15487
15488	15551
15552	15615
15616	15679
15680	15743
15744	15807
15808	15871
15872	15935
15936	15999
16000	16063
16064	16127
16128	16191
16192	16255
16256	16319
16320	16383

Fig. 1. Decimal addresses in video memory. Be careful not to POKE outside the upper and lower boundaries.

The Level II Manual (page C/6) gives the decimal values (just right for a POKE) of all the graphics characters. With a piece of graph paper and a bit of effort it's a simple matter to come up with all sorts of things to POKE into video memory. Fig. 3 shows some examples.

The PRINT@ statement (see Level II manual p. 3/3, and C. F. Gerald, May 79 *Kilobaud Microcomputing*) is valuable for graphics programmers. In his article Mr. Gerald includes a very useful table for determining where PRINT@ will place its characters (page 101, Fig. 2).

My favorite use of this statement has been: PRINT@ 960, "↓". The ↓ will not appear on the screen but is a line feed and will cause everything on the screen to move up one line. This can be used to move the galaxy past your spaceship in one statement.

Of course the line feed will move everything on the screen up so you will have to move the spaceship down to keep it in view.

INKEY\$ lets BASIC read the

keyboard without stopping the program and allows the user to interact with the program.

Inside-out with Graphics

Now we'll get the feel of some inside-out programming using TRS-80 graphics.

Let's say that you are sitting at the computer being pestered by a mosquito. The obvious solution is to go mosquito hunting, but, being a true computer nut, you are inspired to write a program to sharpen your swatting skills.

First, you need data to POKE into video memory so that you can create an insect. With some graph paper you discover that if 140, 157, 157 and 157 are POKEd into sequential video memory locations, a six legged critter will appear.

Once the data are generated, it is a simple matter to write a subroutine which places the bug on the screen, given some memory location at which to start POKEing.

```
999 THIS MAKES A BUG STARTING AT
VIDEO MEMORY ADDRESS X
1000 "POKE X,140:POKE X+1, 157:POKE
X+2,157:POKE X+3,157"
1010 RETURN
```

To try out the bugmaker routine we can type:

```
10 CLS
20 PRINT@ 0, "WHERE DO YOU WANT
THE BUG? 15360-16380":X
30 CLS:GOSUB 1000
40 GOTO 20
```

When we RUN this, we can put a bug anywhere on the screen. Note that the largest number to enter should be 16380, even though the video memory goes through memory location 16383. This is to avoid

Fig. 2. Decimal data for POKEing into video memory. When generating your own images, a good rule of thumb is to make each pixel in your drawing twice as tall as it is wide.

POKEing outside the video memory—no one wants bugs in his bugmaker.

Since insects seldom show up on demand, it seems that the bug's location should be random, so we'll change line 20 to:

```
20 X = RND(1021) + 15359
```

Now X will take on a random value between 15360 and 16380. When we RUN the program the insects will appear all over the screen.

It would be nice to be able to move the critter left, right, up and down so we come up with the program in Listing 1.

Note that the routines are

documented and that the first line after each comment tests to see if the insect is too near the edge of the video memory. Also note that the location of the bug is updated by each subroutine and that 128 (no pixels lighted) is POKEd into the space vacated by the moving insect. In these routines X is a global variable and Y is local.

If at this point we change line 40 and add line 50 as follows we will get a bug that moves randomly around the screen.

```
40 ON RND(4) GOSUB 1100,1200,1300,1400
50 GOTO 40
```

Now that we have created a monster it would be nice if we

could have some control. Since it's no fun to stop the action for an operator INPUT, we will use INKEY\$. Changing line 50 and adding lines we get:

```
50 AS = INKEY$
60 IF AS = "R" GOSUB 1100
70 IF AS = "J" GOSUB 1200
80 IF AS = "H" GOSUB 1300
90 IF AS = "T" GOSUB 1400
100 GOTO 40
```

The insect still moves randomly, but now we can influence its position by pounding away at the keyboard, R for left, J for right, H for down and T for up. Of course, any key can be substituted (except BREAK!), but my hands seemed to fall on these keys naturally.

```
100 IF AS = "V" GOSUB 1500:END
110 GOTO 40
```

Now we can take aim at the bug and make an attempted kill by hitting the V key. This stops the action, so that we can see if our efforts were effective in reducing the insect population.

At this point, we have everything we need for maneuvering our victim into position for the death blow, but we do not have an engine of destruction. Though it's possible to get fancy here (laser fire seems a bit much just to kill a mosquito), let's just plop down a square in the middle of the screen with the following subroutine:

```
1499 'SWAT AT SCREEN CENTER
1500 FOR Y = 15834 TO 15841
1510 POKE Y,191:POKE Y + 64,191
```

1520 NEXT Y
1530 RETURN

Patching this subroutine into the control portion of the program is possible by changing line 100 and adding 110:

Thus far our insect has been more like a crawling bug than a flying mosquito. Eliminating line 40, changing line 110 and adding 120 as follows changes the character of the game.

```
Delete line 40
110 IF RND(100)>.95 GOTO 20
120 GOTO 50
```

Once this is entered and run, the insect ceases to move randomly, but each time through the control loop there is a five percent chance that the mosquito will fly off to some other location. Note what a small change is required to greatly alter the nature of the program.

Obviously, it is possible to add scoring to the "swat" subroutine, by testing the current value of X to see if the bug is in range and adding subroutines to display the number of hits and misses, along with cute phrases like "got me!"

The subroutines presented are not limited to working out your anti-insect fantasies. With some simple alterations it is possible to go after all sorts of villains: sharks, the boss, invaders from space . . . The possibilities are endless. ■

```
1099 'THIS MOVES THE BUG LEFT. X = LOCATION, RETURNS X = X - 1
1100 IF X - 1 < 15360 RETURN
1110 FOR Y = X TO X + 3
1120 POKE Y - 1, PEEK(Y)
1130 NEXT Y
1140 POKE Y - 1, 128: X = X - 1: RETURN
1199 'THIS MOVES IT RIGHT. X = LOCATION, RETURNS X = X + 1
1200 IF X + 1 > 16380 RETURN
1210 FOR Y = X + 4 TO X + 1 STEP - 1
1220 POKE Y, PEEK(Y - 1)
1230 NEXT Y
1240 POKE Y, 128: X = X + 1: RETURN
1299 'THIS MOVES IT DOWN. X = LOCATION, RETURNS X = X + 64
1300 IF X + 64 > 16380 RETURN
1310 FOR Y = X TO X + 3
1320 POKE Y + 64, PEEK(Y): POKE Y, 128
1330 NEXT Y
1340 X = X + 64: RETURN
1399 'NOW UP X = LOCATION, RETURNS X = X - 64
1400 IF X - 64 < 15360 RETURN
1410 FOR Y = X TO X + 3
1420 POKE Y - 64, PEEK(Y): POKE Y, 128
1430 NEXT Y
1440 X = X - 64: RETURN
```

JOE COMPUTER* Presents Exclusive Software: IT'S FOOTBALL SEASON!

Pro and College Football from SBL:

A TRS-80 translation of Ken Perry's popular Apple programs. These programs predict point spreads with unbelievable accuracy. They are heuristic and require about 10 minutes a week to record the weekend's results into the data base from your local newspaper. You may predict any game within seconds from the data saved on cassette or disk. Pro Football contains all 28 pro teams. College football contains an unbelievable data base of 78 teams! Each program comes with the entire 1979 season data file on cassette or disk. You can display each team's record of scores or win-loss record. A record of 4-5 weeks is required before predictions are effective so you're just in time! Pro or College Football will be shipped U.P.S. blue label the same day order is received. Order C.O.D. by phone. \$1.00 blue label charge; C.O.D. fees added on.

Pro Football Cassette (32K TRS-80 Level II)	\$21.95
Disk	\$26.95
College Football Cassette (48K TRS-80 Level II)	\$21.95
Disk	\$26.95

Horse Race Handicapping!

Probability Handicapping Device 1 was written by a professional software consultant to TRW Space Systems. This is a complex program carefully human factored for easy use. It is a comprehensive horse racing system for spotting overlays in thoroughbred sprint races. Your computer will accurately predict the win probability and odds line for each horse based on your entries from the racing form. The next day overlay horses can be spotted on the track tote board. The users manual contains a complete explanation of overlay betting plus much more useful information. The appendix contains a detailed tab run of a 100 consecutive race system workout showing an amazing 50% return (\$50 returned for each \$1.00 flat wager). Includes many features such as error correction, bubble sort, line printer output, archiving, etc. The manual may be ordered separately for perusal for \$7.95 and credit. COLLEGE BOARDS

The best way to sharpen your skills for the College Board SAT Exams is to work on actual examinations. Each of these 4 programs confronts the user with a virtually limitless series of questions and answers. Each is based on past SAT exams and presents material of the same level of difficulty and in the same form as used in the verbal and mathematical portions of the College Board Examinations. Scoring on each exam is provided in accordance with the formula used by College Boards.

COLLEGE BOARD—VOCABULARY	19.95
COLLEGE BOARD—WORD RELATIONSHIPS	19.95
COLLEGE BOARD—MATH PART A	19.95
COLLEGE BOARD—MATH PART B	19.95
Complete Set	59.95

TIME TRAVELER

The best of the adventure games. Confronts player with complex decision situations and at times, the demand for real time action. Using the time machine, players must face a challenging series of environments that include: the Athens of Pericles, Imperial Rome, Nebuchadnezzar's Babylon, Ikhnoton's Egypt, Jerusalem at the time of the crucifixion, the Crusades, Machiavelli's Italy, the French Revolution, the American Revolution and the English Civil War. Deal with Hitler's Third Reich, the Vikings, etc. Involve yourself with historical military and government operations, markets, etc. in fascinating game situations. Each game is unique! \$24.95

THE SWORD OF ZEDEK

Fight to overthrow Ra, the Master of Evil. In this incredible adventure game you must confront a host of creatures, natural and supernatural. To liberate the Kingdom, alliances must be forged and treasures sought. Treachery, deceit and witchcraft must be faced in your struggle as you encounter wolves, dwarves, elves, dragons, bears, owl, orcs, giant bats, trolls, etc. Each game is unique in this spectacular and complex world of fantasy. \$24.95

Call it what you like, this program will still read disk directories, number programs, and run them with one keystroke!

You Can Call It . . . Ray

Barry Kornfeld
190 Waverly Place
New York, NY 10014

This program only works with NEWDOS (unless you are looking for yet another way to get into DEBUG).

I've seen a number of ads for disk menu programs, all of which require typing the program names. For this they want ten bucks?! What's the point of having a computer if you have to do all the work? And at the rate I juggle programs around on my disks that would be a lot of work.

What I really wanted was a menu program that would read the directory for me. Alas, it

takes a more knowledgeable soul than I to write a program that can read a disk's directory track.

But, calling a directory and PEEKing the video screen memory locations is a roundabout way to get to the same place.

Read the Directory

DIRPICK is a BASIC program which reads the directory of the disk drive of your choice, numbers the programs, and runs any BASIC or /CMD file by entering its number.

CMD"DIR gets the directory onto the screen. As you can see in Example 1, the program titles appear at 20 character intervals across the screen. Each line is 64 characters wide.

Variable Z counts the three programs across the screen and variable Y counts lines. Since the start of the first program name is always location 15488 (3C80H), the starting location of each succeeding name (variable L) is $15488 + 64 * Y + 20 * Z$ (Line

230).

Line 260 PEEKs the screen memory and stores the characters in the A\$ array. Variable C moves the PEEK to the next memory location. Variable P numbers the programs. Line 280 tests for blanks (ASCII code 32). When a blank is encountered, DIRPICK assumes that this is the end of the program name. It then jumps to Line 300, which replaces the original program name with P\$PROGNAME (see Example 2), and moves on to the start of the next program name.

Line 290 tests for a null string. A null string means no more programs, so DIRPICK jumps to the program-call section (Lines 330 to the end). Lines 350 to 370 save you the trouble of hitting the enter key, if there are nine programs or less.

If you have more than thirty programs on a disk (I know it's possible, but I've got to see it to believe it!), you will have to increase the CLEAR statement in

```

for the TRS-80 from Micro-Mega

The Original GREEN-SCREEN

The eye-pleasing Green-Screen fits over the front of your TRS-80 Video Display and gives you improved contrast with reduced glare. You get bright luminous green characters and graphics like those featured by more expensive CRT units.

Don't confuse the Original Green-Screen with a piece of thin film stuck to the face of your video tube, such as that advertised by others. The Original Green-Screen is mounted in a full frame perfectly matched to the color and texture of the TRS-80 Video Display. It is attached with adhesive strips which do not mar your unit in any way.

The full frame design of the Original Green-Screen "squares off" the face of your video display and greatly improves the overall appearance of your system.

THE GREEN-SCREEN.....\$13.95
Add \$1.00 for postage and handling.

Terms: Check or money order, no C.O.D.s or credit cards, please. Add amount shown for postage and handling to price of the item. All items shipped within 48 hours by first class or priority mail. Virginia residents, add 4% sales tax.

THE SOFTWARE DIRECTORY

A Comprehensive Guide to Programs

Now, you can have access to hundreds of computer programs, quickly and easily.

The Software Directory lists available programs for major home and small business computers, including Apple...Atari...North Star...Radio Shack...PET...CP/M Systems and more.

Indexed for fast and easy reference, Directory categories include games, education, utilities, home accounting, and professional business programs. It's organized according to computer type, so you can find the programs designed for your computer, fast.

The Software Directory describes each program, and lists the minimum required system, program price, ordering information and vendor address.

The Software Directory has all the information you need for ordering any of the hundreds of software programs available. To get it, send a check or money order for \$9.95 to Software Central. We'll send you a software reference book you'll use time and again.

HI-RESOLUTION GRAPHICS FOR TRS-80*

INTRODUCING:

E/RAM

E/RAM Graphics is a unique hardware/software package, which will integrate high-speed, high resolution graphics into any Level II TRS-80 system. E/RAM hardware is a fully plug-compatible box, which installs in minutes, and requires absolutely no modifications to the TRS-80 system. E/RAM software is a compact, relocatable set of utilities which provides the user with easily accessible graphics functions. For instance: the user pokes the end point coordinates of a line into certain locations, does a USR call, and an optimized dot-raster line is automatically drawn on the screen at very high speed (less than 10 milli-seconds for a medium length line).

E/RAM does not require the purchase of an additional monitor CRT. The high-resolution graphics video is synchronized with the TRS-80 video and appears on the screen with the normal TRS-80 display. Alphanumeric, TRS-80 graphics, and E/RAM high-resolution graphics may be displayed simultaneously or individually.

E/RAM hardware contains its own 6144 byte video memory, which provides a true 256 x 192 matrix of independent graphic elements. (E/RAM is NOT a programmable character generator type graphics system. Character generator systems have serious limitations in full screen graphics applications.)

E/RAM will operate with or without an expansion interface, and with any standard memory configuration (4k through 48k).

E/RAM is fast. "E/RAM" is an acronym for Extended Random Access Memory, a very short description of the Patent-Pending method of I/O employed by this device, which gives it memory-mapped speed without interfering with the memory space used by the TRS-80.

The installation of E/RAM will not affect normal operation of the TRS-80. High resolution ON/OFF is under program or manual control (a switch is provided). An expansion card edge connector is provided so that other peripherals may be used on the TRS-80 bus.

E/RAM software package is compact (less than 1000 bytes), fast, easy to use, and very flexible. A relocating loader is provided. The user can delete unneeded routines if more memory space is required. Lines can be drawn as fast as 13 per second using BASIC USR calls, and as fast as 200 per second using assembly language programs.

Routines usable through USR of BASIC, and of course an assembler CALL are:

INIT	- Sets up display
PLOT	- Plots a point
READ	- Reads a point from the screen
BLACK	- Sets drawing mode to black (off)
WHITE	- Sets drawing mode to on
CLEAR	- Clears the high-resolution graphics screen
LINE	- Draws a line

As an example, after the utilities package is loaded and you desire to draw a line, the following sequence of BASIC instructions could be executed:

U=USR(0)	Return the communications area
POKE U+1,X0	Provide the beginning X coordinate
POKE U+3,Y0	Provide the beginning Y coordinate
POKE U+5,X1	Provide the ending X coordinate
POKE U+7,Y1	Provide the ending Y coordinate
V=USR(4)	Draw the line (Current speed is approximately 13 vectors/second)

The complete E/RAM package is available for only \$349.95, and includes case, power supply, cables, software cassette, and complete documentation.

To order, or for further details, write or call:

Line 200, and the DIM statement in Line 210. Line 390 can be adjusted (with an OR or two) to run command files with other /EXTs.

If you have the Radio Shack lowercase mod, you have probably discovered that it screws up the codes stored in the video screen memory locations. The problem is that, until a lowercase driver is loaded, the ASCII codes read 64 less than they should. So PEEKing the video memory yields control codes instead of character codes. The fix for DIRPICK is:

```
280 X=PEEK(L+C): IF X<32 THEN
X=X+64
285 A$(P)=A$(P)+CHR$(X)
```

This will work with correct or

screwed up codes in memory.

Most of your BASIC programs can be kludged to return you to DIRPICK. Many /CMD programs will return you to BASIC leaving DIRPICK intact. Enter RUN and you're back in business. I know it works with DIRCHECK. Just think, you could run for days without having to keyboard more than a few numbers.

One colleague asked me why I didn't call it MENU since it is a menu program. The problem is that every third disk has a program called MENU, so I called it DIRPICK. But if you like, you can call it MENU... or you can call it Rey, or you can call it Jay... ■

Example 2.

At last...the Typewriter Interface!

Turn your electric typewriter into a low cost, high quality hard copy printer. 1 Year Warranty

Dynatyper—the patented* ROI—I/O Pak is fast becoming the industry standard for typewriter output. Why? Because:

1. It takes 2 minutes to initially install and 5 seconds to remove or replace.
2. You do not have to modify your typewriter. All factory warranties and maintenance agreements on your typewriter will be honored.
3. You can use it with all powered carriage return typewriters that have U.S. keyboard. Our Model I works with all non Selectrics and our Model II works with Selectrics. Conversion between models takes 2 minutes and the kit (26 plungers) is available for a nominal charge.
4. You don't have to lug around a bulky printer when you travel. If there is a typewriter at your destination, you can install the light (3 lbs.) I/O Pak in just 2 minutes.
5. Same interface for TRS-80, Apple and GPIB. Centronics and Pet compatible interfaces are available in third quarter 1980. Electric pencil available.
6. Delivery: Stock to two weeks. Price: \$499. for the complete system, FOB Rochester, Domestic.

Over 1000 in operation today. VISA and MasterCard accepted. Call Ken Yanicky at 716-385-4336.

Years ago, when the topic of computers came up, most people visualized a rack full of fleshing lights accompanied by weird electronic sounds. With the present trend in electronics bringing computers into the home, that illusion has dissipated.

Though the visual display can be entertaining, to me it is something akin to playing pinball without the bells, thumps and buzzer.

Adding Sound

By applying techniques extracted from the TRS-80 assembly language manual and the *Level II Reference Manual*, the procedure outlined here adds sound through your 80's cassette I/O port to an external amplifier.

The program is limited only by the user's imagination. Through manipulation of frequency, tone duration and multiple tones, one can bring life to myriad game programs, or simply signal the end of a long program.

The procedure works as follows (Listing 1). A one-byte count, $0 < n < FFH$ (255 decimal)

is POKED into memory location 7FFDH (32765 decimal) for duration and 7FEEH (32766 decimal) for frequency.

Upon call to the USR routine, the C register is loaded with the contents of the memory location specified by the index register (IX + 0). This controls the duration of the outer loop.

The B register is then loaded with the count specified by the index register (IX + 1) to control inner loop 2 (frequency). A count of one is loaded in the A register and shifted out to the cassette

port (FF) for the first half of the cycle, while decrementing the B register.

When the count in the B register reaches zero, control passes to loop 3. With the B register again loaded with the frequency count, a 2 is loaded in the A register and shifted out the cassette port for the second half of the cycle.

When loop 3 falls through, the C register is decremented and the contents checked for zero. If the count is greater than zero, the program jumps to the begin-

ning of the subroutine and the process starts over. When the C register reaches zero, loop 1 falls through and a return is made back to the BASIC program that called it.

I've included the machine language routine to illustrate the

Flow Chart

Complete LNW Expansion Interfaces

The LNW System Expansion offers one of the best alternatives to the Radio Shack interface, and now with a complete kit from COMPUTEX it's even better. We studied the I.C. market for three months and averaged the cost of procuring components for the LNW board. We found that by shipping for the best prices from over 10 vendors, the LNW board could be assembled for an average parts cost of \$253.00 not including shipping cost. COMPUTEX saves you time and money by offering a complete LNW system expansion kit for \$249.00 (less RAM and Cassette Relay). We even include all I.C. Sockets. Not only is the LNW/COMPUTEX expansion interface better electrically, we've made it the best. TRS80 (tm) expansion interface by designing and building a custom cabinet for it.

* TRS80 is a trademark of Tandy Corp.

The CPT Cabinets for the LNW interfaces are made of quality birch wood, custom finished in a light walnut color then trimmed around the front by aluminum molding. Two cabinets are available.

The CPT1000 cabinet will hold the LNW Board, and power supplies for both keyboard and the LNW system expansion. Measurements 15" wide x 13 1/2" deep x 5 1/2" tall. . . . \$99.95

The CPT2000 cabinet has all of the features of the CPT1000 but will hold up to two disk drives, power supplies, and even has a cut out for a muffin fan. The CPT2000 has a removable front panel that comes with cutouts for 1 or 2 disk drives or with no cutouts. The CPT2000 measures 15 1/2" wide x 13 1/2" deep x 3 1/2" tall. . . . \$99.95

LNW System Expansion Kit	\$249.00
(Assembled)	349.00
CPT1000 Cabinet	99.95
CPT2000 Cabinet	99.95
LNW System Expansion Board	89.00
T1 (Radio Shack) Transformer for LNW	21.95
Keyboard to FIVE Cable	10.95
Muffin Fan for CPT2000	14.95

(Individual components available also)

All products sold by COMPUTEX are 100% guaranteed for 90 days. A 1 year 100% guarantee is available on all of our hardware for an additional 10% of the items purchase price.

VISA/Master Card accepted (add 4% to total) ALL ORDERS SHIPPED WITHIN 6 DAYS OF ORDER SHIPPING - UPS insured (call for rate) Personal checks held 2 weeks prior to shipping.

C.O.D.'s accepted (may require 10% down)

Disk Drives

COMPUTEX reviewed all major disk drives available on the market prior to becoming a dealer for anyone. The drive we selected to market is the Tandon TM 100 Series. Compare their specifications and features and we think you'll agree that the Tandon TM 100 Series of Disk Drives are the best available.

Tandon is the leading designer and supplier of read/write heads for most other disk drive manufacturers. Track to Track access time of 5 milliseconds. No head load time required, most others take 35 M S. Read / write head guaranteed for 20,000 hours. Quieter than most other disk drives.

First successful manufacturer of double headed drives.

Model	Description	Base Price	With Supply Case
TM100-1	40 Track Single Headed	\$225.00	\$299.55
TM100-2	40 Track Double Headed	325.00	399.05
TM100-3	80 Track Single Headed	375.00	449.00
TM100-4	80 Track Double Headed	475.00	549.00

All above drives will operate single or double density. For those that still insist on MPI and Shugart.

Model	Description	Base Price	With Supply Case
MP1551-40	Track Single Headed	\$275.00	349.00
MP1551-40	Track Double Sided	375.00	449.00
Shugart SA400-35	Track Single Sided	265.00	329.00

Computex carries or can supply most any TRS80 System or peripherals. (Call for quotes)

Z-80 commands used to produce the sounds. To implement the program one uses the technique illustrated in the *Level II Reference Manual* for storing a USR routine in a string (Program Listing 2). This needs to be done only once during the program. By POKEing a count into memory locations 32765 and 32766 (0<N<255) and calling the USR routine, one can generate tones

through the cassette I/O.

The program in Listing 2 contains a demo routine in the first few lines. To use the sound routine in your program, delete up to 31999 and follow the aforementioned steps to call the routine.

If you do not have a suitable amplifier to use with the TRS-80, you could use the circuit depicted in Fig. 1.■

TRS-80 COMPATIBLE DISK DRIVES AT GREAT DISCOUNTS!!

- These MPI drives are completely compatible with Radio Shack's and may be mixed and matched! (i.e. you may use Radio Shack drives and MPI's together with no problems! They are totally compatible with TRSDOS, NEWDOS, or any other TRS 80 software!)
- These MPI's have doors that close and keep dust out!
- These MPI's have auto diskette eject!
- These drives are one of the fastest on the market: 5 miliseconds versus Radio Shack's 40 miliseconds!
- These drives come complete with power supply and case and are ready to use immediately. They are compatible with Radio Shack's disk cable or you may purchase our cable
- Dual drive is same as two drives but uses only one diskette! Save money on expensive diskettes! It may be used as drive 0 and 1, 1 and 2 or 2 and 3! This is a fantastic buy!
- **SAVE \$116 (Single drive) or \$451 (Dual drive)**
Over Radio Shack's single drive prices!

microcomputing™

bookshelf

3 new books from the editors of KB & 80 Microcomputing

Some
of the
Best
from

80 microcomputing

● **40 COMPUTER GAMES**—BK7381—Forty games in all in nine different categories. Games for large and small systems, and even a section on calculator games. Many versions of BASIC used and a wide variety of systems represented. A must for the serious computer gamesman. \$7.95*

● **SOME OF THE BEST FROM KILOBAUD/MICROCOMPUTING**—BK7311—A collection of the best articles that have recently appeared in Kilobaud/MICROCOMPUTING. Included is material on the TRS-80 and PET systems, CP/M, the 8080/8085/Z80 chips, the ASR-33 terminal. Data base management, word processing, text editors and file structures are covered too. Programming techniques and hardware construction projects for modems, high speed cassette interfaces and TVTs are also included in this large format, 200 plus page edition. \$10.95.*

● **UNDERSTANDING AND PROGRAMMING MICROCOMPUTERS**—BK7382—A valuable addition to your computing library. This two part text includes the best articles that have appeared in 73 and Kilobaud Microcomputing magazines on the hardware and software aspects of the new microcomputing hobby. Well known authors and well structured text helps the reader get involved in America's fastest growing hobby. \$10.95*

OTHER BOOKS

● **INSIDE LEVEL II**—BK1183—For machine language programmers! This is a comprehensive reference guide to the Level II ROMs, allowing easy utilization of the sophisticated routines they contain. It concisely explains set-ups, calling sequences, variable passage and I/O routines. Part II presents an entirely new composite program structure which unloads under the SYSTEM command and executes in both BASIC and machine code with the speed and efficiency of a compiler. Special consideration is given to disk systems. \$15.95.*

● **TRS-80 DISK AND OTHER MYSTERIES**—BK1181—by Harvard C. Pennington. This is the definitive work on the TRS-80 disk system. It is full of detailed "How to" information with examples, samples and in-depth explanations suitable for beginners and professionals alike. The recovery of one lost file is worth the price alone. \$22.50.*

● **PROGRAMMING THE Z-80**—BK1122—by Rodnay Zaks. Here is assembly language programming for the Z-80 presented as a progressive, step-by-step course. This book is both an educational text and a self-contained reference book, useful to both the beginning and the experienced programmer who wish to learn about the Z-80. Exercises to test the reader are included. \$14.95.*

● **LEARNING LEVEL II**—BK1175—by David Lien. Written for the TRS-80, this book on Level II BASIC explores every important BASIC capability. Updates are included for students of the Level I User's Manual; sections on using the Editor, dual cassette operation, printers, peripheral devices, and conversion of Level I to Level II. \$15.95.*

● **THE BASIC HANDBOOK**—BK1174—by David Lien. A virtual ENCYCLOPEDIA of BASIC, not favoring one computer over another, explaining over 250 BASIC words. If a computer doesn't have the capabilities of a needed word, other words or combinations can accomplish the same function. The HANDBOOK helps you get the most from your computer, be it "bottom of the line" micro, or oversized monster. \$14.95.*

● **TOOLS & TECHNIQUES FOR ELECTRONICS**—KB7348—An easy-to-understand book for the beginning kit builder as well as the experienced hobbyist. It has numerous pictures and descriptions for safe, correct ways to use basic and specialized tools for electronics projects, specialized metal working tools, and chemical aids used in repair shops. \$4.95*

* Use the order card in the back of this magazine or itemize your order on a separate piece of paper and mail to 80 Microcomputing Bookshelf • Peterborough NH 03456. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. All above add \$1.00 handling. Please allow 4-6 weeks for delivery. Questions regarding your order? Please write Customer Service at the above address.

FOR TOLL FREE ORDERING CALL 1-800-258-5473

GAMES

NEW!

● **MORE BASIC COMPUTER GAMES**—BK1182—edited by David H. Ahl. More fun in BASIC! 84 new games from the people who brought you *BASIC Computer Games*. Includes such favorites as Minotaur (battle the mythical beast) and Eliza (unload your troubles on the doctor at bargain rates). Complete with game description, listing and sample run. \$7.50.*

● **WHAT TO DO AFTER YOU HIT RETURN**—BK1071—PCC's first book of computer games... 48 different computer games you can play in BASIC... programs, descriptions, many illustrations. Lunar Landing, Hammurabi, King, Civel 2, Qubic 5, Taxman, Star Trek, Crash, Market, etc. \$10.95.*

● **BASIC COMPUTER GAMES**—BK1074—Okay, so once you get your computer and are running in BASIC, then what? Then you need some programs in BASIC, that's what. This book has 101 games for you from very simple to real buggers. You get the games, a description of the games, the listing to put in your computer and a sample run to show you how they work. Fun. Any one game will be worth more than the price of the book for the fun you and your family will have with it. \$7.50.*

MONEY-MAKING

● **HOW TO MAKE MONEY WITH COMPUTERS**—BK1003—In 10 information-packed chapters, Jerry Felsen describes more than 30 computer-related, money-making, high profit, low capital investment opportunities. \$15.00.*

● **HOW TO SELL ANYTHING TO ANYBODY**—BK7306—According to *The Guinness Book of World Records*, the author, Joe Girard, is "the world's greatest salesman." This book reveals how he made a fortune—and how you can, too. \$2.25.*

● **FREELANCE SOFTWARE PUBLISHING**—BK1179—by B. J. Korites. "This book is about money and how to make it by writing and selling computer programs," (author's foreword). If you have the skills to write a saleable program, you now need to acquire the skills to sell that program. This compact book comprehensively covers the entire publishing process and many aspects of software salesmanship. \$14.95.*

● **THE INCREDIBLE SECRET MONEY MACHINE**—BK1178—by Don Lancaster. A different kind of "cookbook" from Don Lancaster. Want to slash taxes? Get free vacations? Win at investments? Make money from something that you like to do? You'll find this book essential to give you the key insider details of what is really involved in starting up your own money machine. \$5.95.*

BUSINESS

● **PAYROLL WITH COST ACCOUNTING—IN BASIC**—BK1001—by L. Poole & M. Borchers, includes program listings with remarks, descriptions, discussions of the principle behind each program, file layouts, and a complete user's manual with step-by-step instructions, flowcharts, and simple reports and CRT displays. Payroll and cost accounting features include separate payrolls for up to 10 companies, time-tested interactive data entry, easy correction of data entry errors, job costing (labor of distribution), check printing with full deduction and pay detail, and 16 different printed reports, including W-2 and 941 (in CBASIC). \$20.00.*

● **SOME COMMON BASIC PROGRAMS**—BK1053—published by Adam Osborne & Associates, Inc. Perfect for non-technical computerists requiring ready-to-use programs. Business programs, plus miscellaneous programs. Invaluable for the user who is not an experienced programmer. All will operate in the stand-alone mode. \$12.50 paperback.*

● **PIMS: PERSONAL INFORMATION MANAGEMENT SYSTEM**—BK1009—Learn how to unleash the power of a personal computer for your own benefit in this ready-to-use data-base management program. \$11.95.*

*Use the order card in the back of this magazine or itemize your order on a separate piece of paper and mail to 80 Microcomputing Bookshelf • Peterborough NH 03458. Be sure to include check or detailed credit card information. No C.O.D. orders accepted. All above add \$1.00 handling. Please allow 4-6 weeks for delivery. Questions regarding your order? Please write Customer Service at the above address.

TRS-80 SERIAL I/O

- Can input into basic
- Can use LIST and LPRINT to output, or output continuously
- RS-232 compatible
- Can be used with or without the expansion bus
- Onboard switch selectable baud rates of 110, 150, 300, 600, 1200, 2400, parity or no parity add or even, 5 to 8 data bits, and 1 or 2 stop bits. O.T.R. line
- Requires +5, -12 VDC
- Board only \$19.95 Part No. 8010, with parts \$59.95 Part No. 8010A, assembled \$79.95 Part No. 8010C. No connectors provided, see below.

EIA/RS-232 connector Part No. DB25P \$6.00, with 9' 8 conductor cable \$10.95 Part No. DB25S

3' ribbon cable with attached connectors to fit TRS-80 and our serial board \$19.95 Part No. 3CAB40

COMPUCRUISE

\$129.95; with cruise control \$169.95

PAPER TIGER

Prints address labels, multicopy invoices and legal-size reports. Adjust the tractor width from 1-3/4 to 9-1/2 inches. 8 switch-selectable forms lengths. Print 6 or 8 lines per inch. Add the software-selectable full dot plotting graphics option to print illustrations, block letters, charts, graphs. Part No. 162172 \$899.95 • with graphics option Part No. 162173 \$1099.95

GAME PADDLES & SOUND

Includes: 2 game paddles, interface, software, speaker, power supply, full documentation including: schematics, theory of operation, and user guide; plus 2 games on cassette (Pong and Starship War). \$79.95 Complete Part No. 7922C

DIGICOM DATA PRODUCTS INC. Series 312 Acoustic Coupler

300 BAUD Originate, Part No. AC3122, \$219.95. 300 BAUD Answer, Part No. AC3122, \$219.95. 300 BAUD Answer/Originate, Part No. AC3123, \$229.95.

IBEX LIGHT PEN

Comes with Backgammon and Tic-Tac-Toe on tape with full documentation and program listing. Requires 9v. battery. Part No. IBEX \$19.95

SYSTEM EXPANSION from LNW Research

- Serial RS232C/20 mA I/O
- Floppy controller
- 32K bytes memory
- Parallel printer port
- Dual cassette port
- Real-time clock
- Screen printer bus
- Onboard power supply
- Software compatible
- Solder mask, silk screen, PC board and user manual, Part No. LNW80, \$69.95.

DISKETTES

Box of 10, 5" \$29.95, 8" \$39.95. Plastic box, holds 10 diskettes, 5" - \$4.50, 8" - \$6.50.

16K RAMS

For the Apple, TRS-80 or Pet \$8 each Part No. 4116/2117

LEEDEX MONITOR

12" Black and White • 12 MHz Bandwidth • Handsome Plastic Case • \$139.00

S-100 INTERFACE

AN S-100 bus Adapter—Motherboard for the TRS-80. Kit, Part No. HUH81DLXK, \$295.95. Assembled, Part No. HUH81DLXA, \$375.95.

NOW! A FULL SUPPORT SYSTEM FOR TRS-80

- 32K of RAM
- EPROM firmware
- Disk control
- Data acquisition
- Parallel I/O
- Serial I/O
- Plug into GPA's Motherboard.

GPA's quality design includes • 6-44 pin edge connectors • +5V, -5V, +12V, -12V external power supply required • Active termination. The Motherboard, Part No. GPA80, is only \$149.95.

TAKE ADVANTAGE OF GPA-EXPANSION CARDS FOR THE GPA80

Memory cards: Now with Fortran compilers available for your TRS-80, additional expansion memory is a must! Card with sockets only, Part No. GPA801, \$119.95. Card with 16K of 4116 Dynamic Ram, Part No. GPA802, \$224.95. Card with 32K of 4116 Dynamic Ram, Part No. GPA803, \$329.95. All cards come equipped with sockets to accommodate 32K of Ram.

EPROM firmware card. Put those valuable subroutines in firmware. Don't waste time loading and unloading tapes and disks. For 2708 or 2716 EPROMS, Part No. GPA806, \$79.95.

Serial I/O card. Here's what you've been asking for, a full serial terminal interface, with RS-232C or 20 mA. Current loop. Input/output capabilities. Part No. GPA807, \$79.95.

Parallel I/O Card. Control functions in the outside world, monitor and store real time events. Two parallel output ports. Dip switches select ports (0-254). Part No. GPA808, \$79.95.

FLOPPY DISK STORAGE BINDERS

Three ring binder comes with ten transparent plastic sleeves which accommodate either twenty, five-inch or ten, eight-inch floppy disks. Binder & 10 holders, Part No. 810B—\$9.95 • Extra holders, Part No. 810—69¢ each.

Three-ring binder with ten 5 1/4 inch jackets Part No. 510B—\$9.95 • Jackets only, fits standard 3-ring binders, Part No. 510—69¢ each.

DIGITAL CASSETTE

5 min. each side. Box of 10 \$9.95. Part No. C-5.

TRENDCOM PRINTER

TRENDCOM 200, Part No. TRC200 \$495.95 **Interface** for TRS-80, Part No. T80A \$49.95, For Apple II, Part No. TRCALL, \$75.95. For PET, NO TRCP2, \$79.95. For Scoccerer, TRC5R1 \$45.95.

SARGON: A Computer Chess Program

Features the complete program that won the 1978 West Coast Computer Faire Tournament. Part No. 00603 — TRS-80 Level II; Part No. 00604 — Apple II (24K). \$19.95

SPINWRITER MODELS 5510 and 5520

Features—EIA RS-232C/CCITT V24 Interface Standard • 55 Characters Per Second Maximum Print Rate • Impeccable Print Quality (OCR Quality) • Microprocessor Electronics • High Resolution Plotting/Graphing • Lowest Operating Noise Level • Self-Test Printing • Operator Engineered Control Panel • Prints Original and up to Seven Copies • NEC Information Systems new Model 5510 Receive Only and Model 5520 Keyboard Send/Receive SPINWRITER terminals are microprocessor controlled serial, impact terminals designed for remote printing applications where impeccable print quality is required. Model 5510 RQ, Part No. NECA30759 \$2795.95 • Model 5520 KSR, Part No. NECA30762 \$3095.95

NEW

the MAGIC WAND™
SPECIAL!.....\$299.95

NEW

the most powerful, most flexible, most reliable, most useable word processing software available for a CP/M* based TRS-80* model II.

MAGIC WAND™ can do more work in less time with high quality than any other product you can buy.

The command structure is simple, logical and complete. The programs are crash-proof and completely reliable.

The system is supported by what users say is the best user's manual ever produced for microcomputer software

FEATURES

- Full screen text editing
- Full text formatting commands
- Merging with external data files
- Up to 128 variables
- Conditional commands
- True proportional spacing

QUOTES FROM THE June, 1980 Microcomputing article "Super Word Processors" by Rod Hallen

"Of all the word processors I have used (and that includes a dozen or more), the Magic Wand is the most versatile. The Wand has almost all of the features of other processors, plus many new ones of its own. It measures up to even the word-processing software running on the largest mainframe computers."

"... Magic Wand is an outstanding example of the new levels of software that are being written for the small businessman, although I can't imagine a business of any size that couldn't use software of this quality."

MAGIC WAND - will also operate on Oasis based systems
- will operate on 16k but we recommend 32k for adequate operating memory
- is available on 5 1/4" and 8 diskettes

MAGIC WAND is a copyrighted program by Small Business Applications Inc., TRS-80 is a registered trademark of Tandy Corp., CP/M is a registered trademark of Digital Research Corp.

AIDS-III* by MTC

MODEL I...\$69.95

MODEL II...\$99.95

Introducing the latest addition to MTC's family of data management systems AIDS-III NO PROGRAMMING, easy to use COMPLETE PACKAGE including demonstration application, documentation and MAPS-III (see below)

- Up to 20 USER DEFINED FIELDS of either numeric or character type
- CHARACTER type fields may be any length (total up to 254 characters)
- NUMERIC type fields feature automatic formatting, rounding, decimal alignment and validation
- Full feature EDITING when adding or changing records
 - ENTER FIELD (can't type in more characters than specified)
 - BACKSPACE (delete last character typed)
 - DELETE FIELD contents
 - RESTORE FIELD contents
 - RIGHT JUSTIFY FIELD contents
 - SKIP FIELD (to next or previous field)
 - SKIP RECORD (to next or previous record)
- SORTING of records is MACHINE CODE assisted
 - 200 RECORDS (40 characters) in about 5 SECONDS
 - ANY COMBINATION of fields (including numerics) with each field in ascending or descending order
- SELECTION of records for Loading, Updating, Deleting, Printing and Saving is MACHINE CODE assisted
 - Specify up to 4 CRITERIA, each using one of 6 RELATIONAL COMPARISONS
 - LOAD or SAVE selected records using MULTIPLE FILES
 - Example Select records representing those people who live in the state of Colorado, but not in the city of Denver, whose last name begins with "F" and whose income exceeds \$9000.00
 - Example Select records representing those sales made to XYZ COMPANY that exceeds \$25.00, between the dates 03/15 and 04/10

MAPS-III (MTC AIDS PRINT SUBSYSTEM), included at no charge.

- COMPATIBLE with AIDS-II data files and AIDS subsystems.
- Move up from AIDS-II and EXPAND to 20 field capability WITHOUT REENTERING DATA
- AIDS-II (Model I or II) owners may UPGRADE FOR ONLY \$25.00.

*WARNING! This program is written in BASIC and can be listed in the normal manner. Modification of program code is NOT RECOMMENDED due to its extreme complexity

NEWDOS/80

by Apparat

Apparat's long-awaited successor to NEWDOS+ is here! This is not an enhanced version of NEWDOS, but a completely new product. Simplified DOS commands can be instantly executed from BASIC, even within a program, without disturbing the resident code. System options, such as password protection, number and type of disk drives, BREAK key enable/disable and lowercase modification recognition, can be quickly and easily changed. Five new random-access file types allow record lengths of up to 4096 bytes, and no FIELDing! A powerful CHAIN facility allows keyboard INPUTs to be read from a disk file. An improved RENUMBER facility permits groups of statements to be relocated within program code. Diskettes may even be designated as RUN-ONLY! Features all NEWDOS+ utilities (SUPERZAP 3.0, etc.) and much more! One MTC technical staff member said having NEWDOS/80 is "better than sex" (you'll have to judge for yourself!). Includes 180-page instruction manual and MTC QUE card.

NEWDOS/80.....\$149.95
MTC QUE Card only.....\$7.50
CALL REGARDING OUR NEWDOS+ UPGRADE PRICING

Complete for Model I with all utilities Plus exclusive MTC QUE card!

NEWDOS +
\$69⁹⁵ by Apparat

40 TRACK VERSION.....\$79.95

includes REF, RENUM, SUPERZAP, EDITOR/ASSEM., DISASSEM., DIRCHECK, and more! This is the original NEWDOS with all of Apparat's utility programs. Includes exclusive MTC QUE (Quick User Education) card.

MTC QUE Card only.....\$1.50

AIDS
CALCULATION SUBSYSTEM
(CALCS)

MTC's most popular AIDS subsystem. Use for report generation involving basic manipulation of numeric data. Features are:

- User-specified page title
- Columnar Headings
- Optional Indentation
- Columnar subtotals generated when there is a change in a user-specified column.
- User-specified Columnar Totals
- Columnar values computed using constants and/or column values
- Balance forward calculations (Ex: Gross sales equals previous gross sales + sale amount + sales tax).
- Use for accounting, inventory, financial and other numeric-based information systems.

MTC CALCS.....\$24.95
For Model II.....\$39.95

THE TOOL BOX

Any 3,
\$49.95

For Model II.....\$74.95

TDAM\$19.95
For Model II\$29.95
Includes MTC QUE Card!

Having trouble with RANDOM FILES? With MTC's Table-Driven Access Method (TDAM) you'll never fret over FIELDing again. No knowledge of random access files is required. Insert the TDAM "interpreter" into any BASIC program and type in a few DATA statements describing the information in your files. TDAM does the rest! Reads and writes fields and records of any type (even compresses a DATE field into 3 bytes!). Features automatic file buffer allocation/deallocation, memory buffering, sub-record blocking/deblocking, and handles up to 255 fields per record. Super fast and super simple! Complete with TDAM interpreter, instructions and demo program. Requires programming experience.

DIVERGE\$19.95
For Model II\$29.95

Compares two BASIC program files, showing the differences between them. Identifies & lists lines which have been inserted, deleted, & replaced. Use for version control.

REBUILD\$19.95
For Model II\$29.95

Reorganize programs for adding program code, faster execution, readability. Much more than simple renumbering. Rearrange groups of statements within a program - automatically updates references to line numbers. Use with SUPERSEDE and MINGLE for maximum effect.

SIFTER\$19.95
For Model II\$29.95

Twelve in-memory high-speed sorts for use in any BASIC program: stable, non-stable, with/without tags, for numeric or string data. Random File Sort included. Some sorts written in machine code. Includes sort subroutines, demo programs and instructions. Relocate as needed with REBUILD. Requires programming experience.

SHRINK\$19.95
For Model II\$29.95

Makes Every Byte Count! Make programs smaller and faster! Combines lines & removes unnecessary code including remarks, without altering program operation. Typically reduces program size 25% to 40%.

SUPERSEDE\$19.95
For Model II\$29.95

A "must have" for the professional programmer or the serious amateur. Probably one of the greatest time-savers available. Write programs in shorthand - change variable names - generate program documentation - use with REBUILD and MINGLE to build new programs from old ones.

MINGLE-II\$19.95
For Model II\$29.95

Merge up to 14 files (Program or Data) into a single file. Data files may be merged in ascending or descending sequence with the ordering based on a user-specified comparison field. A very handy utility for consolidating data files.

When It Comes To TRS-80 Add-on Memory...

LOBO Has It All.

LOBO DRIVES manufactures disk drive subsystems designed to provide TRS-80* users with a wide selection of low-cost, high-speed, efficient, mass-storage capabilities. Every LOBO DRIVES Memory System is thoroughly tested and burned-in to assure reliability and carries LOBO's unique one year, 100% parts/labor warranty.

Expansion and enhanced capabilities are key words in achieving full utilization of your computer system. LOBO DRIVES complete line of TRS-80 compatible disk drive subsystems is the ideal, cost effective way to provide the expansion capabilities you need to meet your system growth requirements.

*TRS-80 is a trademark of Radio Shack
A Tandy Company

TRS-80 MODEL II

LOBO DRIVES makes expanding your TRS-80 Model II very, very easy. Now you can add more floppy disk memory at less cost. And LOBO can provide you with up to 40 MBytes of fixed disk Winchester technology storage capacity that is completely software compatible to your Model II.

- Model 800-850 8-inch dual Floppy Systems
- Model 1850 Dual Floppy/Fixed Disk Memory System

MODEL 1850 DUAL FIXED/FLOPPY DISK MEMORY SYSTEM

LOBO DRIVES has combined a 5 or 10 MByte Winchester technology fixed disk and 1.6 MByte double-sided, double-density floppy disk drive in one cabinet. The unique controller can accommodate two dual units. Now you can have the speed and reliability of fixed disk, with built-in floppy back-up.

- 5 or 10 MByte Fixed Disk Capacity
- Up to 1.6 MByte Floppy Disk Capacity
- Winchester Reliability
- Software Compatible

MODEL 800/850 DUAL FLOPPY DISK MEMORY SYSTEM

Complete with stylized cabinet, power supply controller, interface and cables, the Model 800/850 Dual Floppy Disk Memory System is the ideal way for the serious user to expand his disk-based TRS-80.

- Up to 3.2 MBytes Capacity
- Single-side, Single or Double Density
- Double-Side, Single or Double Density
- Complete Software Compatibility
- High Speed Access Time

MODEL 400 5 1/4-INCH FLOPPY DISK MEMORY SYSTEM

A low-cost, high performance, software-compatible Floppy Disk for TRS-80 Model I users.

- Up to 220 KBytes Capacity
- Single/Double Density
- Soft Sector Format
- 298 Msec Access Time

MODEL LX80 EXPANSION INTERFACE

LOBO DRIVE's new Model LX80 expansion interface enhances system performance by expanding disk storage capacities beyond 40 MBytes, adding a second serial port and facilities for an additional 32 K RAM. The LX80 permits you to achieve the maximum expansion capabilities of your TRS-80.

- Connects Directly to Keyboard
- Two Serial Ports (optional)
- One Parallel Expansion Port (standard)
- One Parallel "Centronics" Printer Port (Standard)
- Supports Double Density 5 1/4 and 8 inch Floppies
- Separate Port for 8-inch Floppies
- Switch for Overriding Keyboard ROM
- Separate Port for Fixed Disk Drives

MODEL 950 DUAL FLOPPY/FIXED DISK MEMORY SYSTEM

LOBO combines the outstanding capabilities of the latest technological breakthrough in disk drives, the Shugart Technology 5 1/4-inch Micro Winchester fixed disk drive with the proven reliability of the Model 400/450 Floppy Disk in one

easy-to-use cabinet.

- The Storage Capacity of 16 double-sided, double-density Mini-Floppies
- Built-in Floppy Disk Back-up
- 170 Msec Average Access Time
- Sealed Environment/Winchester Reliability

NOTE: Limited Availability in the Fall of 1980

See your nearest dealer, call, or write for the complete LOBO DRIVES story and find out just how competitively priced a quality drive can be.

Pump Up Your TRS-80 with the ES/F Mass Storage System

THESE FACTS SPEAK FOR THEMSELVES!

	CASSETTE	ES/F	MINI-DISK
SPEED (Seconds to load "Blackjack")	56	6 (5" wafer)	6½
CAPACITY (thousands of bytes)	38 (C-20)	64 (75" wafer)	59 (TRSDOS)
RELIABILITY (Designed for digital data?)	NO	YES	YES
SYSTEM COST (First unit plus interface)	\$60	\$250	\$800
MEDIA COST (in quantities of ten)	\$3.10 cassette	\$3.00 wafer	\$3.20 disk

Let's face it. Cassette players were not designed to store digital data and programs. That's why we designed a digital storage system using a continuous tape loop: the Exatron Stringy/Floppy (ES/F) and the Wafer. There's no expensive interface to buy—the ES/F comes ready to pump up your TRS-80.*

Once your TRS-80* is pumped up by our ES/F . . . you won't want to deflate it. We're so sure, that we offer an unconditional 30-day money-back guarantee and a one-year limited warranty. Over 2,000 TRS-80* owners have met the wafer . . . why don't you?
